We are acknowledging the following staff at the Baker Act Reporting Center at USF who entered Fiscal Year 2020-2021 data: Seara Anderson, Abigail Barnes, Julian Beauregard, Sarah Bogovic, Bressia Borja, Rhonda Coleman, Danielle Cravero, Lillian Deaton, Caitlin Franklin, Megan Frederick, Nathan Gibson, Shanel Greene, Brittany Hector, Valeria Herrera, Sarah Langlois, Anna Moffitt, Nicole Nauman, Adrian Reyes-Alzate, Savannah Spannaus, and Katie Torres.

This document contains alternative text for graphics and figures, as well as descriptive text for website addresses, to facilitate the use of this report by people who use screen readers. Colors and patterns for figures were chosen to facilitate the use of this report by people with the most common forms of color blindness.

For more information see the website <https://www.usf.edu/cbcs/baker-act/>, call the Center at 813-974-1010, or send an email to bakeract@usf.edu.

This document may be reproduced in whole or part without restriction provided the Baker Act Reporting Center, University of South Florida is credited for the work.

I. Introduction

This is the Baker Act Annual Report for Fiscal Year (FY) 2020-2021 which contains information for several prior years in addition to FY 2020-2021.

Section 394.463, Florida Statutes, requires the Florida Department of Children and Families (Department) to receive and maintain copies of ex-parte orders, involuntary outpatient services orders, involuntary inpatient placement orders, professional certificates, law enforcement officers' reports, and reports relating to the transportation of patients. This statute also requires the Department to produce an annual report analyzing the data obtained from these documents.

Rule 65E-5.280, Florida Administrative Code, specifies the process for data submission and requires that Baker Act receiving facilities submit Baker Act forms to the Baker Act Reporting Center, which is housed in the Department of Mental Health Law & Policy, de la Parte Florida Mental Health Institute, College of Behavioral and Community Sciences at the University of South Florida. The forms identified below must be submitted to the Baker Act Reporting Center within five working days after the individual arrived at the receiving facility.

Form ¹	Form Name
<i>The underlined text below and elsewhere in this report indicates a hyperlink to a webpage. The links below will bring you to each form on the Department's webpage.</i>	
<u>CF-MH 3052a</u>	Report of Law Enforcement Officer Initiating Involuntary Examination
<u>CF-MH 3052b</u>	Certificate of Professional Initiating Involuntary Examination
<u>CF-MH 3001</u>	Ex-parte Order for Involuntary Examination
<u>CF- MH 3118</u>	Cover Sheet to Department of Children and Families

The Cover Sheet (CF-MH 3118) is used to systematically report demographic and provider information that corresponds to forms CF-MH3052a, CF-MH3052b, and CF-MH3001 listed above. Upon receipt of these forms, the Baker Act Reporting Center enters data from them, and produces reports on behalf of the Department. Links to statute, administrative code, forms, and other materials can be found on The Department of Children and Families (Department) Crisis Services – Baker Act web page.

The Baker Act data analyzed in this report are from involuntary examination forms received by the Baker Act Reporting Center. Involuntary examinations occur at Baker Act receiving facilities which are designated by the Department and include hospitals licensed under Chapter 395, Florida Statutes, and Crisis Stabilization Units (CSUs), licensed under Chapter 394, Florida Statutes. It is important to note that an involuntary examination does not always result in admission. As a result, the data in this report are of involuntary examinations, not admissions data, or counts of voluntary examinations. Throughout this report, Baker Act receiving facilities that receive funding from the Department are referred to as "public," while facilities that do not receive Department funding are referred to as "private".

Readers of this report are encouraged to read Technical Notes in Appendix A.

¹ Here is a link to the Department's webpage that contains multiple Baker Act specific forms: Florida Department of Children and Families Crisis Services

II. At a Glance

Baker Act Reporting Center Fiscal Year 2020-2021 **REPORT HIGHLIGHTS**

Involuntary Baker Act Exam Numbers in FY20-21

194,680
Involuntary Baker Act Exams
for
121,921
People with Involuntary Exams

Evidence Upon Which Involuntary Exams Were Based

51% Harm Only
36% Harm & Self Neglect
11% Self Neglect Only

Involuntary Exams Including Harm as an Evidence Type

68% Harm to Self Only
21% Harm to Self and Harm to Others
7% Harm to Others Only

Involuntary Exams by Age Group

 **20%** Children <18
 **72%** Adults 18-64
 **7%** Older Adults 65+

Initiating Professional

52% Law Enforcement
45% Professional Certificate
2% Ex Parte Order

94%
of law enforcement agencies initiated at least one involuntary exam.

Involuntary Exams by Gender

 **Male**
 **Female**

All Ages	52%	48%
Children <18	37%	63%
Adults 18-24	54%	46%
Adults 25-64	58%	42%
Older Adults 65+	49%	51%

Involuntary Exams Initiated by Health Professionals

- Physician (not psychiatrist) 65%
- LMHC 13%
- Psychiatrist 9%
- LCSW 6%
- Psychiatric Nurse 2%
- Psychologist 1%
- Physician Assistant 2%
- <1% Licenced Marriage & Family Therapist

Children were more likely than other age groups to have an involuntary exam initiated by LMHCs (26%) and LCSWs (13%).

Involuntary Exams by Race & Ethnicity

67% White
23% African American/Black
17% Hispanic Origin**
8% Other
3% Not Reported

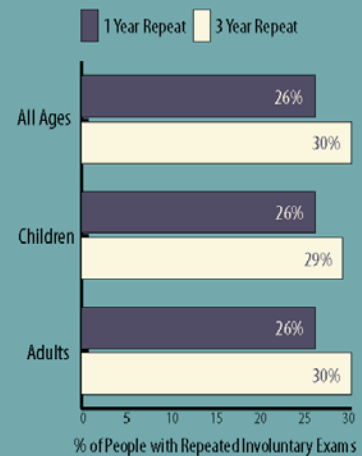

Involuntary Exam Trends Over 3 Years

	FY 2018-2019	FY 2019-2020	FY 2020-2021	3 Year Change
All Ages	211,097	202,680	194,680	8% ↓
Children <18	37,899	35,983	38,557	2% ↑
Adults 18-64	128,137	124,521	115,359	10% ↓
Older Adults 65+	15,464	14,795	13,288	14% ↓

Over the three-year period from FY 2018-2019 to FY 2020-2021 involuntary exams:

- Decreased for all ages (8%), adults (10%) and older adults (14%)
- Increased for children (2%)

Repeated Involuntary Exams

*Some percentages do not sum to 100% due to missing data and/or rounding **Hispanic origin count is considered an ethnicity and not a race. Ethnicity is collected separately from race.

III. Examination and Person Level Reporting

This section of the report includes counts of involuntary examinations for the past five fiscal years (FY 2016-2017 to FY 2020-2021) for multiple age groups. The data reported includes:

- Counts of involuntary examinations according to:
 - The type of initiator (law enforcement, professional certificate, or ex-parte);
 - Evidence type (harm, self-neglect, or both harm and self-neglect); and
 - Harm type (to self, to others, or to self and others).
- Types of health professionals who initiated involuntary examinations.
- Information about involuntary examinations at each:
 - Baker Act receiving facility (starting on [page 26](#)); and
 - Law enforcement agency (starting on [page 35](#)).

A. State Level Analyses

There were **194,680** involuntary examinations in FY 2020-2021 for **121,921** individuals. Counts of involuntary examinations are shown for five years for all ages (Table 1a) and by age groups (Table 1b). Tables 1a and 1b show the year-to-year percent change to facilitate a comparison between the change in involuntary examinations and the population. The statewide decrease from FY 2019-2020 to FY 2020-2021 can be accounted for by a decrease in involuntary examinations for young adults aged 18-24 (1.41% decrease), adults 25-64 (7.32% decrease), and older adults 65 and older (10.15% decrease). During this same period, involuntary examinations increased for children (< 18) by 7.21%.

Table 1a: Involuntary Examinations for Five Fiscal Years for All Ages

Fiscal Year (FY)	Involuntary Exams	Year-to-Year Percent Change	
		Involuntary Exams	Population
2020-2021	194,680	-3.91%	1.75%
2019-2020	202,598	-3.98%	1.74%
2018-2019	210,992	2.53%	1.80%
2017-2018	205,781	2.92%	1.62%
2016-2017	199,944	2.88%	1.70%

Table 1b: Involuntary Examinations for Five Fiscal Years by Age Groups

Fiscal Year (FY)	Involuntary Exams		Year-to-Year Percent Change	
	Counts	% of Total for All Ages	Involuntary Exams	Population
Age: < 18				
2020-2021	38,557	19.81%	7.21%	1.12%
2019-2020	35,965	17.75%	-5.06%	1.48%
2018-2019	37,882	17.95%	5.00%	1.52%
2017-2018	36,078	17.53%	10.18%	1.27%
2016-2017	32,744	16.38%	0.88%	1.31%
Age: 18-24				
2020-2021	24,699	12.69%	-1.41%	0.21%
2019-2020	25,051	12.36%	-6.01%	0.57%
2018-2019	26,653	12.63%	1.23%	0.59%
2017-2018	26,328	12.79%	0.32%	0.37%
2016-2017	26,243	13.13%	1.48%	0.42%
Age: 25-64				
2020-2021	115,359	59.26%	-7.32%	1.40%
2019-2020	124,474	61.44%	-2.80%	1.44%
2018-2019	128,061	60.69%	2.43%	1.50%
2017-2018	125,017	60.75%	0.62%	1.30%
2016-2017	124,249	62.14%	2.84%	1.38%
Age: 65+				
2020-2021	13,288	6.83%	-10.15%	3.99%
2019-2020	14,789	7.30%	-4.32%	3.26%
2018-2019	15,457	7.33%	1.35%	3.40%
2017-2018	15,251	7.41%	6.29%	3.36%
2016-2017	14,348	7.18%	3.96%	3.53%

*Less than 2% of involuntary examinations were missing the date of birth necessary to compute age, which is why the total summed percentages for each year in this table do not sum to 100%.

Several factors may have contributed to the changes in involuntary examination volume in FY 2020-2021, as seen in Figures 1a and 1b. These factors must be viewed in their entirety to understand the impact on involuntary examinations, and include pandemic-related considerations such as:

- Designated receiving facility capacity and closures;
- Changes to law enforcement and designated receiving facility transportation processing procedures; and
- Modifications to school schedules from brick and mortar to virtual learning.

It is important to note that this decrease in involuntary examinations does not mean there was a reduction in the need for mental health crisis services. Figure 1b provides an alternative format and scale such that the vertical axis is zoomed in so readers can better see the change over time for children (< 18), young adults (18-24) and older adults (65+) that is difficult to see on Figure 1a.

