Tim Sadberry, Staff Director
Senate Committee on Appropriations
201 Capitol
Tallahassee, Florida 32399-1300

Dear Directors:

Pursuant to Chapter 216, Florida Statutes, our Legislative Budget Request for the Florida Department of Law Enforcement is submitted in the format prescribed in the budget instructions. The information provided electronically and contained herein is a true and accurate presentation of our proposed needs for the 2021-22 Fiscal Year.

Sincerely,

Richard L. Swearingen
Commissioner

FLORIDA DEPARTMENT OF LAW ENFORCEMENT

Request for Approval Temporary Special Duty – General Pay Additives Implementation Plan For Fiscal Year 2021-22

In accordance with previous rule authority established in 60L-32.0012, Florida Administrative Code, the Florida Department of Law Enforcement has used existing rate and salary appropriations to grant pay additives when warranted based on the duties and responsibilities of the position.

Temporary special duty additives are a valuable management tool which allows agencies to compensate employees for identified additional duties which are not permanent in nature.

Pay Additive – General

The agency requests approval to continue to grant a pay additive up to 15 percent of employee base salary or agency minimum, whichever is greater to staff who are temporarily assigned higher level duties and responsibilities not customarily associated with a position.

Pay Additive – Absent Coworker

The agency requests approval to continue to grant a pay additive up to 15 percent of employee base salary or agency minimum, whichever is greater to staff who are temporarily assigned duties and responsibilities of a coworker who is absent from work due to authorized Family and Medical Leave Act or military leave.

For both pay additive scenarios addressed in this plan, the additive will begin on the first day of special duties being assumed and continue for up to 90 days. After this 90-day period, the agency will reassess the need for the additive and address accordingly.

During fiscal year 2019-20, the agency implemented a total of twenty-seven temporary special duty additives, all of which would fall within the scenarios described above. The positions granted included the following classes; Administrative Assistant II, Forensic Technologist, Crime Laboratory Analyst, Senior Crime Intelligence Analyst I, Crime Intelligence Analyst II, Crime Laboratory Technician, Government Analyst II, Government Operations Consultant I, Law Enforcement Officer, Purchasing Manager, Research & Training Specialist, Special Agent. The agency expended approximately \$41,912 on these twenty-seven additives. The agency anticipates expenditures to be comparable to those in prior years.

The following Collective Bargaining Agreements contain language regarding Temporary Special Duty:

State of Florida and the Police Benevolent Association – Law Enforcement

Article 21 Compensation for Temporary Special Duty in Higher Level Position, Section 1

State of Florida and the Police Benevolent Association – Special Agent

Article 21 Compensation for Temporary Special Duty in Higher Level Position, Section 1

AFSCME Master Contract

Article 21 Compensation for Temporary Special Duty in Higher Level Position, A

Schedule VII: Agency Litigation Inventory

For directions on completing this schedule, please see the "Legislative Budget Request (LBR) Instructions" located on the Governor's website.

Agency:	Florida Department of Law Enforcement		
Contact Person:	James D. Martin	Phone Number:	850-410-7679
Names of the Case: (If no case name, list the names of the plaintiff and defendant.)	National Rifle Association of America, Inc. vs. Ashley Moody, Attorney General of Florida & Richard Swearingen, Commissioner, Florida Department of Law Enforcement		
Court with Jurisdiction:	United States District Court, Northern District of Florida		
Case Number:	4:18-cv-00137-MW-CAS		
Summary of the Complaint:	Declaratory and Injunctive action challenging the law, Section 790.065(13), Florida Statutes, which prohibits the sale of firearms to persons under the age of 21. The complaint alleges that the law is unconstitutional under the Second and Fourteenth Amendments to the United States Constitution.		
Amount of the Claim:	\$ N/A		
Specific Statutes or Laws (including GAA) Challenged:	Section 790.065(13), Florida Statutes		
Status of the Case:	Motions for Summary Judgment filed by both parties are pending disposition with the Court.		
Who is representing (of record) the state in this lawsuit? Check all that apply.	<input type="checkbox"/>	Agency Counsel	
	<input checked="" type="checkbox"/>	Office of the Attorney General or Division of Risk Management	
	<input type="checkbox"/>	Outside Contract Counsel	
If the lawsuit is a class action (whether the class is certified or not), provide the name of the firm or firms representing the plaintiff(s).			

Schedule VII: Agency Litigation Inventory

For directions on completing this schedule, please see the "Legislative Budget Request (LBR) Instructions" located on the Governor's website.

