Dear Directors,

Pursuant to Chapter 216, *Florida Statutes*, our Long Range Program Plan (LRPP) for the Division of Administrative Hearings is submitted in the format prescribed in the LRPP instructions. The information provided electronically and contained herein is a true and accurate presentation of our mission, goals, objectives and measures for Fiscal Year 2014-15 through Fiscal Year 2018-2019. The link to the LRPP, located on the Florida Fiscal Portal, may be found on the Division's web site at: http://www.doah.state.fl.us/ALJ/Reports.asp

Sincerely,

Robert S. Cohen

Director and Chief Judge

DIVISION OF ADMINISTRATIVE HEARINGS

LONG RANGE PROGRAM PLAN

FISCAL YEAR 2014-2015 THROUGH FISCAL YEAR 2018-2019

September 30, 2013

MISSION OF THE DIVISION OF ADMINISTRATIVE HEARINGS

Impartially Adjudicate Disputes

To provide a uniform and impartial forum for the trial and resolution of disputes between private citizens and organizations and agencies of the state in an efficient and timely manner.

To maintain a statewide mediation and adjudication system for the efficient and timely resolution of disputed workers' compensation claims.

GOAL OF THE DIVISION OF ADMINISTRATIVE HEARINGS

Improve the statewide adjudication and mediation processes.

OBJECTIVES OF THE DIVISION OF ADMINISTRATIVE HEARINGS

GOAL 1: Improve the statewide adjudication and mediation processes.

OBJECTIVE 1A: To increase the number of administrative law cases that can reasonably be closed within 120 days after filing to a rate greater than the baseline year rate and maintain that rate increase throughout the planning period.

OBJECTIVE 1B: To increase the number of petitions for benefits that can reasonably be closed within the statutory timeframe to a rate greater than the baseline year rate and maintain that rate increase throughout the planning period.

SERVICE OUTCOMES AND PERFORMANCE PROJECTIONS TABLES OF THE DIVISION OF ADMINISTRATIVE HEARINGS

GOAL 1: Improve the statewide adjudication and mediation processes.

OBJECTIVE 1A: To increase the number of administrative law cases that can reasonably be closed within

120 days after filing to a rate greater than the baseline year rate and maintain that rate

increase throughout the planning period.

OUTCOME: Percent of cases closed within 120 days after filing.

Baseline FY 1998-99	FY 2014-15	FY 2015-16	FY 2016-17	FY 2017-18	FY 2018-19
61%	76%	76%	76%	76%	76%

OBJECTIVE 1B: To increase the number of petitions for benefits that can reasonably be closed within

the statutory timeframe to a rate greater than the baseline year rate and maintain that

rate increase throughout the planning period.

OUTCOME: Percent of petitions closed within the statutory timeframe.

DIVISION OF ADMINISTRATIVE HEARINGS

TRENDS AND CONDITIONS STATEMENT

The Division of Administrative Hearings (DOAH) is unique because it is a small, independent, quasi-judicial agency established within the Department of Management Services for the provision of support services only. The Division has only two programs (services): Adjudication of Disputes and Workers' Compensation Appeals. These programs are mutually exclusive and equally important to the State of Florida. Hence, they are equally weighted as the Division's "number one" priority. No substantive revisions to the Division's programs or current structure are recommended over the five-year planning period.

With regard to the Adjudication of Disputes program, the Division of Administrative Hearings provides independent Administrative Law Judges (ALJs) to conduct hearings pursuant to Sections 120.569 and 120.57(1), Florida Statutes, pursuant to other law, and under contract with governmental entities. The judges are not subject to control, supervision, or direction by any party or any department or commission of state government.

On October 1, 2001, the Workers' Compensation Appeals Program, Office of the Judges of Compensation Claims (OJCC), was transferred to the Division of Administrative Hearings from the Department of Labor and Employment Security. The primary responsibility of this program is to dispose of disputed workers' compensation claims through mediation and adjudication. The Office of the Judges of Compensation Claims is created in Section 440.45(1), Florida Statutes. The conducting of pre-trial and final hearings is mandated in Section 440.25, Florida Statutes, and the mandatory mediation program is outlined also in Section 440.25, Florida Statutes. Other duties of the Office of the Judges of Compensation Claims are detailed throughout Chapter 440, Florida Statutes.

In 2012, the Division continued its implementation of the electronic-filing applications. Effective July 1, 2011, under chapter 2011-208, section 7, Laws of Florida, electronic filing became mandatory for all parties, except those representing themselves in administrative law or workers' compensation cases. In 2012, for the OJCC, 479,832 documents were electronically filed by practitioners. For the Adjudication of Disputes, 31,744 documents were electronically filed. Electronic service of orders issued by the OJCC and by Administrative Law Judges has been implemented in all cases where the parties of record have provided email addresses to the Division. The savings to the users of electronic filing, in terms of paper, postage, and time, has already registered in the tens of thousands of dollars.

Under section 120.53(2)(a), Florida Statutes, all state agencies now have an option to electronically transmit their agency orders to the Division's website for indexing purposes. To date, nine agencies have taken advantage of this service and their past

orders are now available on the DOAH website for the public to view. These include the Department of Agriculture and Consumer Services, Department of Children and Families, Department of Economic Opportunity, Department of Environmental Protection, Department of Education, Department of Business and Professional Regulation, Department of Highway Safety and Motor Vehicles, Department of Health, and the Office of the Governor. It is anticipated that additional agencies will take advantage of this service in the coming year.