Figure 1a: Involuntary Examinations for Five Fiscal Years for All Ages and by Age Groups

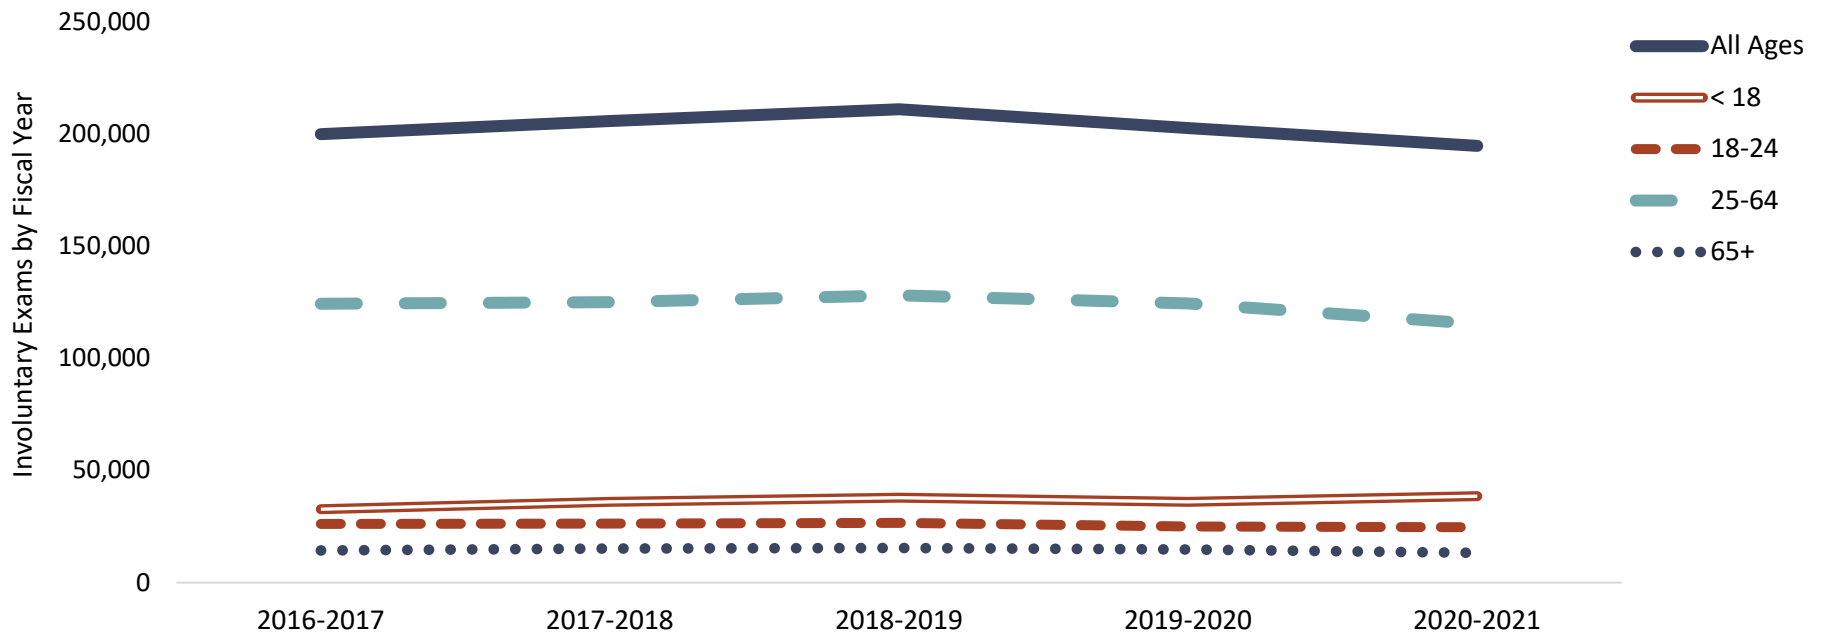

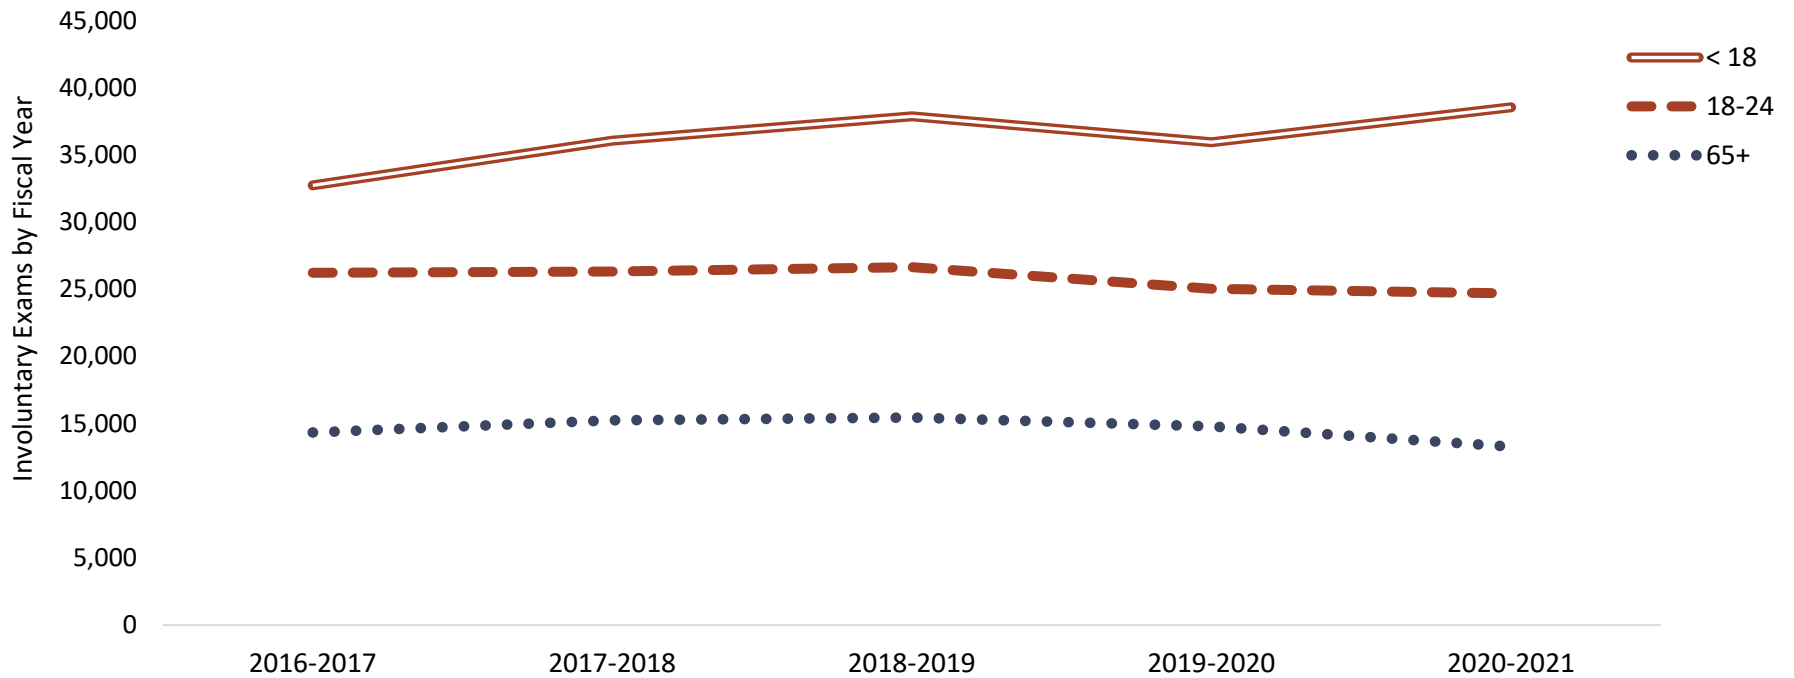

Figure 1b: Involuntary Examinations for Five Fiscal Years for Children (< 18), Young Adults (18-24), and Older Adults (65+)

Counts of involuntary examinations by age group are presented in Table 2. The percentage of total examinations and the percentage within each age group are also included. For example, involuntary examinations for older adults aged 65 to 74 accounted for 4.56% of all involuntary examinations during the fiscal year and 66.77% of involuntary examinations for the older adults (65+) category. Less than 2% of involuntary examinations were missing the date of birth necessary to compute age and are shown as “Age Not Reported” in Table 2.

Table 2: Involuntary Examinations by Age Groups for Fiscal Year 2020-2021

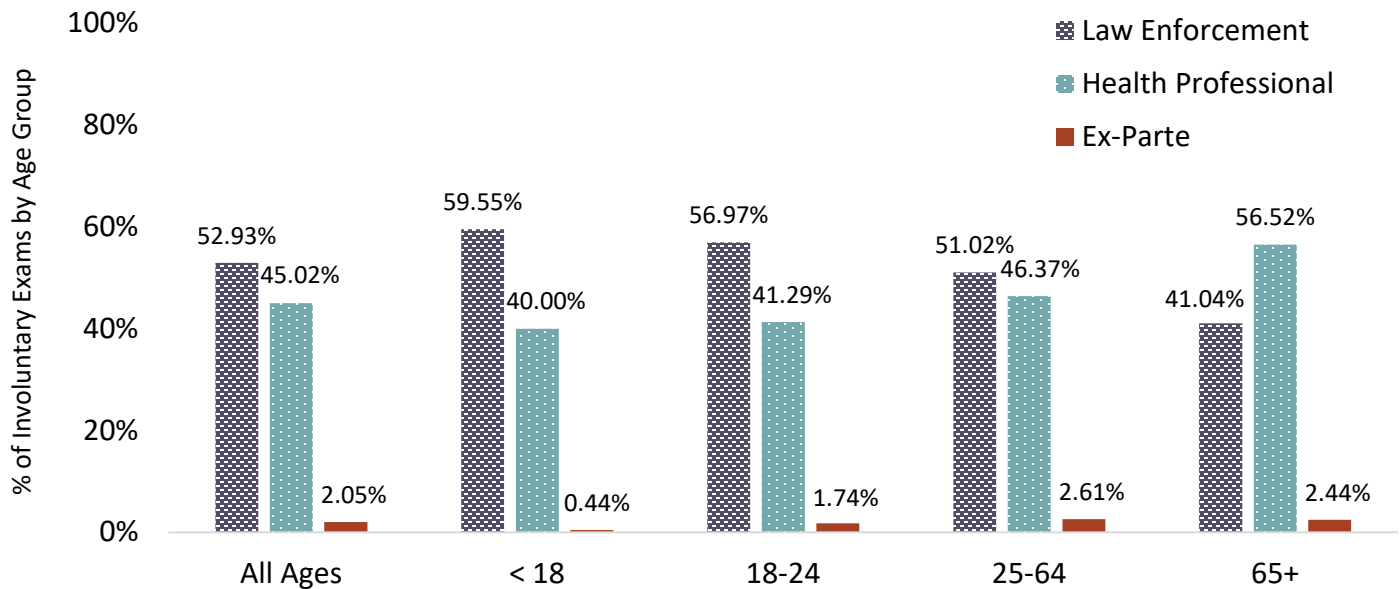

Age Groups	Involuntary Examinations Fiscal Year 2020-2021	Percent of Total Involuntary Examinations	Percent of Involuntary Examinations Within Each Age Grouping
Children (<18)	38,557	19.81%	100.00%
Ages 5-10	2,962	1.52%	7.68%
Ages 11-14	18,249	9.37%	47.33%
Ages 15-17	17,346	8.91%	44.99%
Adults (18-64)	140,058	71.94%	100.00%
Ages 18-24	24,699	12.69%	17.63%
Ages 25-34	38,866	19.96%	27.75%
Ages 35-44	31,521	16.19%	22.51%
Ages 45-54	23,765	12.21%	16.97%
Ages 55-64	21,207	10.89%	15.14%
Older Adults (65+)	13,288	6.83%	100.00%
Ages 65-74	8,873	4.56%	66.77%
Ages 75-84	3,397	1.74%	25.56%
Ages 85+	1,018	0.52%	7.66%
Age Not Reported	2,777	1.43%	100.00%

Initiation Type, Evidence Type, and Harm Type:

Involuntary examinations may be initiated by law enforcement, certain health professionals, or ex-parte order (see Figure 2). The types of health professionals that initiated involuntary examinations are shown in Table 3. To initiate an involuntary examination, there must be evidence of harm, neglect, or both harm and neglect (see Figure 3). Harm is further described as being harm to self, others, or both self and others (see Figure 4).

Initiation Type: 52.93% of the involuntary examinations in FY 2020-2021 were initiated by law enforcement, 45.02% were initiated by an individual with a professional certificate, and 2.05% were initiated via ex-parte order.