Agency:	Florida Department of Law Enforcement		
Contact Person:	James D. Martin	Phone Number:	850-410-7679
Names of the Case: (If no case name, list the names of the plaintiff and defendant.)	Christopher Pretzer, Mark Wood, Richard A. Barsky, Richard Chamnes, Edward Henry, Florida Carry, Inc., and U.S. Lawshield Legal Expense Insurance Corp., vs. Rick Swearingen and Florida Department of Law Enforcement		
Court with Jurisdiction:	Second Judicial Circuit Court, Leon County, Florida		
Case Number:	37-2019-CA-1123		
Summary of the Complaint:	Declaratory and Injunctive action challenging the law related to background checks conducted by FDLE on individuals attempting to purchase firearms under sections 790.065 and 790.0655, Florida Statutes.		
Amount of the Claim:	\$ 100 per day of delay of the right to purchase a firearm		
Specific Statutes or Laws (including GAA) Challenged:	Section 790.065 and 790.0655, Florida Statutes		
Status of the Case:	Case currently stayed pending appeal of the Court's Temporary Order Granting Plaintiff's Emergency Ex-Parte Motion for Protection of Evidence.		
Who is representing (of record) the state in this lawsuit? Check all that apply.	<input type="checkbox"/>	Agency Counsel	
	<input type="checkbox"/>	Office of the Attorney General or Division of Risk Management	
	<input checked="" type="checkbox"/>	Outside Contract Counsel	
If the lawsuit is a class action (whether the class is certified or not), provide the name of the firm or firms representing the plaintiff(s).			

Schedule VII: Agency Litigation Inventory

For directions on completing this schedule, please see the "Legislative Budget Request (LBR) Instructions" located on the Governor's website.