The primary outcome measure for the Adjudication of Disputes service relates to the timeliness of the adjudication process. In Fiscal Year (FY) 2012-13, the Division closed 82% of its cases within 120 days after filing, and scheduled for hearing 90% of its cases within 90 days after filing. This program continues to supply high-quality adjudication of disputes pursuant to the Administrative Procedure Act, and cases move through the Division at a far faster rate than through the state court system. The FY 2014-15 requested standards equal prior-year approved standards.

The primary outcome measure for the Workers' Compensation Appeals service also relates to the timeliness of the adjudication process. In FY 2012-13, the OJCC closed 92% of petitions within the statutory timeframe of 210 days. Due to continued efforts in data maintenance, timely docketing of orders, and added database functionality, this program's performance has significantly improved over the last few years. The FY 2014-15 requested standards equal prior-year approved standards.

The Mediation activity also improved its performance in FY 2012-13. The resolution rate increased to 54%. Mediation timeliness remained constant; 97% of mediations were held within 130 days, and all of the mediators achieved the goal of holding mediations within an average of 130 days.

Funds and positions appropriated to the Division do not impact demand. Demand for the Adjudication of Disputes program is defined as the number of cases filed by the parties to administrative proceedings, including those cases that are carried forward from the preceding fiscal year. Demand for the Workers' Compensation Appeals program is defined as the number of petitions for benefits filed, including those petitions that are carried forward from the preceding fiscal year. Parties will continue to file cases at a rate independent of the Division's funding and workforce levels. The Division has no control over the demand for its services.

The Division is not aware of any significant policy changes that could affect its FY 2014-15 Legislative Budget Request (LBR). There are no requested changes in the Division's approved programs, services or activities that would require substantive legislative action, including elimination of or combining its programs, services, or activities.

The Division is not aware of any audits, studies or task forces in progress that are related to either of its services.

ASSESSMENT OF PERFORMANCE FOR APPROVED PERFORMANCE MEASURES -LRPP EXHIBIT III

Exhibit III: PERFORMANCE MEASURE ASSESSMENT				
Program: Adjudic Service/Budget Entity	vision of Administrative ation of Disputes : Adjudication of Dispu e of Cases Closed		<u></u>	
Performance Assess	sment of <u>Outcome</u> Measusment of <u>Output</u> Measure A Performance Standards	re Revision o Deletion o		
Approved Standard	Actual Performance Results	Difference (Over/Under)	Percentage Difference	
6,000	4,226	1,774	(30%)	
Factors Accounting for the Difference: Internal Factors (check all that apply): Personnel Factors Staff Capacity Competing Priorities Level of Training Previous Estimate Incorrect Other (Identify) Explanation: The estimate of the number of cases closed is based upon the number of cases filed with the Division of Administrative Hearings (DOAH). The number of cases filed decreased by 33% from 6,160 in FY 11-12 to 4,138 in FY 12-13. External Factors (check all that apply): Resources Unavailable Technological Problems Legal/Legislative Change Natural Disaster Target Population Change Other (Identify) - Decrease This Program/Service Cannot Fix The Problem in demand Current Laws Are Working Against The Agency Mission Explanation:				
For the past several fiscal years, the number of cases filed with DOAH averaged about 6,000 annually. Approximately 30-35% of these were child support enforcement cases referred by the Department of Revenue. However, beginning in December 2011, the number of child support cases decreased due to internal factors at the Department of Revenue which resulted in that agency sending fewer child support cases to DOAH and more of these cases to the Circuit Court. Therefore, overall the number of cases filed with DOAH fell from 6,160 in FY 11-12 to 4,138 in FY 12-13. The number of child support enforcement cases declined 84% from 2,194 in FY 11-12 to only 349 in FY 12-13. The decrease in child support enforcement cases was the main factor in the overall decrease in the number of cases filed with DOAH.

Legislature is dependent the parties, (2) the requiparties are not denied the hearing and to present retime requirements in ce. While a large majority of ability to actually hear a availability of Division party, counsel for a part	of cases can be initially so a case as actually schedule personnel to conduct the lay, or crucial witnesses; the discovery" and otherwise	fort by the Division, the United States Constitution includes the ability the exhibits and witnesses), the duled for hearing with the dis often compromised, mearing, but rather by the elinability of the parties,	parties, and counsel for ons to ensure that o properly prepare for and (3) Legislative in 90 days of filing, the not by the lack of a unavailability of a due to the complexity

Additionally, once a case actually goes to hearing, Chapter 120, Florida Statutes, provides that the parties may file proposed orders for consideration of the administrative law judge in preparing his or her order. Before this is done, due process requires that the parties be given time to have a transcript of the hearing prepared and filed, a process which can take anywhere from ten days to months, depending on the complexity of the case. The time parties need to prepare their proposed orders can also take from ten days (the minimum allowed by rule) to months, again depending on the complexity of the case. Finally, in professional licensure cases, many of the licensees request a delay in scheduling their hearings (and thus closing their cases) until any criminal charges against them have been resolved in another forum. All these factors impact the ability of the Division to quickly schedule hearings and close cases. **Management Efforts to Address Differences/Problems** (check all that apply): **Training** Technology Other (Identify): -Personnel Implementation of internal policies **Recommendations:** The Division began operating under "Performance-Based Program Budgeting" principles on July 1, 2000 and instituted new policies that require more expeditious scheduling of hearings and closure of cases. The Division's performance has significantly improved over the last twelve fiscal years and efficiencies most likely have been maximized. This maximization of efficiencies, combined with a decreased staffing level of Administrative Law Judge positions during the last few years, supports the Division's request that this measure's FY 2014-15 standard be maintained at 77%.