Figure 2: Initiation Type for Fiscal Year 2020-2021

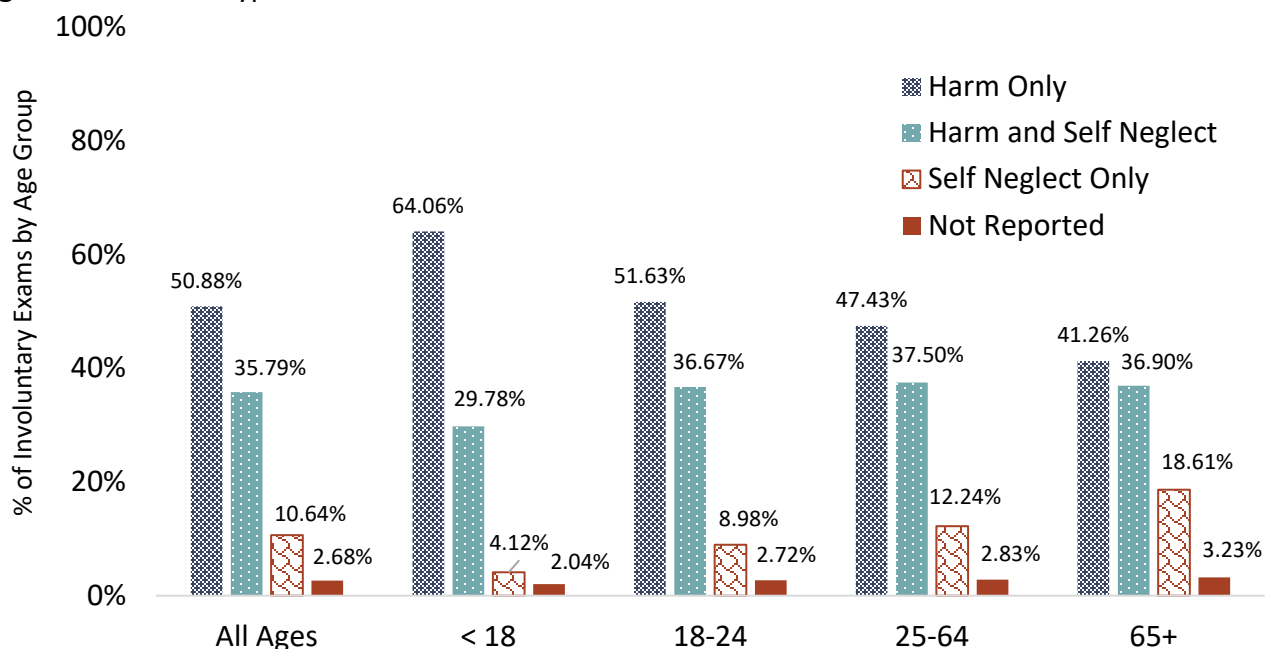

Professional Certificate Type: Percentages of involuntary examinations initiated by professional certificate are shown in Table 3 by professional type. Children with involuntary examinations initiated by professional certificate are more likely than other age groups to have their involuntary examinations initiated by mental health counselors, marriage and family therapists, and clinical social workers, and are less likely than other groups to have involuntary examinations initiated by physicians (including psychiatrists).

Table 3: Involuntary Examination Initiations by Professional Certificate Type

Professional Certificate Type	All Ages	Children (<18)	18-24	25-64	Older Adults (65+)
Percentages Computed on Total Number of Involuntary Examinations by Professional Certificate Type					
Physician (not a psychiatrist)	64.89%	48.22%	68.13%	70.01%	59.24%
Physician (Psychiatrist)	8.99%	5.92%	7.66%	9.32%	14.39%
Licensed Mental Health Counselor	12.85%	25.79%	11.21%	9.48%	12.29%
Licensed Clinical Social Worker	6.25%	13.49%	5.61%	4.51%	4.41%
Psychiatric Nurse	1.97%	1.24%	2.00%	1.86%	4.10%
Clinical Psychologist	0.99%	0.84%	0.85%	0.97%	1.65%
Physician Assistant	1.54%	1.32%	1.88%	1.52%	1.70%
Licensed Marriage and Family Therapist	0.68%	1.62%	0.62%	0.48%	0.24%
Multiple Professional Types Reported	0.17%	0.15%	0.18%	0.16%	0.27%
Not Reported	1.66%	1.41%	1.86%	1.68%	1.70%

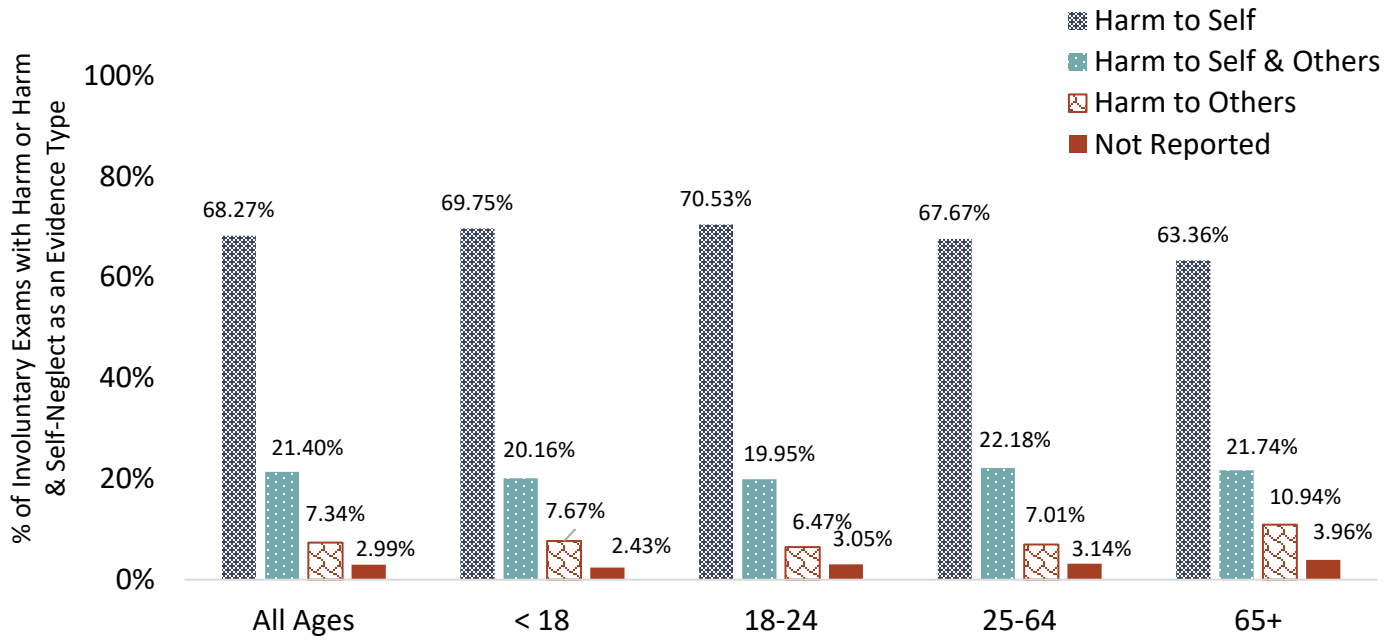

Evidence Type: Half (50.88%) of involuntary examinations were based on evidence of *harm only*. One-third (35.79%) were based on *harm and self-neglect*. Ten percent (10.64%) of involuntary examinations were based on evidence of *self-neglect only*. As age increased, *self-neglect only* was more common while *harm only* was less common.

Figure 3: Evidence Type for Fiscal Year 2020-2021

Harm Type: Harm can be further broken down into harm to self and/or harm to others. The percentage of involuntary examinations that had harm as an evidence type (either harm only or harm and neglect) by harm type is shown in Figure 4. Two thirds (68.27%) of involuntary examinations with harm as an evidence type were based on evidence of *harm to self only*. One-fifth (21.40%) of involuntary examinations with harm as an evidence type were based on both *harm to self* and *harm to others*. *Harm to others only* was the evidence upon which 7.34% of involuntary examinations with harm as an evidence type were initiated. The most striking aspect of Figure 4 is how similar the proportions are across age groups.

Figure 4: Harm Type for Involuntary Examinations with Harm as an Evidence Type for Fiscal Year 2020-2021

Location/Custody at time of involuntary examination: Staff at Baker Act receiving facilities complete check boxes on the Cover Sheets (form CF-MH3118) that are submitted with each 3052a, 3052b, and 3001 form. The percentage of “yes” responses to these items on the Cover Sheet are shown in Figure 6a for adults (> 18) and older adults (65+) as well as in Figure 6b for children (< 18).² At the time of their involuntary examination, less than 5% of adults were in an assisted living facility, nursing home, or jail. Approximately 11% of children were in school, 3% were child welfare involved, and less than 1% were juvenile justice involved prior to their involuntary examination. The percentage of “yes” responses on the Cover Sheet for an individual’s location immediately prior to the involuntary examination are shown in Figure 5a for adults and Figure 5b for children.

Figure 5a: Location/Custody at Time of Involuntary Examination Initiation for Adults

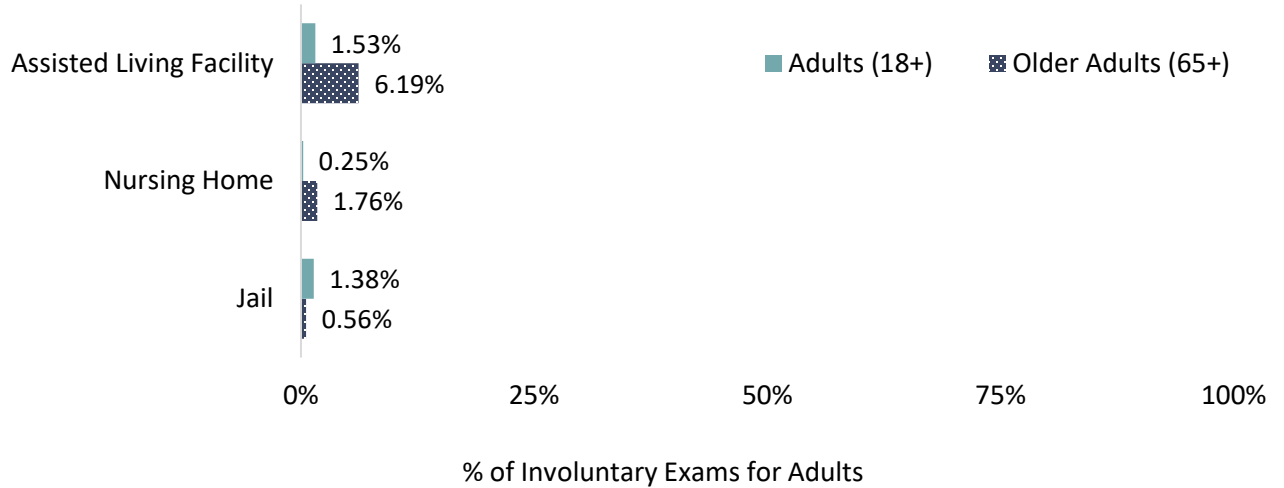

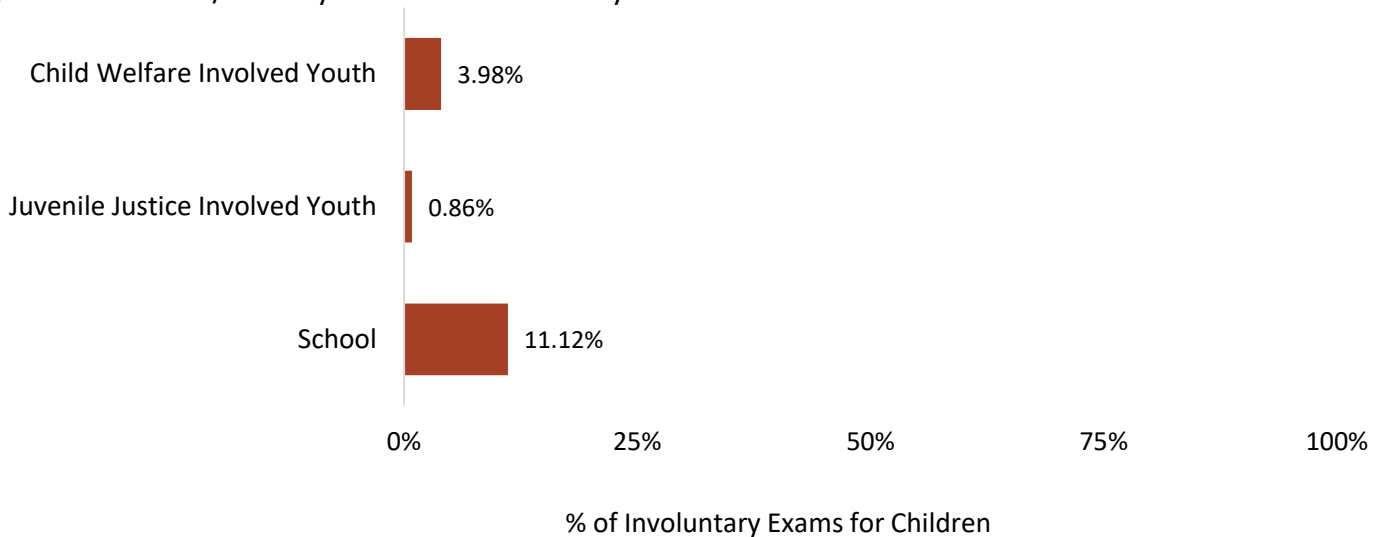

Figure 5b: Location/Custody at Time of Involuntary Examination Initiation for Children

² Note that people between 18 and 21 may have an involuntary exam initiated at a Florida high school. Therefore, some involuntary exams for people older than 17 may have a “Yes” checked for the “school” location item on the Cover Sheet completed at the receiving facility. We computed percentages for Figures 6a and 6b for people 17 and younger. This is because there were very few involuntary exams (22 in FY 2020-2021) for people 18 through 21 for which the “Yes” school box was checked on the Cover Sheet. The denominators we used to compute percentages for Figures 6a and 6b were age specific. This means that the denominator for Figure 6b was for involuntary exams for people 17 and younger. Including involuntary exams for people over 18 in the numerator and the denominator for percentages in Figure 6b would have lowered the percentage in a way that was misleading (artificially low).