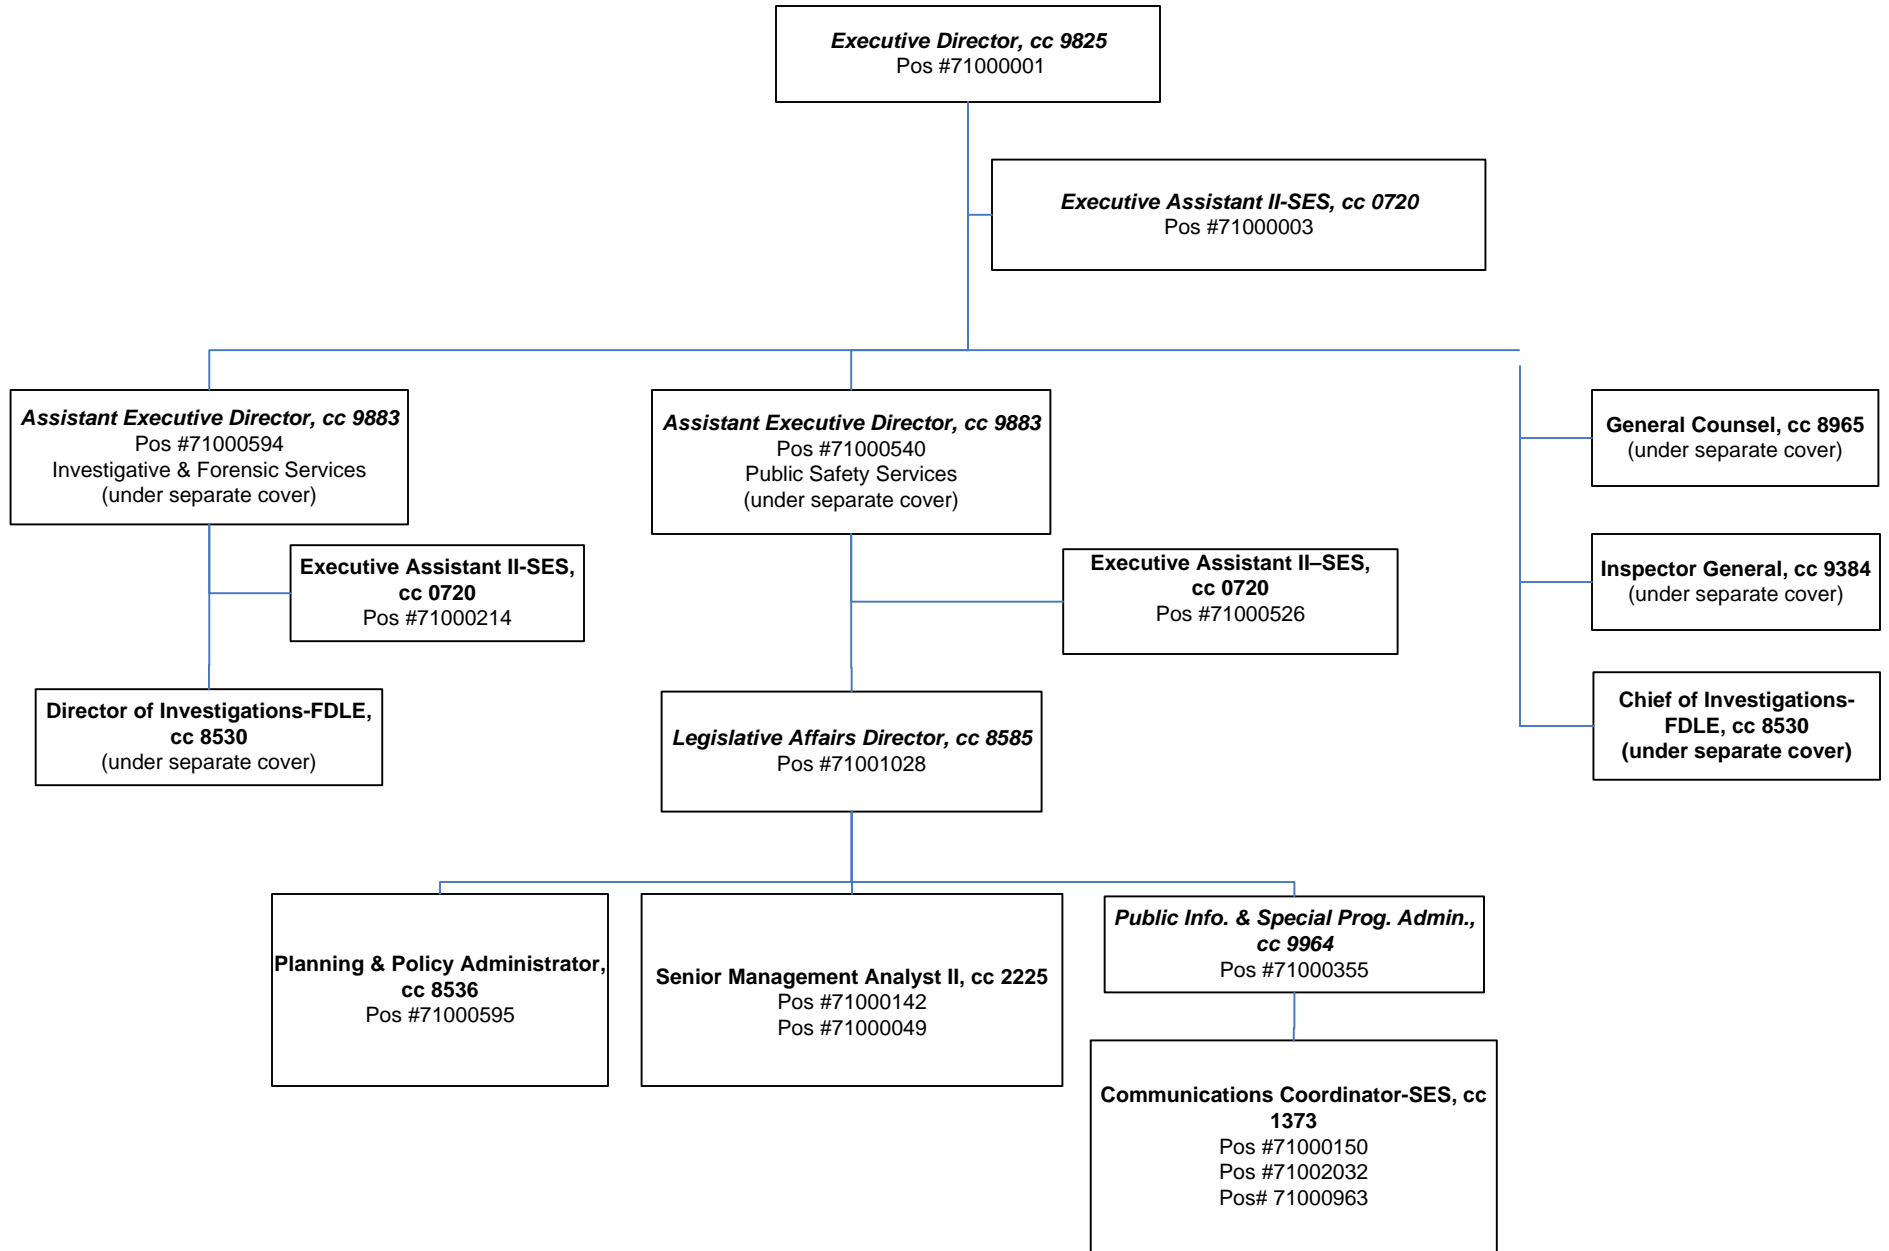

Agency:	Florida Department of Law Enforcement		
Contact Person:	James D. Martin	Phone Number:	850-410-7679
Names of the Case: (If no case name, list the names of the plaintiff and defendant.)	Sean Caranna and Florida Carry, Inc. vs. Rick Swearingen and Florida Department of Law Enforcement		
Court with Jurisdiction:	Second Judicial Circuit Court, Leon County, Florida		
Case Number:	37-2019-CA-001973		
Summary of the Complaint:	Declaratory and Injunctive action challenging the law related to background checks conducted by FDLE on individuals attempting to purchase firearms under sections 790.065 and 790.0655, Florida Statutes. .		
Amount of the Claim:	\$ 100 per day of delay of the right to purchase a firearm		
Specific Statutes or Laws (including GAA) Challenged:	Section 790.065 and 790.0655, Florida Statutes		
Status of the Case:	An answer and affirmative defenses were filed in response to the complaint and the case is currently pending.		
Who is representing (of record) the state in this lawsuit? Check all that apply.	<input type="checkbox"/>	Agency Counsel	
	<input type="checkbox"/>	Office of the Attorney General or Division of Risk Management	
	<input checked="" type="checkbox"/>	Outside Contract Counsel	
If the lawsuit is a class action (whether the class is certified or not), provide the name of the firm or firms representing the plaintiff(s).			