DIVISION OF ADMINISTRATIVE HEARINGS

PERFORMANCE MEASURE VALIDITY AND RELIABILITY - LRPP EXHIBIT IV

LRPP EXHIBIT IV: Performance Measure Validity and Reliability Department: DMS/Division of Administrative Hearings Program: Adjudication of Disputes Service/Budget Entity: Adjudication of Disputes Measure: Percent of Cases Closed Within 120 Days After Filing Action (check one): Requesting revision to approved performance measure. Change in data sources or measurement methodologies. Requesting new measure. Backup for performance measure.

Data Sources and Methodology:

The Division's electronic database, entitled the "Case Management System" (CMS), is the data source for this measure, and an automated computer program is utilized to provide the data for calculating the standard. The percentage is calculated by dividing the number of cases closed within 120 days after filing in a specified year by the total number of cases filed during that same period.

The FY 2012-13 standard of 82% was calculated by dividing the number of cases closed within 120 days after filing (3,407) by the total number of cases filed (4,138) during the period March 1, 2012 through February 28, 2013. This time period is used to determine all of the output and outcome standards for this service so that all indicators are based on the same group of cases. If data were collected for the most recently completed fiscal year (FY 2012-13) instead, some cases filed during the last four months of that year that also closed within 120 days, but after June 30, would not be captured. For example, a case filed on June 29 that was closed on October 19 (within 120 days) would not be counted (even though it met the criterion) because it was closed after the fiscal year ended on June 30 and after submission of the Long Range Program Plan in September, 2013.

Validity:

Validity refers to the fit between an operational definition and the concept it is purported to measure. This indicator is a valid measure of the outcome because it meets the criteria of two of the three types of statistical validation: (1) subjective validation (face validity), and (2) criterion-related validation. First, on the face of it, this indicator appears to measure the concept it is intended to measure (face validity). Second, the content or apparent meaning of this measure is not as important as its usefulness as an indicator of the outcome (criterion-related validity). The test of this type of validity is the ability of this measure to classify or group data in terms of a single criterion (percent of cases closed within 120 days after filing).

This indicator is a valid measure of how timely the Division is closing its cases. Most citizens and agencies of the state are interested in resolving their disputes as quickly as

possible. Hence, this is a reasonable and sensible method of assessing performance against targeted time frames.

The Division's CMS database, the data source for this measure, is also valid. It has evolved to its present state over the last 29 years, and is the basis for the generation of numerous statistical reports on the Division's operations. To validate the accuracy of the CMS database, a statistically valid sample could be drawn from the case files. For example, a systematic random sample of computerized data on cases could be validated against the actual case files.

Reliability:

Reliability assessment is essentially a matter of checking for consistency; if a measure yields the same result time after time, then it is free of random error. This indicator is a reliable measure of the Division's outcome because of its test-retest and intercoder reliability. The test-retest procedure is the simplest method for assessing reliability and involves measuring the outcome (the percent of cases closed within 120 days after filing) on two separate occasions. The intercoder method involves examining the extent to which different persons using the same measurement procedures get equivalent results.

When any action is taken on a case (including case filing and closure), or when any case-related documentation is received or disseminated, an entry is made on the case's official docket, which is part of the CMS database. The Clerk's Office has incorporated a comprehensive system of checks and balances to insure that the Division's electronic and hard copy case files are up-to-date, accurate, and complete. Hence, this reliable outcome measure will not vary over time. Each time a measurement is taken, the quality of the results will be consistent.

LRPP EXHIBIT IV: Performance Measure Validity and Reliability Department: DMS/Division of Administrative Hearings Program: Adjudication of Disputes Service/Budget Entity: Adjudication of Disputes Measure: Percent of Cases Scheduled for Hearing Within 90 Days After Filing Action (check one): Requesting revision to approved performance measure. Change in data sources or measurement methodologies. Requesting new measure. Backup for performance measure.

Data Sources and Methodology:

The Division's electronic database, entitled the "Case Management System" (CMS), is the data source for this measure, and an automated computer program is utilized to provide the data for calculating the standard. The percentage is calculated by dividing the number of cases scheduled for hearing within 90 days after filing in a specified year by the total number of cases filed during that same period.

The FY 2012-13 standard of 90% was calculated by dividing the number of cases scheduled for hearing within 90 days after filing (3,744) by the total number of cases filed (4,138) during the period March 1, 2012 through February 28, 2013. This time period is used to determine all of the output and outcome standards for this service so that all indicators are based on the same group of cases. See the Exhibit IV for the outcome measure entitled "Percent of Cases Closed Within 120 Days After Filing" for the rationale supporting selection of this date range.

Validity:

Validity refers to the fit between an operational definition and the concept it is purported to measure. This indicator is a valid measure of the outcome because it meets the criteria of two of the three types of statistical validation: (1) subjective validation (face validity), and (2) criterion-related validation. First, on the face of it, this indicator appears to measure the concept it is intended to measure (face validity). Second, the content or apparent meaning of this measure is not as important as its usefulness as an indicator of the outcome (criterion-related validity). The test of this type of validity is the ability of this measure to classify or group data in terms of a single criterion (percent of cases scheduled for hearing within 90 days after filing).

This indicator is a valid measure of how timely the Division is scheduling hearings. Most citizens and agencies of the state are interested in resolving their disputes as quickly as possible. Hence, this is a reasonable and sensible method of assessing performance against targeted time frames.

The Division's CMS database, the data source for this measure, is also valid. It has evolved to its present state over the last 29 years, and is the basis for the generation of numerous statistical reports on the Division's operations. To validate the accuracy of the CMS database, a statistically valid sample could be drawn from the case files. For example, a systematic random sample of computerized data on cases could be validated against the actual case files.