B. Person Level Reporting

The next section of this report includes counts of individuals with involuntary examinations categorized by gender, race, ethnicity, and age. This section differs from content in this report beginning on page 17, which are counts of involuntary examinations and not counts of individuals with involuntary examinations. There were **121,921 individuals** with at least one involuntary examination in FY 2020-2021. The count of individuals with involuntary examinations in a given time period is always less than the count of involuntary examinations because some individuals have more than one involuntary examination.³

³ Information about the creation of a unique person identifier necessary for analysis at the person level is in contained in [Appendix A](#) of this report.

Gender, Race, and Ethnicity

For all ages, men (52.08%) had more involuntary examinations than women (47.62%). This pattern is reflected across age groups 18-24 and 25-64. For older adults (65+), however, there were more women (51.19%) with involuntary examinations than men (48.46%). Almost two-thirds of involuntary examinations for children were for girls (62.45%) as compared to boys (37.26%).

Table 4a: Counts of Individuals with Involuntary Examinations for Fiscal Year 2020-2021 in Total and by Gender, Race, and Hispanic Origin – **By Age Group**

Age Groups	Total Individuals*	Rate Per 100,000	Gender by Percent			Race by Percent				Hispanic Origin by Percent		
			Male	Female	Not Reported	White	Black	Other	Not Reported	Yes	No	Not Reported
All Ages	121,921	563	52.08%	47.62%	0.31%	67.13%	22.88%	7.50%	2.50%	16.60%	78.94%	4.46%
Children (<18)	25,077	801	37.26%	62.45%	0.29%	62.19%	23.05%	11.17%	3.58%	19.76%	76.99%	3.25%
18-24	17,508	1,005	53.50%	46.18%	0.32%	60.06%	27.60%	9.54%	2.80%	18.43%	76.66%	4.91%
25-64	69,650	627	57.58%	42.13%	0.29%	68.54%	23.26%	6.11%	2.09%	14.73%	80.77%	4.50%
65+	9,558	212	48.46%	51.19%	0.35%	82.46%	11.60%	4.16%	1.77%	18.72%	75.25%	6.04%
Not Known	499	N/A	56.11%	41.88%	2.00%	66.13%	22.04%	5.61%	6.21%	13.05%	76.10%	10.84%

*371 individuals were in two different age groups in FY 2020-2021. This is why the sum of the counts of individuals in the age categories is slightly higher than the count of individuals in the “all ages” category. For example, someone who had two involuntary examinations in the fiscal year who turned 25 during the year would be counted as a person in both the 18-24 and 25-64 categories.

Demographics of a more detailed age breakdown for children are shown in Table 4b. Almost two-thirds (63.48%) of involuntary examinations for 5- to 10-year-old children were for boys. Conversely, two-thirds of involuntary examinations for 11- to 13-year-old (68.28%) and 14- to 17-year-old (62.88%) children were for girls.

Table 4b: Counts of People with Involuntary Examinations for Fiscal Year 2020-2021 in Total and by Gender, Race, and Hispanic Origin – **Children**

Age Groups	Total Children*	Rate Per 100,000	Gender by Percent			Race by Percent				Hispanic Origin by Percent		
			Male	Female	Not Reported	White	Black	Other	Not Reported	Yes	No	Not Reported
5-10	1,922	135	63.48%	36.21%	0.31%	56.30%	30.12%	10.87%	2.71%	15.09%	82.26%	2.65%
11-13	7,494	1,028	31.49%	68.28%	0.23%	61.93%	22.76%	11.64%	3.67%	21.07%	75.91%	3.02%
14-17	16,026	1,629	36.82%	62.88%	0.31%	63.03%	22.44%	10.94%	3.59%	19.62%	77.01%	3.37%

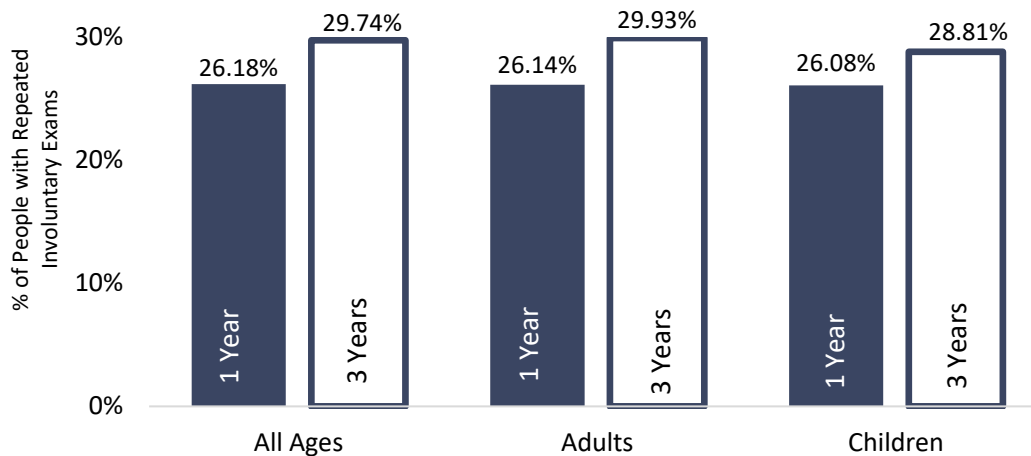

*970 children were in two different age groups in FY 2020-2021. This explains why the sum of the counts of children from Table 4a is different than the sum of total children in Table 4b.

Repeated Involuntary Examinations for 1 Year and 3 Years

Information about repeated involuntary examinations for one year (FY 2020-2021) and three years (FY 2018-2019 through FY 2020-2021) is shown in Figure 7 and in more detail in Table 5a (all ages), Table 5b (adults), and Table 5c (children). This includes counts of involuntary examinations and counts of individuals. One-quarter of individuals across all ages (26.18%), adults (26.14%), and children (26.08%) who had an involuntary examination in FY 2020-2021 had two or more examinations during the fiscal year. Slightly higher percentages of individuals across all ages (29.74%), adults (29.93%), and children (28.81%) had two or more involuntary examinations during the three-year period.

All Ages: One-quarter (26.18%) of individuals with an involuntary examination in FY 2020-2021 had two or more involuntary examinations during the year, while 29.74% of individuals had two or more involuntary examinations over three years (FY 2018-2019 through FY 2020-2021; see Figure 7).

Figure 7: Repeated Involuntary Examinations in the last 1 Year and the last 3 Years

Individuals with multiple involuntary examinations accounted for a disproportionate number of examinations (see Table 5a). For example, the 70.26% of individuals with one involuntary examination during the three-year period accounted for 37.31% of involuntary examinations during this time. Conversely, the 29.74% of individuals with two or more involuntary examinations in three years accounted for 62.69% of involuntary examinations during the three-year period.

Table 5a: Repeated Involuntary Examinations for Fiscal Year 2020-2021 for All Ages

Number of Involuntary Examinations	Count of Individuals	Percent of Individuals	Count of Examinations	Percent of Examinations
1 Year: FY 2020-2021				
1	89,996	73.82%	89,996	46.23%
2	17,897	14.68%	35,794	18.39%
3	6,315	5.18%	18,945	9.73%
4	2,987	2.45%	11,948	6.14%

11-19	3,442	1.07%	47,157	7.75%
20+	1,250	0.39%	42,218	6.94%
Total	323,083 individuals		608,457 involuntary examinations	
Counts of individuals with 20 or more involuntary examinations during the year are grouped together to redact for cell sizes lower than 10.				

Adults (18+): One-quarter (26.14%) of adults with an involuntary examination in FY 2020-2021 had two or more involuntary examinations during the year, while 29.93% of adults had two or more involuntary examinations over three years (FY 2018-2019 through FY 2020-2021). Adults with multiple involuntary examinations account for a disproportionate number of examinations. For example, the 73.86% of adults with one involuntary examination in one year accounted for 45.91% of the involuntary examination for adults during the year. Conversely, the 26.14% of adults with two or more involuntary examinations in one year accounted for 54.09% of the involuntary examinations for the year. While the 70.07% of adults with one involuntary examination in three years accounted for 36.85% of adults with involuntary examinations during the three-year period, the 29.93% of adults with two or more involuntary examinations in three years accounted for 63.15% of involuntary examinations for adults during the three-year period.

Table 5b: Repeated Involuntary Examinations for Fiscal Year 2020-2021 for Adults (18+)

Percent of Involuntary Examinations	Count of Individuals	Percent of Individuals	Count of Examinations	Percent of Examinations
1 Year: FY 2020-2021				
1	71,627	73.86%	71,627	45.91%
2	14,153	14.59%	28,306	18.14%

6-10	8,392	3.26%	62,042	12.66%
11-20	2915	1.13%	40,044	8.17%
20+	1102	0.43%	34,185	6.98%
Total	257,653 adults		489,930 involuntary examinations	
Counts adults with 20 or more involuntary examinations during the year are grouped together to redact for cell sizes lower than 10.				

Children: One-quarter (26.07%) of children with an involuntary examination in FY 2020-2021 had two or more involuntary examinations during the year, while 28.81% of children had two or more involuntary examinations over three years (FY 2018-2019 through FY 2020-2021). Children with multiple involuntary examinations account for a disproportionate number of examinations. For example, the 73.92% of children with one involuntary examination in one year accounted for 47.96% of the involuntary examinations for children during the year. Conversely, the 26.07% of children with two or more involuntary examinations in one year accounted for 52.03% of the involuntary examinations for the year. While the 71.19% of children with one involuntary examination in three years accounted for 41.17% of children with involuntary examinations during the three-year period, the 28.81% of children with two or more involuntary examinations in three years accounted for 58.82% of involuntary examinations for children during the three-year period.

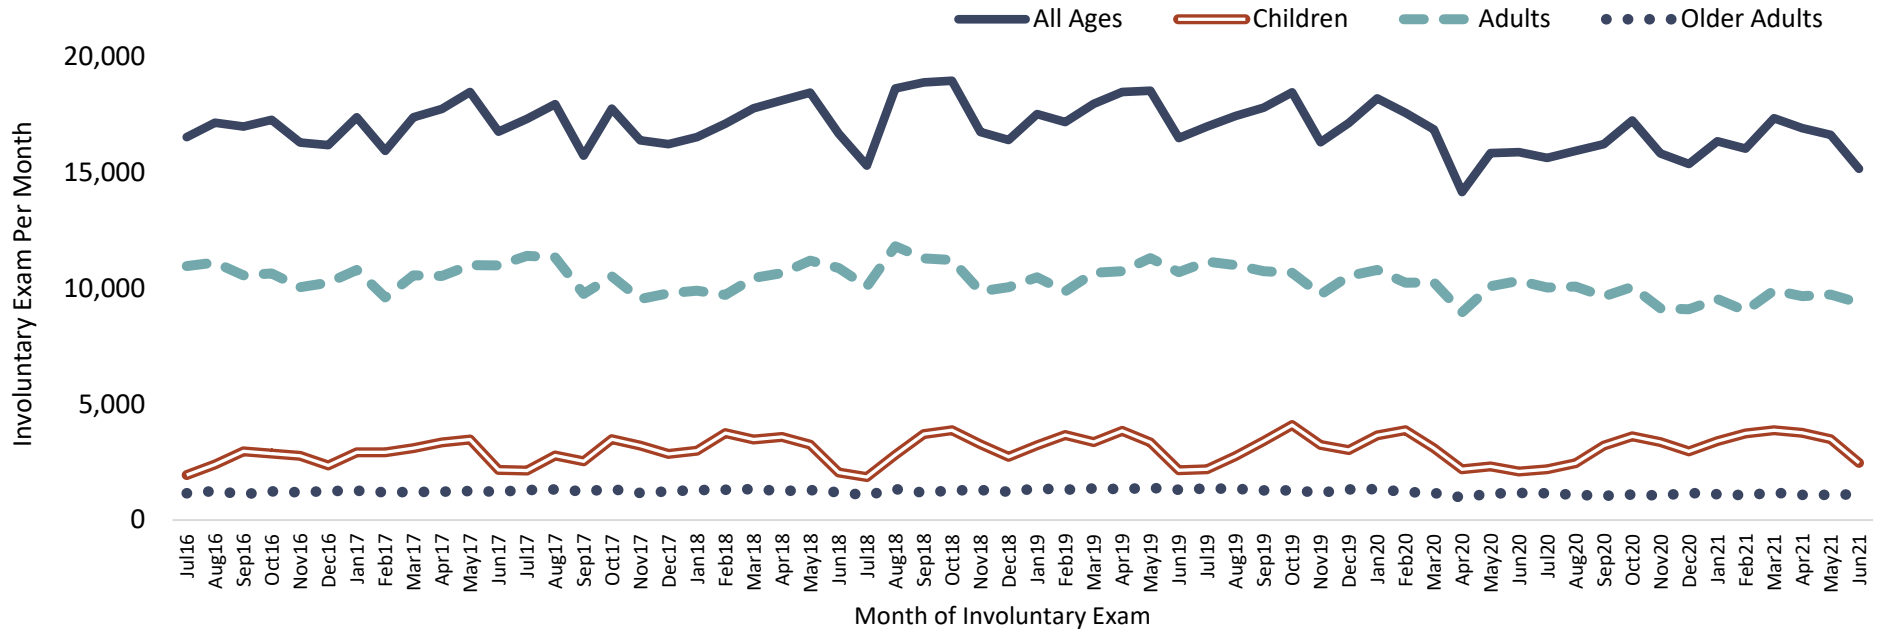

Table 5c: Repeated Involuntary Examinations for Fiscal Year 2020-2021 for Children (< 18)