Schedule VII: Agency Litigation Inventory

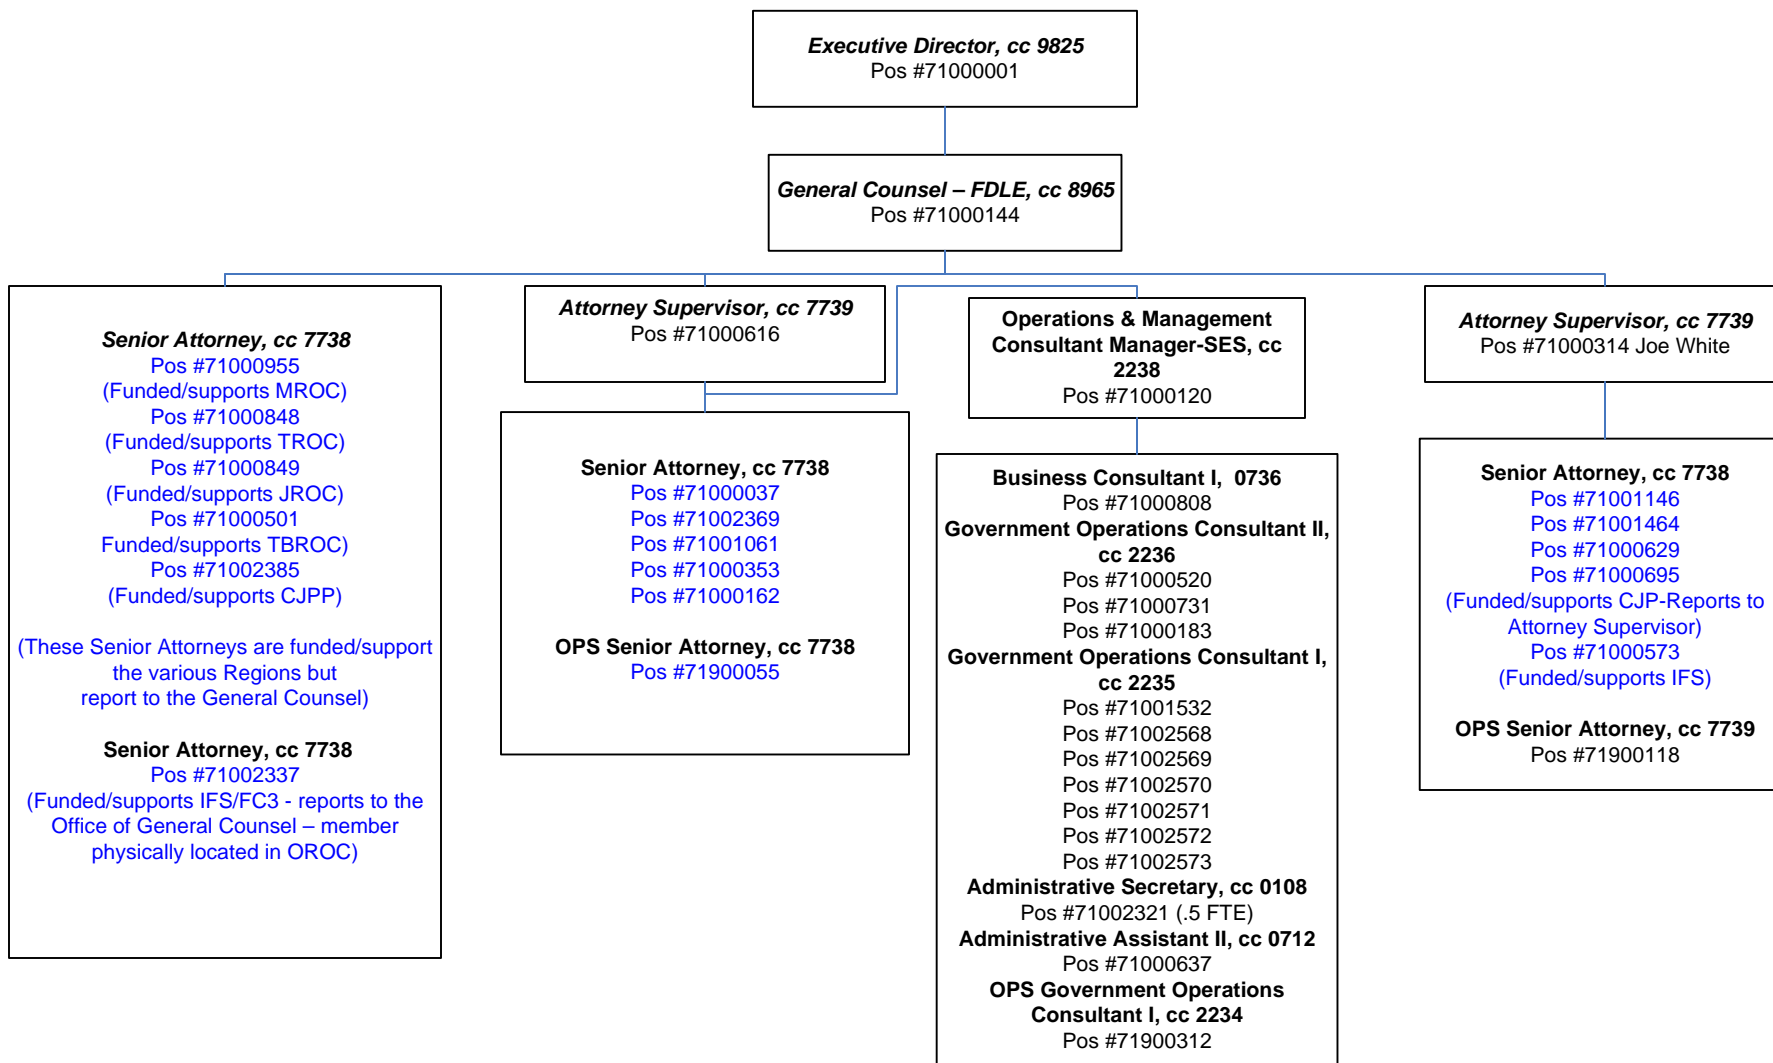

For directions on completing this schedule, please see the "Legislative Budget Request (LBR) Instructions" located on the Governor's website.

Agency:	Florida Department of Law Enforcement

**SCHEDULE XIII
PROPOSED CONSOLIDATED FINANCING OF DEFERRED-PAYMENT
COMMODITY CONTRACTS**

Contact Information
Agency: Florida Department of Law Enforcement
Name:
Phone:
E-mail address:

Deferred-payment commodity contracts are approved by the Department of Financial Services (department). The rules governing these contracts are in Chapter 69I-3, *Florida Administrative Code* and may be accessed via the following website <https://www.flrules.org/gateway/ChapterHome.asp?Chapter=69I-3> . Information on the program and other associated information on the Consolidated Equipment Financing Program and Guaranteed Energy Savings Contracts may be accessed via the following website <http://www.myfloridacfo.com/Division/AA/StateAgencies/default.htm> under the Financing tab.

For each proposed deferred-payment commodity contract that exceeds the threshold for Category IV as defined in Section 287.017, *Florida Statutes*, complete the following information and submit Department of Financial Services forms Lease Checklist DFS-A1-411 and CEFP Checklist DFS-A1-410 with this schedule.

1. Commodities proposed for purchase.
2. Describe and justify the need for the deferred-payment commodity contract including guaranteed energy performance savings contracts.
3. Summary of one-time payment versus financing analysis including a summary amortization schedule for the financing by fiscal year (amortization schedule and analysis detail may be attached separately).
4. Identify base budget proposed for payment of contract and/or issue code and title of budget request if increased authority is required for payment of the contract.

Schedule XIV
Variance from Long Range Financial Outlook

Agency: Florida Department of Law Enforcement Contact: Cynthia Barr

Article III, Section 19(a)3, Florida Constitution, requires each agency Legislative Budget Request to be based upon and reflect the long range financial outlook adopted by the Joint Legislative Budget Commission or to explain any variance from the outlook.