Reliability:

Reliability assessment is essentially a matter of checking for consistency; if a measure yields the same result time after time, then it is free of random error. This indicator is a reliable measure of the Division's outcome because of its test-retest and intercoder reliability. The test-retest procedure is the simplest method for assessing reliability and involves measuring the outcome (the percent of cases scheduled for hearing within 90 days after filing) on two separate occasions. The intercoder method involves examining the extent to which different persons using the same measurement procedures get equivalent results.

When any action is taken on a case (including the scheduling of hearings), or when any case-related documentation is received or disseminated, an entry is made on the case's official docket, which is part of the CMS database. The Clerk's Office has incorporated a comprehensive system of checks and balances to insure that the Division's electronic and hard copy case files are up-to-date, accurate, and complete. Hence, this reliable outcome measure will not vary over time. Each time a measurement is taken, the quality of the results will be consistent.

LRPP EXHIBIT IV: Performance Measure Validity and Reliability Department: DMS/Division of Administrative Hearings **Adjudication of Disputes Program:** Service/Budget Entity: Adjudication of Disputes_ **Number of Cases Closed** Measure: **Action** (check one): Requesting revision to approved performance measure. Change in data sources or measurement methodologies. Requesting new measure. Backup for performance measure. **Data Sources and Methodology:** The Division's electronic database, entitled the "Case Management System" (CMS), is the data source for this measure. An automated computer program is utilized to provide a count of all cases closed during a given year (or any other time period specified). For the FY 2012-13 standard, data was collected for the period March 1, 2012 through February 28, 2013. This time period is used to determine all of the output and outcome standards for this service so that all indicators are based on the same group of cases. See the Exhibit IV for the outcome measure entitled "Percent of Cases Closed Within 120" Days After Filing" for the rationale supporting selection of this date range. The CMS program provided the count of 4,226 cases closed. Validity: Validity refers to the fit between an operational definition and the concept it is purported to measure. This indicator is a valid measure of the Division's output because it meets the criteria of two of the three types of statistical validation: (1) subjective validation (face validity), and (2) criterion-related validation. First, on the face of it, this indicator appears to measure the concept it is intended to measure (face validity). Second, the content or apparent meaning of this measure is not as important as its usefulness as an indicator of output (criterion-related validity). The test of this type of validity is the ability of this measure to classify or group data in terms of a single criterion (number of cases closed). The Division's CMS database, the data source for this measure, is also valid. It has evolved to its present state over the last 29 years, and is the basis for the generation of numerous statistical reports on the Division's operations. To validate the accuracy of the CMS database, a statistically valid sample could be drawn from the case files. For example, a systematic random sample of computerized data on cases could be validated

against the actual case files.

Reliability:
Reliability assessment is essentially a matter of checking for consistency; if a measure
yields the same result time after time, then it is free of random error. This indicator is a reliable measure of the Division's output because of its test-retest and intercoder
reliability. The test-retest procedure is the simplest method for assessing reliability and
involves measuring output (the number of cases closed) on two separate occasions. The
intercoder method involves examining the extent to which different persons using the
same measurement procedures get equivalent results.
When any action is taken on a case (including case closure), or when any case-related
documentation is received or disseminated, an entry is made on the case's official docket,
which is part of the CMS database. The Clerk's Office has incorporated a comprehensive
system of checks and balances to insure that the Division's electronic and hard copy case files are up-to-date, accurate, and complete. Hence, this reliable output measure will not
vary over time. Each time a measurement is taken, the quality of the results will be
consistent.

LRPP EXHIBIT IV: Performance Measure Validity and Reliability Department: DMS/Division of Administrative Hearings Program: Adjudication of Disputes Service/Budget Entity: Adjudication of Disputes Measure: Percent of Professional Licensure (PL) Cases Closed Within 120 Days After Filing Action (check one): Requesting revision to approved performance measure. Change in data sources or measurement methodologies. Requesting new measure. Backup for performance measure.

Data Sources and Methodology:

The Division's electronic database, entitled the "Case Management System" (CMS), is the data source for this measure, and an automated computer program is utilized to provide the data for calculating the standard. The percentage is calculated by dividing the number of professional licensure (PL) cases closed within 120 days after filing in a specified year by the total number of PL cases filed during that same period.

The FY 2012-13 standard of 69% was calculated by dividing the number of PL cases closed within 120 days after filing (218) by the total number of PL cases filed (317) during the period March 1, 2012 through February 28, 2013. This time period is used to determine all of the output and outcome standards for this service so that all indicators are based on the same group of cases. See the Exhibit IV for the outcome measure entitled "Percent of Cases Closed Within 120 Days After Filing" for the rationale supporting selection of this date range.

Validity:

Validity refers to the fit between an operational definition and the concept it is purported to measure. This indicator is a valid measure of the outcome because it meets the criteria of two of the three types of statistical validation: (1) subjective validation (face validity), and (2) criterion-related validation. First, on the face of it, this indicator appears to measure the concept it is intended to measure (face validity). Second, the content or apparent meaning of this measure is not as important as its usefulness as an indicator of the outcome (criterion-related validity). The test of this type of validity is the ability of this measure to classify or group data in terms of a single criterion (percent of PL cases closed within 120 days after filing).

This indicator is a valid measure of how timely the Division is closing its cases. Most citizens and agencies of the state are interested in resolving their disputes as quickly as possible. Hence, this is a reasonable and sensible method of assessing performance against targeted time frames.