Number of Involuntary Examinations	Count of Individuals	Percent of Individuals	Count of Examinations	Percent of Examinations
1 Year: FY 2020-2021				
1	18,538	73.92%	18,538	47.96%
2	3,730	14.87%	7,460	19.30%
3	1,346	5.37%	4,038	10.45%

5	1,072	1.64%	5360	4.75%
6-10	1,748	2.68%	12811	11.36%
11-19	497	0.76%	6666	5.91%
20+	134	0.21%	3494	3.10%
Total	65,189 children		112,726 involuntary examinations	
Counts of children with 11 or more involuntary examinations during the one-year period and children with 20 or more involuntary examinations for the three-year period are grouped together to redact for cell sizes lower than 10.				

C. Change Over Time

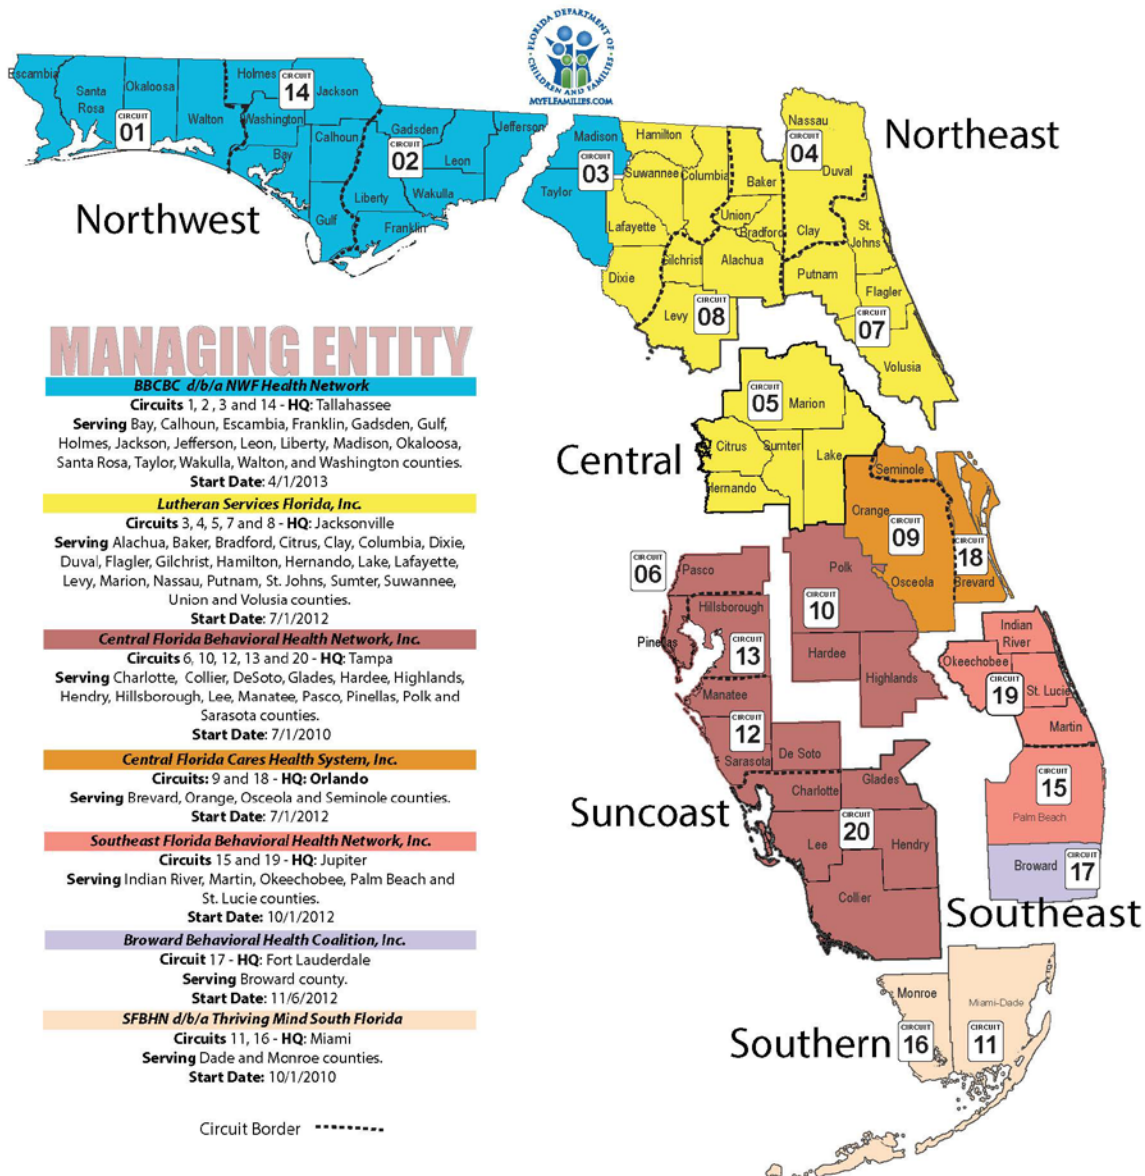

Counts of involuntary examinations by month for all ages, adults, children (< 18), and older adults (65+) are shown in Figure 6. Some random variation in the number of involuntary examinations from month to month is to be expected. We also see what is called “seasonality” in the data. For example, involuntary examinations for children consistently decrease during the months school is not in session, including winter break and for summer. Involuntary examinations increased each year from when the Baker Act Reporting Center began producing reports in the mid-1990s up until 2020. There was a marked decrease in involuntary examinations at the beginning of the pandemic in March 2020. Involuntary examinations have continued to increase for children and decrease for adults and older adults through the end of Fiscal Year 2020-2021. This decrease in involuntary examinations for adults and older adults is such that from Fiscal Year 2016-2017 through Fiscal Year 2020-2021 involuntary examinations decreased for adults by 6.93 percent and for older adults by 7.39 percent. Involuntary examinations increased for children by 17.75 percent during the same time period of five years.

Figure 6: Involuntary Examinations by Month Over Five Fiscal Years

D. Geographic Area Reporting

Tables follow that categorize involuntary examinations by Department Region⁴ (Table 6a), managing entity⁵ (Table 6b), judicial circuit⁶ (Table 6c), and county of residence (Table 6d). Caution should be applied when interpreting changes for counties with smaller populations and fewer involuntary examinations.⁷ Some geographic areas are categorized in this section as “not known” because some forms are received with no county of residence written on the Cover Sheet (form CF-MH3118). The county of residence is needed to categorize an involuntary examination by Department Region, judicial circuit, and/or the Managing Entity.

⁴ Florida Department of Children and Families Media Guide Showing Department Regions and Circuits

⁵ Florida Department of Children and Families Managing Entities

⁶ The Florida Bar Judicial Circuits Map

⁷ Changes in small numbers can lead to large increases or decrease to percentages that may not be meaningful. See Appendix A for more details on this issue.

Managing Entity Name	Counties Served by Managing Entity
Big Bend Community Based Care, Inc. (d/b/a NWF Health Network)	Bay, Calhoun, Escambia, Franklin, Gadsden, Gulf, Holmes, Jackson, Jefferson, Leon, Liberty, Madison, Okaloosa, Santa Rosa, Taylor, Wakulla, Walton, and Washington
Broward Behavioral Health Coalition	Broward
Central Florida Behavioral Health Network	Charlotte, Collier, DeSoto, Glades, Hardee, Highlands, Hendry, Hillsborough, Lee, Manatee, Pasco, Pinellas, Polk, and Sarasota
Central Florida Cares Health System	Brevard, Orange, Osceola, and Seminole
Lutheran Services Florida	Alachua, Baker, Bradford, Citrus, Clay, Columbia, Dixie, Duval, Flagler, Gilchrist, Hamilton, Hernando, Lake, Lafayette, Levy, Marion, Nassau, Putnam, St. Johns, Sumter, Suwannee, Union, and Volusia
Southeast Florida Behavioral Health Network	Indian River, Martin, Okeechobee, Palm Beach, and St. Lucie
Thriving Mind South Florida (d/b/a South Florida Behavioral Health Network)	Miami-Dade and Monroe

Department Regions													
<i>The totals below by Department Region differ slightly from the totals by Department Region in the Table in 7 because county of residence is used to categorize people by county in this Table, while the county of the receiving facility is used to categorize people in the Table 7.</i>													
Central	42,484	22.79%	12.99%	57.15%	5.89%	52.31%	55.11%	42.96%	1.93%	-1.85%	2.56%	1.03%	9.24%
Northeast	26,897	21.04%	13.45%	58.42%	5.66%	41.31%	57.90%	39.77%	2.33%	1.68%	1.91%	6.39%	6.93%
Northwest	10,829	26.73%	13.33%	54.34%	4.68%	27.77%	48.37%	47.63%	4.00%	-5.19%	0.31%	-17.13%	3.92%
Southeast	27,002	18.25%	13.44%	60.08%	7.07%	40.86%	47.90%	50.51%	1.59%	-10.86%	1.11%	-9.65%	5.26%
Southern	29,246	12.89%	10.84%	64.73%	10.75%	18.00%	54.33%	43.79%	1.87%	-2.22%	1.28%	-2.59%	5.46%
SunCoast	45,162	23.57%	12.11%	57.00%	6.69%	44.85%	52.81%	44.95%	2.24%	-6.16%	2.09%	-8.20%	8.00%
Not Known**	13,060	7.46%	14.18%	65.74%	5.21%	31.33%	47.10%	51.96%	0.93%	-0.99%	N/A	-10.55%	N/A

*The summed percentages for the age groups do not add up to 100% because we were unable to compute age for a small percentage of involuntary examinations that were missing dates of birth on the Cover Sheet completed by receiving facility staff. Other percentages sum slightly less than 100% due to rounding of numbers.

⁸ Note that we have only reported the percentage of involuntary examinations by geographic area that occurred at publicly funded Baker Act receiving facilities. The percentage at privately funded receiving facilities and at VA facilities is not reported in this table because of space constraints. Not all VA facilities submit forms to the Baker Act Reporting Center. Those VAs facilities that submit data account for less than one percent (0.45%) of involuntary exams in FY 2020-2021 (18-24: 0.06%, 25-64: 0.01%, and 65+: 1.56%). This means that the vast majority of involuntary examinations that are not at publicly funded receiving facilities are at privately funded receiving facilities.

⁹ The percentage change from FY 2019-2020 to FY 2020-2021 is slightly different in this Table 6a than in Table 7 because the counts in this Table 6a are based on county of residence to group involuntary exams by Department Region, while Table 7 uses the county of the receiving facility. Table 7 is the only Table in this report to use the county of the receiving facility. All other counts/percentages in this report are based on the county of residence.