- 1) Does the long range financial outlook adopted by the Joint Legislative Budget Commission in September 2020 contain revenue or expenditure estimates related to your agency?

Yes No

- 2) If yes, please list the estimates for revenues and budget drivers that reflect an estimate for your agency for Fiscal Year 2021-2022 and list the amount projected in the long range financial outlook and the amounts projected in your Schedule I or budget request.

	Issue (Revenue or Budget Driver)	R/B*	FY 2021-2022 Estimate/Request Amount	
			Long Range Financial Outlook	Legislative Budget Request
a				
b				
c				
d				
e				
f				

- 3) If your agency's Legislative Budget Request does not conform to the long range financial outlook with respect to the revenue estimates (from your Schedule I) or budget drivers, please explain the variance(s) below.

* R/B = Revenue or Budget Driver

II. Schedule IV-B Business Case – Strategic Needs Assessment

A. Background and Strategic Needs Assessment

Purpose: To clearly articulate the business-related need(s) for the proposed project.

1. Business Need

Florida has participated in the Uniform Crime Reporting (UCR) program since 1971, collecting crime data and providing the information to the Federal Bureau of Investigation's (FBI) UCR program. There are approximately 400 Florida state and local agencies reporting UCR summary data to FDLE.

The FBI's UCR program is phasing out the Summary Reporting System (SRS) in 2021 in favor of incident-based crime reporting. It is necessary for states that report UCR summary data, such as Florida, to make the transition to incident-based crime reporting to participate in national crime reporting statistics and analytics.

Florida's state and local law enforcement agencies' eligibility for certain federal grant funds is dependent on submission of crime statistics to the FBI's "Crime in the U.S. Report". Beginning in 2021, the FBI will only accept incident-based crime data; therefore, Florida will need to submit the state's data in this new format to enable the law enforcement agencies to maintain their eligibility for annual federal funding.

To accommodate incident-based data, Florida's UCR Program must have a system capable of receiving and processing the data, as well as the capability to report in the National Incident Based Reporting System (NIBRS) format to the FBI.