The Division's CMS database, the data source for this measure, is also valid. It has evolved to its present state over the last 29 years, and is the basis for the generation of numerous statistical reports on the Division's operations. To validate the accuracy of the CMS database, a statistically valid sample could be drawn from the case files. For example, a systematic random sample of computerized data on cases could be validated against the actual case files.

Reliability:

Reliability assessment is essentially a matter of checking for consistency; if a measure yields the same result time after time, then it is free of random error. This indicator is a reliable measure of the Division's outcome because of its test-retest and intercoder reliability. The test-retest procedure is the simplest method for assessing reliability and involves measuring the outcome (the percent of PL cases closed within 120 days after filing) on two separate occasions. The intercoder method involves examining the extent to which different persons using the same measurement procedures get equivalent results.

When any action is taken on a case (including case filing and closure), or when any case-related documentation is received or disseminated, an entry is made on the case's official docket, which is part of the CMS database. The Clerk's Office has incorporated a comprehensive system of checks and balances to insure that the Division's electronic and hard copy case files are up-to-date, accurate, and complete. Hence, this reliable outcome measure will not vary over time. Each time a measurement is taken, the quality of the results will be consistent.

LRPP EXHIBIT IV: Performance Measure Validity and Reliability Department: DMS/Division of Administrative Hearings Program: Adjudication of Disputes Service/Budget Entity: Adjudication of Disputes Measure: Percent of Professional Licensure (PL) Cases Scheduled for Hearing Within 90 Days After Filing Action (check one): Requesting revision to approved performance measure. Change in data sources or measurement methodologies. Requesting new measure. Backup for performance measure.

Data Sources and Methodology:

The Division's electronic database, entitled the "Case Management System" (CMS), is the data source for this measure, and an automated computer program is utilized to provide the data for calculating the standard. The percentage is calculated by dividing the number of professional licensure (PL) cases scheduled for hearing within 90 days after filing in a specified year by the total number of PL cases filed during that same period.

The FY 2012-13 standard of 92% was calculated by dividing the number of PL cases scheduled for hearing within 90 days after filing (293) by the total number of PL cases filed (317) during the period March 1, 2012 through February 28, 2013. This time period is used to determine all of the output and outcome standards for this service so that all indicators are based on the same group of cases. See the Exhibit IV for the outcome measure entitled "Percent of Cases Closed Within 120 Days After Filing" for the rationale supporting selection of this date range.

Validity:

Validity refers to the fit between an operational definition and the concept it is purported to measure. This indicator is a valid measure of the outcome because it meets the criteria of two of the three types of statistical validation: (1) subjective validation (face validity), and (2) criterion-related validation. First, on the face of it, this indicator appears to measure the concept it is intended to measure (face validity). Second, the content or apparent meaning of this measure is not as important as its usefulness as an indicator of the outcome (criterion-related validity). The test of this type of validity is the ability of this measure to classify or group data in terms of a single criterion (percent of PL cases scheduled for hearing within 90 days after filing).

This indicator is a valid measure of how timely the Division is scheduling hearings. Most citizens and agencies of the state are interested in resolving their disputes as quickly as possible. Hence, this is a reasonable and sensible method of assessing performance against targeted time frames.

The Division's CMS database, the data source for this measure, is also valid. It has evolved to its present state over the last 29 years, and is the basis for the generation of numerous statistical reports on the Division's operations. To validate the accuracy of the CMS database, a statistically valid sample could be drawn from the case files. For example, a systematic random sample of computerized data on cases could be validated against the actual case files.

Reliability:

Reliability assessment is essentially a matter of checking for consistency; if a measure yields the same result time after time, then it is free of random error. This indicator is a reliable measure of the Division's outcome because of its test-retest and intercoder reliability. The test-retest procedure is the simplest method for assessing reliability and involves measuring the outcome (the percent of PL cases scheduled for hearing within 90 days after filing) on two separate occasions. The intercoder method involves examining the extent to which different persons using the same measurement procedures get equivalent results.

When any action is taken on a case (including the scheduling of hearings), or when any case-related documentation is received or disseminated, an entry is made on the case's official docket, which is part of the CMS database. The Clerk's Office has incorporated a comprehensive system of checks and balances to insure that the Division's electronic and hard copy case files are up-to-date, accurate, and complete. Hence, this reliable outcome measure will not vary over time. Each time a measurement is taken, the quality of the results will be consistent.

LRPP EXHIBIT IV: Performance Measure Validity and Reliability Department: DMS/Division of Administrative Hearings Program: Workers' Compensation Appeals - Judges of Compensation Claims Service/Budget Entity: Workers' Compensation Appeals - Judges of Compensation Claims Measure: Percent of Petitions Closed Within the Statutory Timeframe Action (check one): □ Requesting revision to approved performance measure. □ Change in data sources or measurement methodologies. □ Requesting new measure. □ Backup for performance measure.

Data Sources and Methodology:

The Division's electronic database, entitled the "Case Management System" (CMS), is the data source for this measure. An automated computer program is utilized to provide the data for calculating the standard. The percentage is calculated by dividing the number of petitions closed within the statutory timeframe in a specified year by the total number of petitions closed during that year.

Petitions for benefits are entered into the CMS upon receipt by the Clerk's Office. Data is recorded from the petition including the date it was filed. A petition can be closed several different ways: (1) voluntarily dismissed by the claimant, (2) dismissed by the judge, or (3) addressed by a disposition order (i.e. final merit, settlement, stipulation). As petitions are closed, staff enter the closing date into CMS. The FY 2012-13 standard of 92% was calculated by dividing the number of petitions closed within the statutory timeframe (54,537) by the number of petitions closed that year (59,432).