Table 6b: FY 2020-2021 Involuntary Examinations by the Managing Entity

*The summed percentages for the age groups do not add up to 100% because we were not able to compute age for a small percentage of involuntary examinations that were missing dates of birth on the Cover Sheet completed by receiving facility staff. Other percentages sum slightly less than 100% due to rounding of numbers.

E. Receiving Facility Level Reporting

Counts of involuntary examinations in Fiscal Year (FY) 2019-2020 and FY 2020-2021 for each receiving facility are shown on the following pages. Baker Act receiving facilities are listed by the Department region, then in descending order by number of involuntary examinations in FY 2020-2021 in that region. The corresponding Managing Entities are also included. The Managing Entities contract with behavioral health providers, including designated receiving facilities, to provide behavioral health services. Also reported is the percent change in involuntary examinations from FY 2019-2020 to FY 2020-2021.

For some facilities, Table 7 shows a large change in the number of involuntary examinations as well as the percent change from FY 2019-2020 to FY 2020-2021. There are several factors that may have contributed to the fluctuations.¹⁰

A total row is provided in Table 7 for each of the Department's regions. It is also important to understand that Table 7 is the only presentation of counts by region that relies on the county of the receiving facility. The rest of this report uses the county of residence to categorize by county. County categorizations are then used to group within the Department's regions, Judicial Circuits, and Managing Entity areas. This explains why the counts by the Department's regions are slightly different in Table 6a and Table 7.

Facility names in the following tables marked with a * were no longer designated by the Department as Baker Act receiving facilities at some point in FY 2020-2021. Facilities names followed by a ** were newly designated by the Department as Baker Act receiving facilities at some point in FY 2020-2021.

¹⁰ Additional information about issues related to the meaning given to percentage change is contained in Appendix A, starting on page [50](#).

Table 7: Fiscal Year 2020-2021 Involuntary Examinations by Receiving Facility

Public and Private Baker Act Receiving Facilities¹²: The distribution of involuntary examinations at public and private receiving facilities is shown in Figure 7. “Public” in this context means the receiving facility received funds for Baker Act examination related services from the Department. These public facilities are under contract with a Managing Entity. Public receiving facilities may also receive funding through Medicaid, private insurance, or county governments. “Private” receiving facilities did not receive funds from the Department and most are not under contract with a Managing Entity.

Children are about equally as likely to have their involuntary examination conducted at a public (50.26%) or a private (49.74%) receiving facility. With increasing age, it is more likely that a person has their involuntary examination at a privately funded receiving facility, with 49.74% of involuntary examinations for children, 58.63% for examinations for young adults (18-24), 61.75% of examinations for adults (25-64), and 80.63% older adults (65+) at privately funded receiving facilities. The meaningful percentage of involuntary examinations conducted at privately funded receiving facilities means that funding and policy, as it relates to both types of receiving facilities, are essential to understand the use of involuntary examinations.

Figure 7: Involuntary Examinations at Public and Private Baker Act Receiving Facilities

¹² Note that the Baker Act receiving facility list provided on 9/22/2022 by staff at the Department to the Baker Act Reporting Center at USF was used for any analysis using the public/private distinction for receiving facilities.

Organizations Operating Baker Act Receiving Facilities: Some Baker Act receiving facilities are operated by larger organizational entities. Following in Table 8 are percentages of involuntary examinations in FY 2020-2021 at Baker Act receiving facilities operated by these organizational entities that have two or more Baker Act receiving facilities in Florida. One-quarter (25.17%) of involuntary examinations occurred at facilities operated by either HCA Florida Healthcare (20 receiving facilities, 13.58% of involuntary examinations) or Universal Health Services (10 receiving facilities, 11.59% of involuntary examinations).

F. Involuntary Examinations by Initiating Law Enforcement Agency

Counts of involuntary examinations initiated by law enforcement agencies (Table 9a) and law enforcement agencies that are part of universities or school districts (Table 9b) are on the following pages. Almost all (94%, 350 out of 373) law enforcement agencies in Florida had at least one officer that initiated involuntary examinations in FY 2020-2021. Law enforcement may also be involved in the transport of people with involuntary examinations initiated via a health professional or ex-parte order. Law enforcement agencies are listed alphabetically by county of the agency and then within each county in descending order by agency. Cell sizes smaller than 10 were redacted to protect individuals' privacy.

In order to redact small cell sizes, counts of involuntary examinations initiated by law enforcement agencies with fewer than 10 involuntary examinations in FY 2020-2021 were grouped together to arrive at a total larger than 10. This grouping was done to demonstrate that these law enforcement agencies initiated involuntary examinations, while keeping the cell size count 10 or higher. For example, for Alachua County High Springs Police Department and Santa Fe College Police Department, each initiated fewer than 10 involuntary examinations in FY 2020-2021. These two agencies combined initiated 17 involuntary examinations in FY 2020-2021.

Leon	Leon County schools Department of Safety	< 10
Orange	Orange County Public Schools District Police	< 10
Pinellas	Pinellas County Schools Police Department	30
The following four school district law enforcement agencies did not have any involuntary examinations in FY 2020-2021:		
<ul style="list-style-type: none"> Alachua County Public School Police Department (Alachua), Citrus County school Board Police Department (Citrus), Nassau District Schools Department of Student Safety (Nassau), and Putnam County School District Police (Putnam). 		

IV. Enhancing the System of Care to Reduce Behavioral Health Crisis

The Department uses data from the Baker Act annual reports to drive the development of services and resources that support individuals who engage with behavioral health services prior to a Baker Act and post-discharge. Community resources include peer support services, outpatient therapies, residential services, crisis services, and training to ensure individuals receive the appropriate level of care. The Department continues to focus on enhancing the continuum of behavioral health services that are available throughout the State, as well as developing more preventive services which identify and address problems of individuals earlier.

Service Array

The Department prioritizes the needs of uninsured and under-insured individuals with behavioral health concerns and integrates prevention services to provide individuals with someone to talk to (helplines), someone to respond (mobile response teams), and someplace to go (receiving facilities). Any of these avenues can be the door to other behavioral health services and supports, such as routine individual, group, and family therapy, multidisciplinary treatment teams like Florida Assertive Community Treatment (FACT) and Community Action Treatment (CAT). There are also residential treatment options for individuals who require more extensive care at a higher acuity level, such as state mental health treatment facilities, short-term residential treatment centers, specialized therapeutic group homes, and statewide inpatient psychiatric programs – the latter two are only available for children.

Helplines

A variety of helplines operate in Florida providing someone to talk to as a first line effort when a person needs assistance. These include the Hope Line (part of the Hope Florida – A Pathway to Prosperity initiative), 2-1-1 (information and referral services), and 9-8-8 (providing emotional support and crisis counseling).

Mobile Response Teams

Mobile Response Teams are available 24-hours a day and 7-days a week to provide clinical and peer professionals that respond to schools or at home so that individuals are not required to visit a hospital or emergency room when experiencing mental health distress. Teams respond to calls within one hour to help de-escalate situations; identify coping strategies; and develop safety plans to keep someone from harming themselves and avoid an unnecessary hospital or emergency room visit.

According to a review of 2019-2022 Florida Mobile Response Teams, which served youth and young adults under 25 years of age, approximately 82 percent of engagements result in community stabilization rather than a Baker Act. After the immediate crisis is resolved, the Mobile Response Team stays in contact until the person is connected to other services and supports. This could include routine outpatient services, care coordination, or other recovery support services. In FY 2022-2023, the Department will use additional state funding to expand mobile response teams to serve all ages by either adding staff to teams, allowing them to respond more rapidly or expanding teams that cover multiple counties.

Outpatient Therapy

Individuals with behavioral health issues can enter outpatient therapy to receive clinical services to learn to manage symptoms of depression, anxiety, any mental health condition, or past trauma before a crisis arises.

Care Coordination

Care Coordination is for adults or children who need additional assistance accessing available services and resources within their communities. Care Coordination helps individuals navigate the many systems that they encounter including behavioral health, primary care, peer and natural supports, housing, education, vocation, and the justice systems.

Florida Assertive Community Treatment (FACT)

FACT teams serve adults with serious mental illness with the goal to prevent recurrent hospitalization and incarceration, as well as improve community involvement and quality of life for participants. FACT teams are an effective model for preventing the need for more intensive services and serve as a step-down from inpatient settings. In FY 2022-2023, the Department will expand FACT teams and create similar programs for individuals who can benefit from services that are more intensive than routine outpatient therapy.

Community Action Treatment (CAT)

Utilizing an in-home/on-site team approach, the CAT model activates a team of skilled individuals to address the needs of young persons (and their families) ages 11 - 21 with a mental health diagnosis or co-occurring substance use disorder and complex needs to improve functioning and management of their illness. The goal of CAT is to assist young people in successfully remaining with their families and staying connected to their community. In FY 2022-2023, the Department will expand CAT and create similar programs for individuals who can benefit from services that are more intensive than routine outpatient therapy.

First Episode Psychosis

First Episode Psychosis care is a team-based model for adolescents and young adults experiencing symptoms of early serious mental illness. This evidence-based approach builds connections to services that are important to helping the young person and their family navigate this difficult experience and teach them to manage their symptoms. This can help reduce future crisis episodes, prevent disability, and promote full recovery.

Short-term Residential Treatment

Short-term Residential Treatment (SRT) provides a high level of care for adults who are no longer experiencing a psychiatric emergency but who are still in need of additional around-the-clock inpatient treatment prior to returning home or to another community placement. This is one option that health care professionals pursue when an individual continues to need 24-hour psychiatric services after the 72-hour Baker Act evaluation period. SRT benefits individuals who are transferred from a Baker Act receiving facility and helps ensure there is capacity to serve those who are in acute crisis and in need of receiving facility services. Additionally, SRTs can:

- Serve as a less restrictive alternative to a state mental health treatment facility;
- Allow the treatment team time to complete discharge planning by arranging continued treatment in the community and addressing treatment barriers such as housing and transportation; and,
- Prevent rapid readmission to the Baker Act receiving facility.

Statewide Inpatient Psychiatric Program

Statewide Inpatient Psychiatric Program (SIPP) is a secure residential treatment program for children and adolescents up to age 21 who exhibit the most severe symptoms of mental and emotional distress. This setting offers intensive treatment in a multidisciplinary approach to stabilize and improve the youth's ability to take significant steps towards recovery. This is the highest and most restrictive level of care, and it must be recommended by a psychiatrist or psychologist. SIPP's primary goal is to stabilize youth so that they can safely return to the care of their parents and/or guardians in the community with improved coping skills to prevent rapid readmission.

State Mental Health Treatment Facilities

State Mental Treatment facilities provide treatment in a secure setting for adults who are court ordered and have serious mental illness that cannot be treated safely in a less restrictive environment. Individuals remain in care until they have been deemed to no longer meet the criteria.

V. Appendices

Appendix A: Additional Technical Notes

The Baker Act data analyzed for this report are from involuntary examination forms received by the Baker Act Reporting Center. Some individuals for whom forms were received were never admitted to the receiving facility because an examination by a physician or psychologist performed prior to admission determined they did not meet admission criteria.¹³ The data also do not include information on what occurred after the initial examination. For example, the data do not reveal how long individuals stayed at the facility, whether they remained on an involuntary or voluntary basis, or whether the involuntary (Baker Act) examination was converted to a Marchman Act assessment. Because not everyone who has an involuntary examination initiated is admitted to a Baker Act receiving facility, the data in this report are of *involuntary examinations*, not admissions data, and not counts of *voluntary* examinations.

Redaction: Small cell sizes were redacted from this report. This redaction is done to prevent identification of individuals. Those interested in more information about the Baker Act Reporting Center’s approach to redaction may contact Annette Christy, Center Director at achristy@usf.edu.

Counts of Involuntary Examinations vs. Counts of Individuals: This report includes both counts of involuntary examinations (Section III) and counts of individuals who received involuntary examinations (Section IV). These categories were reported separately to avoid confusion. Those who write about the findings of this report are cautioned to be careful to not confuse counts of involuntary examinations with counts of individuals who received involuntary examinations. Center Director, Annette Christy, may be contacted to clarify as needed at achristy@usf.edu.