Florida also generates and publishes crime statistical data for the state. While the current UCR SRS data could continue to be used for state statistics, summary data does not include the same level of detail, nor does it include all crime types that are included in NIBRS. Therefore, using summary data in Florida while all other states and the federal government transition to NIBRS would mean that Florida information could not be accurately report crime statistics compared to data from other states. Additionally, NIBRS provides higher quality and more accurate data along with additional context that agencies need to understand crime problems internally as well as to explain crime trends to their constituents.

NIBRS provides a mechanism to combine data from various law enforcement agencies to study multi-jurisdictional patterns and trends. While most law enforcement agencies have their own information systems with their data structures and codes, NIBRS standardizes the data across agencies so they can easily analyze across multiple jurisdictions.

The current data collection, analysis, validation, and dissemination processes are a mixture of manual and automated activities performed by many agency staff members that require the use of multiple, disparate information systems. Many of the processes associated with the summary reports are obsolete compared with current technical standards due to age and inflexible design characteristics. There are several areas where current processes do not meet end user needs. The FDLE staff depends greatly on manual processes to achieve business goals. Success depends on staff in approximately 400 agencies performing interdependent tasks in a timely and correct manner. Manual processes always carry the potential of introducing human error. Due to historical design constraints, it is not possible to upgrade the current disparate systems to meet the new requirements that would bring modern benefits in terms of both efficiency and timeliness of data to FDLE and its customers, such as elected officials, government agencies,

the general public, and the media.

Florida state and local law enforcement agencies currently submit separate data sets for UCR SRS, hate crime, domestic violence, human trafficking, and cargo theft based on Florida requirements. In addition, the FBI has recently established a process for collecting Use-of-Force data from law enforcement agencies. Many agencies also submit data to the Florida Data Sharing Project (FDSP) repositories, and the FDSP data set has significant overlap with these other data sets. Each of these data streams has its own data formats and processes for submitting data, and these disparate requirements add to the burden placed upon the staff at these agencies. While NIBRS includes human trafficking, cargo theft, hate crime, and domestic violence data, Florida collects additional data on hate crimes and domestic violence beyond what is required by NIBRS, and NIBRS does not include a significant portion of the necessary Use-of-Force data. Therefore, rather than requiring separate data streams to support NIBRS and non-NIBRS data requirements, Florida is using this opportunity to consolidate data submission to reduce the burden on state and local law enforcement agencies.

2. Business Objectives

In order to provide incident-based data to the FBI, continue grant eligibility for local agencies, and meet other state requirements, Florida must support the following business objectives:

- Provide a state-level repository to support the FBI's NIBRS data collection, the FBI's Use-of-Force data collection, Law Enforcement Information Exchange (LInX) data collection, the FBI's law enforcement employee count collection, and Florida specific data elements collected from state and local law enforcement agencies;
- Provide a mechanism for agencies that do not have a records management system (RMS) or whose RMS is not capable of submitting NIBRS data so that those agencies can provide incident data to the state;
- Ingest data from state and local law enforcement agencies per the FIBRS technical specifications that are based on the current NIEM XML standards;
- Automate the collection of law enforcement employee counts from state and local agencies for submission to the FBI;
- Perform data quality checks on received data to ensure it meets associated business rules and automate when applicable;
- Generate agency-level statistics from the received data for agency review, provide statistics equivalent to the UCR Summary for comparison purposes;
- Provide a mechanism for an agency to review the generated statistics, allowing the agency to update their data if necessary;
- Provide the ability to send automated submissions to NIBRS, Use-of-Force, and LInX;
- Provide the ability to generate canned and ad hoc statistics and reports;
- Manage agency information and points of contact for data review and data approval through a secure user interface;
- Support data transmissions through secure channels;
- Meet current FBI, FDLE, and state security requirements and support updates to security requirements;
- Provide a solution to meet capacity requirements, growth for future needs, and disaster recovery needs;
- Comply with current and subsequent updates to state and national retention requirements;
- Provide up to date training on solution functionalities;

- Provide the ability to audit all transactions and generate reports;
- Automate data quality checks;
- Support the certification process for national submissions; and
- Manage federal pass-through funds to agencies for implementing the technical requirements.

In addition to the objectives that are geared towards the submission of incident-based data to the FBI, Florida intends to support the following business objectives:

- Eliminate or improve manual and/or obsolete processes in the collection of data, formatting/reformatting of data, generation of statistics and reports, maintenance of agency information and points of contact, data review, and data approval;
- Consolidate and streamline data submission from state and local agencies to state, regional, and federal data repositories so that agencies are not responsible for multiple, disparate data submission processes;
- Eliminate standalone stovepipe data collection websites currently maintained by FDLE for collection of hate crime, human trafficking, and cargo theft data; and
- Provide an integrated mechanism for agencies to submit data to the FBI Use-of-Force repository.

B. Baseline Analysis

Purpose: To establish a basis for understanding the business processes, stakeholder groups, and current technologies that will be affected by the project and the level of business transformation that will be required for the project to be successful.