Validity:

Validity refers to the fit between an operational definition and the concept it is purported to measure. This indicator is a valid measure of the outcome because it meets the criteria of two of the three types of statistical validation: (1) subjective validation (face validity), and (2) criterion-related validation. First, on the face of it, this indicator appears to measure the concept it is intended to measure (face validity). Second, the content or apparent meaning of this measure is not as important as its usefulness as an indicator of the outcome (criterion-related validity). The test of this type of validity is the ability of this measure to classify or group data in terms of a single criterion (Percent of petitions closed within the statutory timeframe). This indicator is a valid measure of how timely the Office of the Judges of Compensation Claims is closing its cases.

Reliability:
Reliability assessment is essentially a matter of checking for consistency; if a measure
yields the same result time after time, then it is free of random error. This indicator is a
reliable measure of the Division's outcome because of its test-retest and intercoder
reliability. The test-retest procedure is the simplest method for assessing reliability and
involves measuring the outcome (the percent of petitions closed within the statutory
timeframe) on two separate occasions. The intercoder method involves examining the
extent to which different persons using the same measurement procedures get equivalent
results.
results.
As petitions are closed, judges' staff enter this data into the CMS database and it becomes
a permanent part of the record. Data are collected in a consistent manner, applying the
same methodology and can be duplicated to achieve the same results.

LRPP EXHIBIT IV: Performance Measure Validity and Reliability Department: DMS/Division of Administrative Hearings Program: Workers' Compensation Appeals - Judges of Compensation Claims Service/Budget Entity: Workers' Compensation Appeals - Judges of Compensation Claims Measure: Number of Petitions Closed Action (check one): Requesting revision to approved performance measure. Change in data sources or measurement methodologies. Requesting new measure. Backup for performance measure.

Data Sources and Methodology:

The Division's electronic database, entitled the "Case Management System" (CMS), is the data source for this measure. An automated computer program is utilized to provide a count of all petitions for benefits closed during a given year (or any other time period specified).

Petitions for benefits are entered into the "Case Management System" upon receipt by the Clerk's Office. Data from the petition is recorded including the filing date. A petition can be closed several different ways: (1) voluntarily dismissed by the claimant, (2) dismissed by the judge, or (3) addressed by a disposition order (i.e. final merit, settlement, stipulation). As petitions are closed, staff enter the data into CMS.

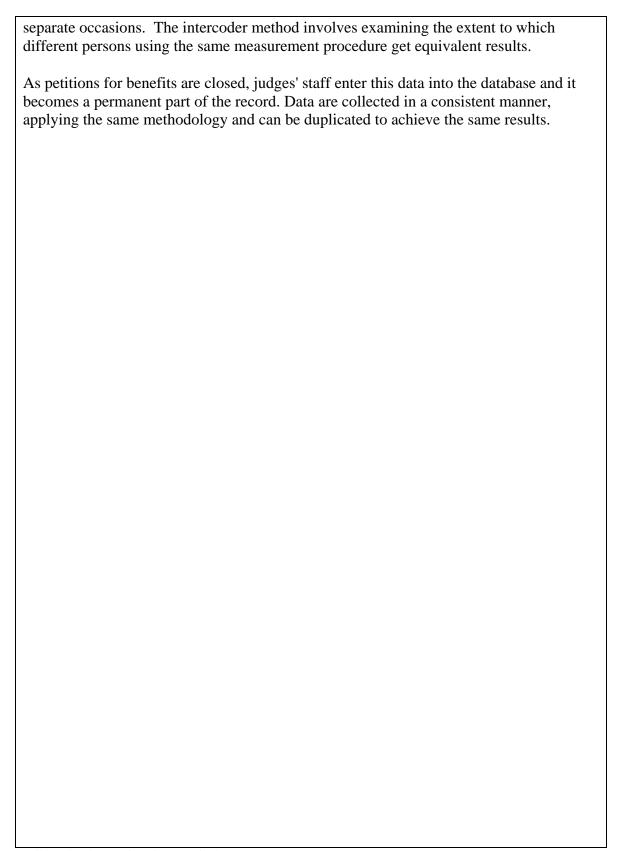

The CMS database provided the count of 59,432 petitions closed in FY 2012-13

Validity:

For every workers' compensation dispute, one or more petitions for benefits may be filed, and these petitions request one or more benefits. The petition is closed when it is voluntarily dismissed by the claimant, dismissed by the judge, or addressed by a disposition order (i.e. final merit, settlement, stipulation). This measure evaluates the productivity of the process. Petitions for benefits represent the demand for the Judges of Compensation Claims service. The number of petitions for benefits closed is a valid measure to use in calculating unit costs.

Reliability:

Reliability assessment is essentially a matter of checking for consistency; if a measure yields the same result time after time, then it is free of random error. This indicator is a reliable measure of the Division's output because of its test-retest and intercoder reliability. The test-retest procedure is the simplest method for assessing reliability and involves measuring the output (the number of petitions for benefits closed) on two

Office of Policy and Budget – July, 2013

LRPP EXHIBIT IV: Performance Measure Validity and Reliability Department: DMS/Division of Administrative Hearings Program: Workers' Compensation Appeals - Judges of Compensation Claims Service/Budget Entity: Workers' Compensation Appeals - Judges of Compensation Claims Measure: Average Number of Days From Date Petition Filed to Date Petition Closed Action (check one): Requesting revision to approved performance measure. Change in data sources or measurement methodologies. Requesting new measure. Backup for performance measure.