Percent Change: Percent change is reported throughout this report. This is a helpful metric that can put counts of involuntary examinations into context. However, certain issues with using percent change need to be considered. Percent change needs to be interpreted carefully when the change is between *small numbers*. For example, an increase in County A from 4 to 8 is a 100% increase, just as a change in County B from 1,000 to 2,000 is a 100% increase. *The challenge is to interpret what importance should be given to this percent change when determining whether there is a problem to be addressed and how to address it.* What these counts represent out of the total population needs to also be considered. For example, County A has a population of 50,000. Four equals a rate of 8 per 100,000, while 8 equals a rate of 16 per 100,000 for County A. County B has a population of 500,000. This means that 1,000 equals a rate of 200 per 100,000 and 2,000 equals a rate of 400 per 100,000. The rate in County B is much higher than the rate in County A even though the percent increase is the same. Some counties may have large percentages of change, but because their counts were low in relation to other counties to begin with, the increase over time may still mean that their rate per 100,000 is still smaller relative to other counties. The Indiana Department of Health has a webpage that describes this issue. This site suggests using a “rule of twenty” when examining rates, where there “should be at least twenty events in the numerator in order to produce a stable rate.” There is no hard and fast rule in this regard, but this rule of twenty provides a concept about when to consider a rate unstable.

¹³ An item was added to the Cover Sheet (form CF-MH3118) in May 2020 for Baker Act receiving facility staff to indicate if the person was admitted. Compliance with the use of the new Cover Sheet or completion of this variable on the Cover Sheet was poor. This means that the data from this variable for FY 2020-2021 is not of sufficient quality to yield meaningful information. We will, however, be able to report on this variable in future years.

Context Matters: What is being measured matters. For example, if we are measuring readmissions to a state hospital over a three-year period an increase from 8 to 16 may have meaning. But if we are measuring, for example, deaths by suicide for 12 to 14-year-old youth, this same 100% increase from 8 to 16 may be meaningful in a different way, and perhaps more concerning. What is occurring at the state level and in the community of focus as it relates to what is being measured needs to be considered. Was there some sort of catastrophic event, such as a hurricane or a severe economic downturn? How do the characteristics of the community of focus impact what is being measured? Is access to services different between the two communities being compared, such as access to Baker Act receiving facilities? The point here is that the percent change is just a number. Figuring out what it means and how to compare it between communities requires learning more about those communities. The numbers in this report are only a start to understanding relevant issues.

There are complex reasons for the lower numbers of involuntary examinations in some areas and higher numbers in other areas. Readers of this report are urged to consider these factors when interpreting the results. For example, the distribution of Baker Act receiving facilities statewide is not uniform. About half of Florida's 67 counties have at least one Baker Act receiving facility and the others do not have any. Areas of some counties are geographically distant from the nearest receiving facility. Additional factors may influence the use of involuntary examinations, such as:

- Number of people trained in Mental Health First Aid,
- Law enforcement training, including Crisis Intervention Training (CIT),
- Availability of criminal justice system diversion programs at all sequential intercepts, including those funded by Criminal Justice, Mental Health, and Substance Abuse (CJMHS) Reinvestment Grants,
- Availability and quality of community-based behavioral health services, including Mobile Response Teams (MRTs), Florida Assertive Community Treatment (FACT), and Community Action Treatment (CAT) Teams,
- Availability of a wide array of social services, such as assistance with housing, coverage for health care, and existence of county funds for those who are underinsured or uninsured, and
- How facilities approach the admission status (voluntary or involuntary) for children based on the logistics of holding the required voluntariness hearing for children.

Terminology: Involuntary examinations occur at designated *receiving facilities*. Receiving facilities may include hospitals (licensed under Chapter 395, F.S.) and Crisis Stabilization Units (licensed under Chapter 394, F.S.). The Department designates all Baker Act receiving facilities regardless of type. Some receiving facilities are called Crisis Stabilization Units (CSUs). CSUs are usually residential units of community mental health centers and receive Department funds for Baker Act services. CSUs designated for children are referred to as Children's Crisis Stabilization Units (CCSUs). This means that while all CSUs/CCSUs are Baker Act receiving facilities, not all Baker Act receiving facilities are CSUs. The abbreviations CSU and CCSU are used throughout this report. Receiving facilities that are provided funds from the Department are referred to later in this report as "public," while those not receiving such funds are referred to as "private."

Unknown/Not Reported Values: The age necessary for analyses by age groups is computed by subtracting the person's date of birth as reported on the Cover Sheet (form CF-MH3118) from the date of examination initiation on the law enforcement initiation form, professional certificate, or ex-parte order. Age cannot be determined and is reported as "unknown" if the date of birth is not provided or if it is not legible. The county of residence reported on the Cover Sheet is used to categorize involuntary examinations geographically, such as by Department Region, Managing Entity area, and Judicial Circuit. The "not reported" category for presentation of information by geographic areas means that the county of residence was not reported on the Cover Sheet.

Population Statistics: Population statistics are provided in some tables to put counts of involuntary examinations in context. Population estimates were obtained from the Florida Office of Economic and Demographic Research. County level characteristics were obtained from the Florida Department of Health, Division of Public Health Statistics and Performance Management, and Florida Health Charts. While this report focuses on counts by fiscal years, estimates of population are available by calendar year. Logical calendar year spans are used to provide context.

Unique Person Identifier: A unique person identifier was created using available data. Social security number could have been used as a unique identifier if the data were complete enough for this purpose. The Cover Sheet (form CF-MH3118) requires reporting of the full social security number. However, the percentage of missing social security numbers precluded researchers from using it as a unique person identifier.

*Link King*¹⁴ software was used to identify individuals and create a unique ID using both deterministic and probabilistic matching algorithms. The probabilistic algorithms used by *Link King* were developed by MEDSTAT for the Substance Abuse and Mental Health Administration's (SAMHSA) Integrated database project. The program is capable of recognizing use of nicknames, hyphenated names, misspelled names, transposed social security number digits, and transposed date fields. A minimum of first name, last name, and either date of birth or social security number is required for matching. There were only 463 records of involuntary examinations in Fiscal Year 2019-2020 that did not have the minimum information for matching. Uncertain matches and a sample of successfully matched records were manually reviewed for accuracy.

Counting Repeated Involuntary Examinations: The Unique Person Identifier was used to count repeated involuntary examinations. Information about repeated involuntary examinations for 1 year and 3 years is included in this report for all ages, adults, and children. Involuntary examinations for which age is not known cannot be included in tables that report results for adults and children because the age is necessary to categorize individuals into age groups. Also, individuals who have at least one examination as a child and one as an adult during the year were counted in both the adult and child tables. For example, a person who, during one year, had two involuntary examinations when they were 17 and one after they turned 18 would count as one person with three involuntary examinations in the "all ages" table, as one child with two examinations in the child table, and one adult with one examination in the adult table. For these reasons, the counts of individuals and examinations in the tables counting repeated examinations do not add up to the total of individuals and examinations earlier in the report. The counts of individuals for all ages also varies slightly from the combined counts of adults and children. These differences are small and do not impact the overall meaning of the results.

To look at repeated involuntary examinations for adults, first the number of adults with one examination is counted, two examinations, three examinations, and so forth on up to the person with the most examinations in the year. Counts of the number of examinations in a year is in column number one below. Grouping numbers of examinations into categories at higher numbers of examinations (such as 6-10, and 11+) is done to avoid reporting small cell sizes. For example, 89,996 individuals (column 2) accounting for 73.82% of individuals with involuntary examinations in Fiscal Year 2020-2021 (column 3) had one involuntary examination, 17,897 (column 2) had two involuntary examinations accounting for 14.68% (column 3) of individuals with involuntary examinations and so forth.

¹⁴ See [The Link King and Rule Your Data with The Link King©](#) (a SAS/AF® application for record linkage and unduplication)

The number reported in columns 4 and 5 allow the percentage of examinations out of the total number of examinations that individuals with various numbers of involuntary examinations account for during Fiscal Year 2020-2021 to be seen. For example, while the 796 individuals with between 11 and 20 involuntary examinations accounted for less than 1% (0.65%) of individuals with an involuntary examination, their examinations accounted for 4.06% of the total involuntary examinations for the year.

Example Table: Repeated Involuntary Examinations for Individuals of All Ages Statewide in Fiscal Year 2020-2021

1	2	3	4	5
Examinations FY20-21	Count of Individuals	Percent Individuals	Count of Examinations	Percent Examinations
1	89,996	73.82%	89,996	46.23%
2	17,897	14.68%	35,794	18.39%
3	6,315	5.18%	18,945	9.73%
4	2,987	2.45%	11,948	6.14%
5	1,565	1.28%	7,825	4.02%
6-10	2,246	1.84%	17,764	9.12%
11-20	796	0.65%	7,895	4.06%
20+	119	0.10%	4,513	2.32%
Total	121,921 individuals		194,680 involuntary examinations	
Total		100.00%		100.00%

Appendix B: Suicide and Suicide Prevention

If you or someone you know is thinking about suicide, please call or text the [Suicide and Crisis Lifeline](#) at 988 or chat at [988lifeline.org](#). Call 211 to be linked to a [Florida Alliance of Information Referral Services](#) provider for your community to learn more about resources on a wide array of health and social service needs. The Baker Act Reporting Center also maintains a list of resources that may be helpful (click on “[For the General Public](#)”).

This brief section provides resources for those interested in additional information about suicide and suicide prevention. The Statewide Office for Suicide Prevention (SOSP) and the Suicide Prevention Coordinating Council focus on suicide prevention initiatives such as creating and implementing the statewide plan for suicide prevention in Florida as well as increasing public awareness. The SOSP is administratively housed in the Department’s Office of Substance Abuse and Mental Health. Those interested in learning additional information about suicide prevention initiatives and research are encouraged to view the [2020-2023 Florida Suicide Prevention Interagency Action Plan](#) and the [Suicide Prevention Coordinating Council 2021 Annual Report](#).

Following are links to resources relevant to suicide prevention that provide helpful information:

- The [988 Suicide and Crisis Lifeline](#) went live nationwide in the Summer of 2022. This includes a phone line that can be reached by calling 988 and the ability to chat by texting (see [988.lifeline.org](#)).
- Florida Department of Children and Families, [Suicide Prevention Webpage](#)
- Florida Department of Health, [Suicide Prevention Webpage](#)
- [Florida Health Charts](#) dashboard of suicide data
- [Suicide Prevention Resource Center](#)
- [Florida Health Rankings](#)
- The Centers for Disease Control and Prevention Center, National Center for Health Statistics, [Suicide Mortality by State](#)
- American Foundation for Suicide Prevention [State Fact Sheets](#)
- National Institute of Mental Health at the NIH [Suicide Information](#)
- [Suicide Prevention: An Emerging Priority for Health Care](#) article in *Health Affairs* (2016) by Hogan and Grumet is available at no cost to the public and provides an excellent overview.
- Technical Issues with Suicide Data: The Suicide Prevention Resource Center (SPRC) report, “[Interpreting Suicide Data: Special Considerations for Small Populations](#)” provides important information to consider. The SPRC is a resource that readers of this report may find helpful in general, such as a [resource for training](#) and to learn about state activities for [all states](#) and specific to [Florida](#).
- [Zero Suicide](#) “is a quality improvement model that transforms system-wide suicide prevention and care to save lives.” This includes resources such as research articles, outcome stories, a toolkit, and training.

Appendix C: Mobile Response Teams

The Marjory Stoneman Douglas High School Public Safety Act, Chapter 2018-3, Laws of Florida, created a statewide network of Mobile Response Teams (MRTs). In 2020, House Bill 945 amended section 394.495, Florida Statutes, to include MRT in the child and adolescent array of services, outline programmatic requirements, and expand MRT eligibility to include children that are served by the child welfare system and are experiencing or at risk of experiencing placement instability. MRTs provide readily available crisis care in the community and increase opportunities to stabilize individuals in the least restrictive setting to avoid the need for hospital or emergency department utilization. The Managing Entities contract with providers for MRTs, with statewide access to this service. During this reporting period, 39 MRTs, a list of which can be accessed at <https://www.MyFIFamilies.com/service-programs/samh/treatment-maps.shtm>. In 2022, additional funding was obtained to expand the total number of MRT Teams to 52, serving an estimated 24,804 additional persons annually to include adults over 25 years of age. These Teams are currently being finalized through contract procurement, addendums, etc. to be implemented for FY 2022 – 2023.

Statewide MRT data for Fiscal Year 2020-2021 provided by the Department is shown in Figure C.