1. Current Business Process(es)

Background

The Department of Justice's (DOJ) FBI is responsible for the Uniform Crime Reporting (UCR) program. Title 28, United States Code 534 (a) and (c) (28 U.S.C. 534 (a) & (c)): Requires the FBI to collect and publish UCR data. The DOJ's Bureau of Justice Statistics (BJS) uses the data from the UCR program to generate national crime statistics. BJS is tasked with generating a representative sample of national crime data as part of the National Crime Statistics Exchange (NCS-X) program. The UCR program includes both SRS data as well as NIBRS. UCR S data has been collected since the 1930s, while NIBRS came online nationally in 1988.

Florida has participated in the UCR SRS program since 1971, collecting crime data and providing that data to the FBI UCR program. While Florida once reported incident-based data, for the last twenty years Florida has been reporting UCR summary data.

Approximately 400 state and local agencies report summary data to FDLE, with some agencies reporting data for their jurisdiction as well as other jurisdictions. The state and local law enforcement agencies submit summary data to FDLE; FDLE checks, compiles, and verifies the data, and then submits the State's summary data to the FBI UCR Program. The overall business process includes not just data submission to FDLE or the FBI, but also the management of agencies and users who submit data through the FDLE UCR SRS, data validation, and report generation. In addition, FDLE prepares state crime data and statistics for release to the public and media through their public website. The details for the current business process are described below.

User and Agency Management

UCR SRS data in Florida is reported for approximately 400 jurisdictions, and each jurisdiction has been assigned at least one unique Originating Agency Identifier (ORI) code¹. UCR SRS data is reported by ORI code. Some jurisdictions have multiple ORI codes; for example, the Florida Highway Patrol (FHP) is a single reporting agency, but has a unique ORI for each county in the state and submits data for each ORI code. Overall, UCR SRS data is reported for 627 ORI codes. This could vary slightly due to the establishment of new agencies or the addition of ORI codes within agencies.

Each agency that reports UCR data designates one or more users who have access to the FDLE UCR system. These users are assigned specific roles. The agency administrator role permits access to all of the input modules while the others are limited to their respective modules. Each user is assigned the ORI code(s) that indicate what data he/she is allowed to access. Each agency may have multiple users, and each user may have access to multiple agencies. Agencies are configured as a regular agency or a contract agency. A contract agency's data is submitted by another agency. For example, Broward County Sheriff's Office reports county data as recorded by the Sheriff's Office, but also data for some cities in the county, such as the Pembroke Park Police Department. Therefore, a Pembroke Park user would be configured as a contract agency user.

Users access FDLE's UCR system either through Florida's Criminal Justice Network (CJNET) or through the public internet. While every law enforcement agency has access to CJNET, only specific terminals and systems are connected to CJNET. Each user gains access via a username and password.

FDLE manages agencies and users as described below.

Creating and Managing Users

New users are manually added by FDLE administrators through a user management tool. Users may be assigned other roles, such as for cargo theft. Each user is also assigned at least one ORI code. FDLE also manages users, including updating user information, resetting passwords, removing user accounts, or adding or deleting ORI codes for an account.

New user accounts are created as requested by agencies in the state via the agencies' designated contacts. Agencies notify FDLE when users are terminated or when someone will no longer be performing UCR-related tasks. The timeliness of the notification is dependent upon the agency; however, occasionally FDLE receives notifications via return messages from disabled email accounts.

Managing Agencies

FDLE maintains information for each jurisdiction in the UCR Input Module. The data fields include basic agency information (ORI, agency name, address, and vendor) and contact information fields for the commanding officer, UCR contact person, and Human Trafficking contact. The contact fields include the person's name, title, email, phone number, and fax number. Agencies can update this information themselves, but normally the change is made by FDLE personnel when notified to ensure that the information is updated.

¹ An ORI code (Originating Agency Identifier) is a unique nine-character identifier assigned by the FBI to a law enforcement agency.

Updating agency population values in UCR Input Module

FDLE has used population data generated by the University of Florida (UF) Bureau of Economic and Business Research (BEBR), not U.S. Census data, to generate statistics since 1971. The population data is generated annually and includes data for each city, town, and unincorporated area. Since FDLE does not receive data from cities and towns that do not have a police force, FDLE must manually combine cities and towns with unincorporated areas as necessary to be able to generate accurate crime rates. This population data is entered manually into the UCR Input Module.

Updating information in agency contact list spreadsheet

In addition to the agency information maintained in the UCR Input Module as described above, FDLE manually maintains an agency contact list spreadsheet that includes most of the same information plus contact information for hate crimes and annual employee counts. The spreadsheet includes worksheets with contact information for specific uses, such as email addresses for agencies in each of the FDLE regions, state agencies, sheriff's offices, police chiefs, and points of contact for hate crimes.

Activities for Each Reporting Cycle

There are two reporting cycles, semi-annual and annual. The semi-annual cycle covers the first six months of the year, and the annual cycle covers the entire year. Agencies may submit updated information for the first half of the year during the second half, which is incorporated in the annual report. Because of the potential for updated data affecting the first six months, one cannot assume that the difference between the data submitted during the semi-annual period and the annual period represents crime in the second half of the year.

Unless otherwise noted, documentation in this section applies to both annual and semi-annual reports.