Data Sources and Methodology:

The Division's electronic database, entitled the "Case Management System" (CMS), is the data source for this measure. An automated computer program is utilized to calculate the average number of days from the petition filed date to the petition closed date.

Petitions for benefits are entered into the "Case Management System" upon receipt by the Clerk's Office. Data is recorded from the petition including the filing date. A petition can be closed several different ways: (1) voluntarily dismissed by the claimant, (2) dismissed by the judge, or (3) addressed by a disposition order (i.e. final merit, settlement, stipulation). As petitions are closed, staff enter the data into CMS.

The CMS program calculated the FY 2012-13 standard of 125 days, which is a significant improvement over the FY 2011-12 standard of 143 days.

Validity:

Validity refers to the fit between an operational definition and the concept it is purported to measure. This indicator is a valid measure of the outcome because it meets the criteria of two of the three types of statistical validation: (1) subjective validation (face validity), and (2) criterion-related validation. First, on the face of it, this indicator appears to measure the concept it is intended to measure (face validity). Second, the content or apparent meaning of this measure is not as important as its usefulness as an indicator of the outcome (criterion-related validity). The test of this type of validity is the ability of this measure to classify or group data in terms of a single criterion (the average number of days from petition filed to petition closed).

For every workers' compensation dispute, one or more petitions for benefits may be filed, and these petitions request one or more benefits. The petition is closed when it is voluntarily dismissed by the claimant, dismissed by the judge, or addressed by a disposition order (i.e. final merit, settlement, stipulation). This indicator is a valid

measure of how timely the Judges of Compensation Claims are closing petitions for benefits. The statutory timeframes begin with the filing of the petition for benefits.
Reliability: Reliability assessment is essentially a matter of checking for consistency; if a measure yields the same result time after time, then it is free of random error. This indicator is a reliable measure of the Division's outcome because of its test-retest and intercoder reliability. The test-retest procedure is the simplest method for assessing reliability and involves measuring the outcome (the average number of days from petition filed to petition closed) on two separate occasions. The intercoder method involves examining the extent to which different persons using the same measurement procedures get equivalent results.
As petitions are closed, judges' staff enter this data into the database and it becomes a permanent part of the record. Data are collected in a consistent manner, applying the same methodology and can be duplicated to achieve the same results.

LRPP EXHIBIT IV: Performance Measure Validity and Reliability Department: DMS/Division of Administrative Hearings Program: Workers' Compensation Appeals - Judges of Compensation Claims Service/Budget Entity: Workers' Compensation Appeals - Judges of Compensation Claims Measure: Percent of Timely Held Mediations (130 days) Action (check one): Requesting revision to approved performance measure. Change in data sources or measurement methodologies. Requesting new measure. Backup for performance measure.

Data Sources and Methodology:

The Division's electronic database, entitled the "Case Management System" (CMS), is the data source for this measure. The percentage is calculated by dividing the number of petitions mediated within the statutory timeframe in a specified year by the total number of petitions mediated during that year.

Petitions for benefits are entered into the CMS upon receipt by the Clerk's Office. Data is recorded from the petition including the date it was filed. Multiple petitions are addressed in each mediation. The FY 2012-13 performance standard of 97% was calculated by dividing the number of petitions mediated within 130 days after filing (20,962) by the number of petitions mediated that year (21,655).

Validity:

Validity refers to the fit between an operational definition and the concept it is purported to measure. This indicator is a valid measure of the outcome because it meets the criteria of two of the three types of statistical validation: (1) subjective validation (face validity), and (2) criterion-related validation. First, on the face of it, this indicator appears to measure the concept it is intended to measure (face validity). Second, the content or apparent meaning of this measure is not as important as its usefulness as an indicator of the outcome (criterion-related validity). The test of this type of validity is the ability of this measure to classify or group data in terms of a single criterion (the percent of mediations held within 130 days).

For every workers' compensation dispute, state mediators hold one or more mediation conferences unless the parties utilize private mediation or if the Deputy Chief Judge of Compensation Claims waives the mediation requirement. Each mediation conference addresses one or more petitions for benefits. Chapter 440.25, F.S. requires that if the Judges of Compensation Claims cannot mediate a petition within 130 days then a private mediation must take place. However, in the case where the Judges of Compensation Claims mediators were able to mediate the petition in a timely fashion but the parties

were not ready for mediation, the parties can request a continuance. This measure is a valid indicator of how many petitions were mediated beyond 130 days of their filed date. **Reliability:** Reliability assessment is essentially a matter of checking for consistency; if a measure yields the same result time after time, then it is free of random error. This indicator is a reliable measure of the Division's outcome because of its test-retest and intercoder reliability. The test-retest procedure is the simplest method for assessing reliability and involves measuring the outcome (the percent of mediations held within 130 days) on two separate occasions. The intercoder method involves examining the extent to which different persons using the same measurement procedures get equivalent results. As mediation conferences are scheduled, rescheduled, held, etc. this information is kept on the mediators' computerized calendars. Any information remains in the database and can be replicated at any time. Data are collected in a consistent manner, compiled on a monthly and annual basis, using the same data sources, applying the same methodology and can be duplicated to achieve the same result.

LRPP EXHIBIT IV: Performance Measure Validity and Reliability Department: DMS/Division of Administrative Hearings Program: Workers' Compensation Appeals - Judges of Compensation Claims Service/Budget Entity: Workers' Compensation Appeals - Judges of Compensation Claims Measure: Number of Mediations Held Action (check one): Requesting revision to approved performance measure. Change in data sources or measurement methodologies. Requesting new measure. Backup for performance measure.