The goals of MRTs are to lessen trauma, conduct an independent assessment to determine if the individual may be safely diverted from emergency departments, prevent unnecessary psychiatric hospitalization, and divert from juvenile justice or criminal justice settings. Mobile response services are available 24 hours a day, 7 days a week, 365 days a year. Services are provided by a team of licensed professionals, master’s level professionals, and paraprofessionals trained in crisis intervention skills. In addition to helping resolve the crisis, MRTs work with individuals and families to identify resources, provide linkages, and develop strategies for effectively dealing with potential future crises.

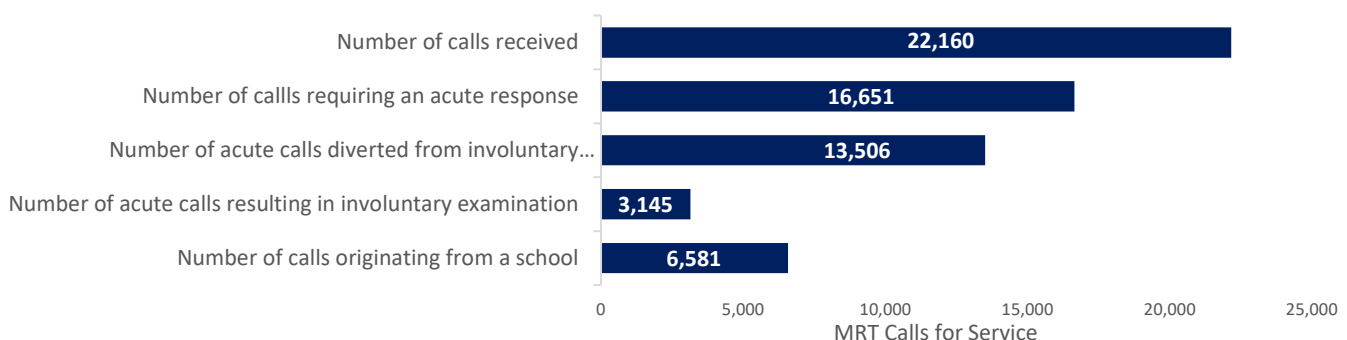

Intervention is warranted when a crisis interferes with the ability to function and places the individual at risk of self-harm, harm to others, or disruption of services or living environment. The individual may present with an overt change in functioning or have difficulty coping with traumatic life events. Mobile Response Teams may coordinate in-person services with law enforcement to provide additional safety, when appropriate and necessary.

During FY 2020-2021, MRTs provided immediate, onsite behavioral health crisis services at minimum to individuals who are 25 and younger who:

1. Have an emotional disturbance or,
2. Are experiencing a mental health or emotional crisis or,
3. Are experiencing escalating emotional or behavioral health reactions and symptoms that impact their ability to function typically within the family, living situation, or community environment, or
4. Are served by the child welfare system and are experiencing or at high risk of placement instability.

Figure C shows data provided by the Managing Entities to the Department. In FY 2020-2021 there were a total of 22,160 calls to MRTs funded by the Department, with 30 percent of calls originating from schools. Of the total calls received, more than half (75 percent) required an acute response. However, the majority (81 percent) of calls requiring an acute response resulted in community stabilization rather than an involuntary examination. Please note that there are MRTs that are funded by other entities, such as school districts and law enforcement agencies. Counts for these MRTs are not included in this appendix.

Figure C: Statewide MRT Data for Fiscal Year 2020-2021

Appendix D: County Specific Summaries

One-page summaries of information for each county follow. A statewide summary page is provided on the next page so that readers of this report may compare the information on each county page to statewide values. The county of residence as provided on the Cover Sheet (form CF-MH3118) was used to categorize involuntary examinations according to county.

Florida

This page is provided to facilitate the comparison of the following pages with county level information to statewide values.

Part 1: Involuntary Examination Level Analyses

Physicians (who are not Psychiatrists) (64.89%) were the most common health professionals to initiate involuntary examinations, followed by Mental Health Counselors (12.85%), Psychiatrists (8.99%), Clinical Social Workers (6.25%), Psychiatric Nurses (1.97%), Not Reported (1.66%), Physician Assistants (1.54%), Clinical Psychologists (<1%), Marriage and Family Therapists (<1%), and Multiple Health Professional Types Entered (<1%).

Information about involuntary examinations of Florida residents for five years is shown in Table A.

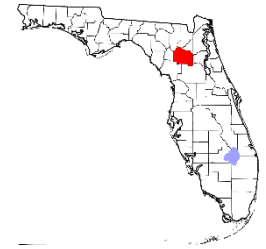

Table A: Involuntary Examinations: Residents of Florida County for Five Fiscal Years*

Fiscal Year	Involuntary Exams (All Ages)	Involuntary Examinations										
		% of Total				% of Total by Initiator Type			% Change from			
		<18	18-24	25-64	65+	Law Enforcement	Health Professional	Ex-Parte	1 Year		5 Years	
									BA Exams FY19/20 to FY20/21	Pop* 2019 to 2020	BA Exams FY16/17 to FY20/21	Pop * 2016 To 2020
2020-2021	194,680	19.81%	12.69%	59.26%	6.83%	52.93%	45.02%	2.05%	-3.91%	1.75%	-2.63%	6.97%
2019-2020	202,598	17.75%	12.37%	61.44%	7.30%	51.89%	46.13%	1.98%				
2018-2019	210,992	17.95%	12.63%	60.69%	7.33%	51.34%	46.45%	2.22%				
2017-2018	205,781	17.53%	12.79%	60.75%	7.41%	51.67%	46.31%	2.02%				
2016-2017	199,944	16.38%	13.13%	62.14%	7.18%	50.32%	47.71%	1.97%				

*Population estimates are available by calendar year only. For example, calendar year 2020 population estimates were used for the row showing FY20/21 data, and so on.

County: Alachua

This county page can be compared to the counts in the Florida Statewide Totals on [page 57](#). Alachua County is in the Department's Northeast region and Florida Judicial Circuit 8. Lutheran Services Florida is the Managing Entity for Alachua County. In Fiscal Year 2020-2021 there were 2,437 involuntary examinations for 270,405 residents of Alachua County.

Involuntary Examination Level Analyses

The majority of Alachua County residents who received an involuntary examination were seen at UF Health Shands Psychiatric Hospital (57.12%), Meridian Behavioral Health Care - Gainesville (18.67%), and HCA Florida North Florida Hospital (12.56%).

Physicians (who are not Psychiatrists) (59.80%) were the most common health professionals to initiate involuntary examinations, followed by Mental Health Counselors (22.31%), Clinical Social Workers (6.71%), Psychiatrists (5.56%), Not Reported (1.90%), Physician Assistants (1.90%), Psychiatric Nurses (1.42%), Clinical Psychologists (<1%), Marriage and Family Therapists (<1%), and Multiple Health Professional Types Entered (<1%).

Information about involuntary examinations of Alachua County residents for five years is shown in Table A.

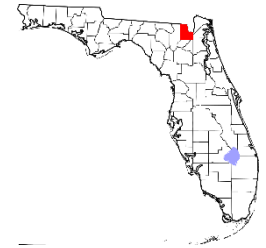

Table A: Involuntary Examinations: Residents of Alachua County for Five Fiscal Years*

Fiscal Year	Involuntary Exams (All Ages)	Involuntary Examinations										
		% of Total				% of Total by Initiator Type			% Change from			
		<18	18-24	25-64	65+	Law Enforcement	Health Professional	Ex-Parte	1 Year		5 Years	
									BA Exams FY19/20 to FY20/21	Pop* 2019 to 2020	BA Exams FY16/17 to FY20/21	Pop* 2016 To 2020
2020-2021	2,437	29.22%	15.06%	49.73%	5.01%	37.01%	60.53%	2.46%	24.78%	1.41%	-0.29%	5.02%
2019-2020	1,953	23.35%	16.28%	53.05%	6.96%	38.45%	59.29%	2.25%

2017-2018	2,573	23.24%	16.75%	53.98%	4.78%	40.26%	58.14%	1.59%				
2016-2017	2,444	22.30%	16.65%	55.28%	5.44%	38.46%	58.96%	2.58%				

*Population estimates are available by calendar year only. For example, calendar year 2020 population estimates were used for the row showing FY20/21 data, and so on.

County: Baker

This county page can be compared to the counts in the Florida Statewide Totals on [page 57](#). Baker County is in the Department's Northeast region and Florida Judicial Circuit 8. Lutheran Services Florida is the Managing Entity for Baker County. In Fiscal Year 2020-2021 there were 280 involuntary examinations for 28,588 residents of Baker County.

Involuntary Examination Level Analyses

The majority of Baker County residents who received an involuntary examination were seen at Meridian Behavioral Health Care - Lake City (75.00%).

Physicians (who are not Psychiatrists) (41.86%) were the most common health professionals to initiate involuntary examinations, followed by Mental Health Counselors (27.91%), Clinical Social Workers (22.09%), Psychiatrists (5.81%), Not Reported (1.16%), Physician Assistants (1.16%), Clinical Psychologists (<1%), Marriage and Family Therapists (<1%), Psychiatric Nurses (<1%), and Multiple Health Professional Types Entered (<1%).

Information about involuntary examinations of Baker County residents for five years is shown in Table A.

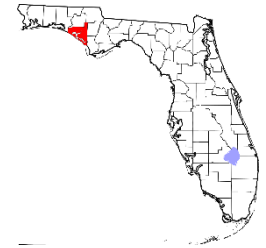

Table A: Involuntary Examinations: Residents of Baker County for Five Fiscal Years*

*Population estimates are available by calendar year only. For example, calendar year 2020 population estimates were used for the row showing FY20/21 data, and so on.

County: Bay

This county page can be compared to the counts in the Florida Statewide Totals on [page 57](#). Bay County is in the Department's Northwest region and Florida Judicial Circuit 14. NWF Health Network is the Managing Entity for Bay County. In Fiscal Year 2020-2021 there were 1,206 involuntary examinations for 175,776 residents of Bay County.

Involuntary Examination Level Analyses

The majority of Bay County residents who received an involuntary examination were seen at Emerald Coast Behavioral Hospital (45.44%), Life Management Center of Northwest Florida (29.27%), and HCA Florida Fort Walton - Destin Hospital (17.91%).

Physicians (who are not Psychiatrists) (56.44%) were the most common health professionals to initiate involuntary examinations, followed by Mental Health Counselors (16.34%), Psychiatrists (10.89%), Clinical Social Workers (8.17%), Psychiatric Nurses (3.96%), Physician Assistants (2.48%), Not Reported (<1%), Multiple Health Professional Types Entered (<1%), Clinical Psychologists (<1%), and Marriage and Family Therapists (<1%).

Information about involuntary examinations of Bay County residents for five years is shown in Table A.

*Population estimates are available by calendar year only. For example, calendar year 2020 population estimates were used for the row showing FY20/21 data, and so on.

County: Bradford

This county page can be compared to the counts in the Florida Statewide Totals on [page 57](#). Bradford County is in the Department's Northeast region and Florida Judicial Circuit 8. Lutheran Services Florida is the Managing Entity for Bradford County. In Fiscal Year 2020-2021 there were 289 involuntary examinations for 28,818 residents of Bradford County.

Involuntary Examination Level Analyses

The majority of Bradford County residents who received an involuntary examination were seen at Meridian Behavioral Health Care - Gainesville (42.21%), UF Health Shands Psychiatric Hospital (25.26%), HCA Florida North Florida Hospital (12.11%), and Meridian Behavioral Health Care - Lake City (5.54%).

Physicians (who are not Psychiatrists) (51.47%) were the most common health professionals to initiate involuntary examinations, followed by Clinical Social Workers (24.26%), Mental Health Counselors (11.76%), Not Reported (3.68%), Physician Assistants (3.68%), Psychiatrists (2.94%), Psychiatric Nurses (1.47%), Clinical Psychologists (<1%), Marriage and Family Therapists (<1%), and Multiple Health Professional Types Entered (<1%).

Information about involuntary examinations of Bradford County residents for five years is shown in Table A.

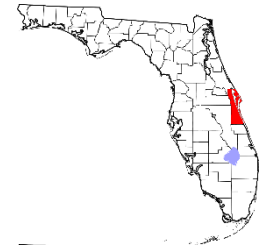

Table A: Involuntary Examinations: Residents of Bradford County for Five Fiscal Years*