Data Sources and Methodology:

The data source is the Division's electronic database, entitled the "Case Management System" (CMS). This measure is a simple count of the number of mediation conferences held by state mediators throughout the state of Florida on a fiscal year basis. In FY 2012-13, 16,214 mediations were held.

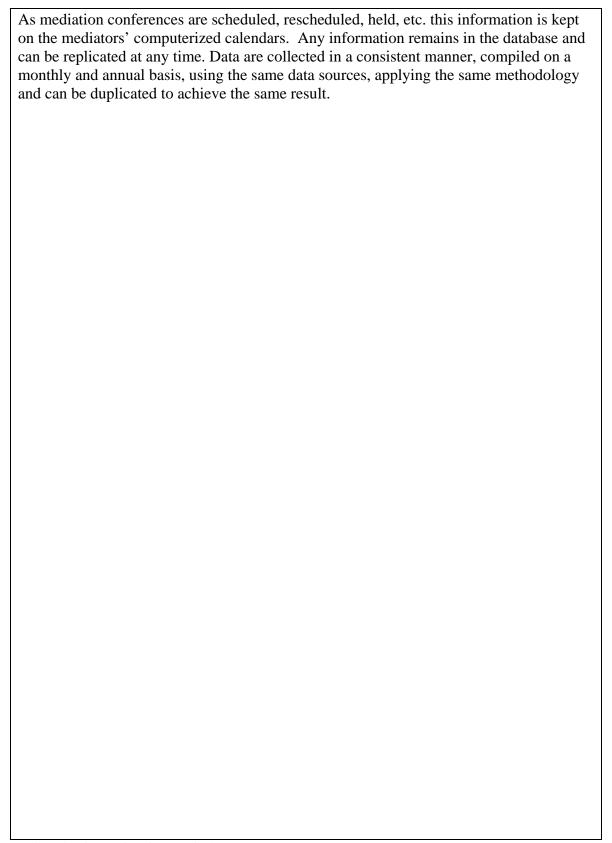

Validity:

Validity refers to the fit between an operational definition and the concept it is purported to measure. This indicator is a valid output measure because it meets the criteria of two of the three types of statistical validation: (1) subjective validation (face validity), and (2) criterion-related validation. First, on the face of it, this indicator appears to measure the concept it is intended to measure (face validity). Second, the content or apparent meaning of this measure is not as important as its usefulness as an indicator of output (criterion-related validity). The test of this type of validity is the ability of this measure to classify or group data in terms of a single criterion (the number of mediations held.)

For every workers' compensation dispute, state mediators hold one or more mediation conferences unless the parties utilize private mediation or if the Deputy Chief Judge of Compensation Claims waives the mediation requirement. The number of mediations held by state mediators is necessary in evaluating the productivity of the mediation process, and is also used as the unit cost measure for this activity.

Reliability:

Reliability assessment is essentially a matter of checking for consistency; if a measure yields the same result time after time, then it is free of random error. This indicator is a reliable measure of the Division's output because of its test-retest and intercoder reliability. The test-retest procedure is the simplest method for assessing reliability and involves measuring output (the number of mediations held) on two separate occasions. The intercoder method involves examining the extent to which different persons using the same measurement procedures get equivalent results.

LRPP EXHIBIT IV: Performance Measure Validity and Reliability Department: DMS/Division of Administrative Hearings Program: Workers' Compensation Appeals - Judges of Compensation Claims Service/Budget Entity: Workers' Compensation Appeals - Judges of Compensation Claims Measure: Percent of Concluded Mediations Resulting in Resolution (all issues except attorneys fees) Action (check one): Requesting revision to approved performance measure. Change in data sources or measurement methodologies. Requesting new measure. Backup for performance measure.

Data Sources and Methodology:

The data source is the Division's electronic database, entitled the "Case Management System" (CMS). The FY 2012-13 standard of 54% was calculated by dividing the number of mediations resulting in resolution (7,939) by the number of mediations concluded (14,673).

This measure is a percentage of mediations that concluded with one of the following results: (1) lump sum settlement; (2) all pending issues resolved; or (3) all pending issues resolved except attorneys fees. This percentage is compiled on a fiscal year basis.

Validity:

Validity refers to the fit between an operational definition and the concept it is purported to measure. This indicator is a valid measure of the outcome because it meets the criteria of two of the three types of statistical validation: (1) subjective validation (face validity), and (2) criterion-related validation. First, on the face of it, this indicator appears to measure the concept it is intended to measure (face validity). Second, the content or apparent meaning of this measure is not as important as its usefulness as an indicator of the outcome (criterion-related validity). The test of this type of validity is the ability of this measure to classify or group data in terms of a single criterion (the percent of concluded mediations resulting in resolution).

This indicator is a valid measure of how effectively the state mediation program is resolving disputed workers' compensation claims. The percentage of concluded mediations that result in resolution is a valid measure of the effectiveness of the mediation process.

Reliability:

Reliability assessment is essentially a matter of checking for consistency; if a measure yields the same result time after time, then it is free of random error. This indicator is a reliable measure of the Division's outcome because of its test-retest and intercoder

reliability. The test-retest procedure is the simplest method for assessing reliability and involves measuring the outcome (the percent of concluded mediations resulting in resolution) on two separate occasions. The intercoder method involves examining the extent to which different persons using the same measurement procedures get equivalent results.
As mediation conferences are concluded, the mediator records the results into the CMS for future retrieval and places those results in the case file. Any information remains in the database and the file and can be replicated at any time. Data are collected in a consistent manner, compiled on an annual basis using the same data sources, applying the same methodology and can be duplicated to achieve the same results.