Setting Up New Reporting Period

At the beginning of each reporting period, FDLE manually creates and opens a new reporting period in the UCR system. FDLE creates a new version of a tracking spreadsheet that logs if and when each agency has submitted its data, what kind of agency it is, whether FDLE has sent a summary verification package(s) to the agency head, whether each agency has provided a signed verification of its data, and whether an agency is in the process of adjusting/correcting its data following an initial submission.

Once the initial setup is complete, FDLE manually emails a notification that the reporting period is open, which prompts agencies to start their entry of data.

Agency Entry of Data

UCR Summary Data

Users submit UCR summary data to FDLE either by uploading seven mandatory and two optional data files per ORI code as text files or by filling in an online form. The Agency UCR upload files contain comma separated text fields. In either case, the data indicates the ORI code for the data, the report period, and report year. A user who reports for multiple ORI codes must upload multiple sets of files or fill in multiple forms.

The UCR system, including the input web site, is written, hosted, and maintained at and by FDLE's

Information Technology Services (ITS).

Submitted UCR summary data undergoes a number of validations to ensure the consistency of numeric data, the ORI is correct, the reporting period is accurate, etc. If all validations pass, the data is ingested into the UCR summary system.

Hate Crime and Cargo Theft Data

Hate crime and cargo theft data are only reported annually (not semi-annually) to the FBI. Although FDLE submits this data to the FBI only on an annual basis, local agencies report the data to FDLE as incidents occur.

Hate crime and cargo theft data is supplied by agencies to FDLE solely through forms that must be filled out manually on a web page. While some field-level validation is performed on this data, there is no cross-field validation logic on either the hate crime or cargo theft web forms. There is not a designed input module to collect this data; instead, online forms are used which include drop-down menus for fields where the response is limited to a list of select codes. Since all data is entered in free-form fields, FDLE personnel must manually review and test for errors, and correct formatting and typographical errors.

Human Trafficking Data

Human Trafficking data is only reported annually (not semi-annually) to the FBI. Although FDLE submits this data to the FBI only on an annual basis, local agencies report the data to FDLE as incidents occur. Human Trafficking data is entered by agency users via a dedicated web-based input module. The system performs cross-validation logic that checks Human Trafficking data for internal validation errors. It works similarly to the UCR error checks. Human Trafficking data is only reported for occurrences and is incident-based rather than statistics for a specified time period as with UCR summary data.

Employee Count Data

Employee count data is only reported annually (not semi-annually) to the FBI.

The FBI requires statistics on the number of full-time employees in law enforcement in the state, designated by the number of males and females in two categories: law enforcement officers and civilian employees.

FDLE maintains a database that can generate an accurate count of sworn officers since all have to be approved by the State, and this data can provide the number of male and female officers. However, the civilian employee count includes anyone else employed by law enforcement agencies in a civilian capacity, which is not available through existing FDLE databases.

FDLE has a web-based survey form for the collection of data for both the sworn and civilian personnel at each agency. The data collection for the current cycle is launched around October 31st through an email notification to the agencies. At the completion of the survey in December, FDLE manually compiles a spreadsheet of the results which is provided to the FBI.

Data Validation and Updates

Submission tracking and verification

FDLE manually maintains a tracking spreadsheet to note when data submissions occurred, whether submissions are pending, if and when FDLE has sent a summary verification package(s) to the agency, whether each agency has provided a signed verification of its data, and whether an agency is in the process of adjusting or correcting its data following an initial submission. There are situations when an agency will

report to FDLE that it will not be submitting data for a particular reporting period, and these situations are tracked as well. The tracking spreadsheet is used to manually generate reports for managers to show the status of the current submission cycle. If an agency submits data but is unable to verify and complete the submission process for a specific submission cycle, in addition to updating the tracking spreadsheet to note this, that agency's data must be manually removed from the database.

FDLE creates a copy of the UCR Database twice daily. This process performs data cleanup such as standardizing formats and generating reports.

FDLE generates several reports that are saved in portable document format (PDF) and then manually e-mailed to the agencies following data submission for review and verification purposes. These reports can also be run at the county and statewide level and are a source that are placed on the website or run on an ad hoc basis to provide data to outside requestors.

FDLE uses statistical analytical software (SAS) to manually generate a Verification Checklist Packet for each ORI that provides the verification details for that agency's submission, as well as for re-submissions if changes are made. There are numerous detailed validations that are performed, primarily with regard to values being consistent, such as verifying that specific numeric counts add up to the supplied total. The checklist provides a comparison of the currently reported data for the previous year. Each agency receives the summarized data in the form of a "Crime in Florida Report." The checklist includes a signature block that must be signed by the agency head or designee and returned to FDLE to document that the agency approves of the final data as reported. FDLE coordinates with each agency, following up as needed to ensure data is submitted, corrections are completed when necessary, and the verification checklist form is signed. Signed verification forms are returned to FDLE via fax or email, and FDLE collects and tracks the signed forms.

FDLE manually sends out reminders to agencies that have not yet submitted or verified data.

Detail/Error Warning Report

Once a user has entered data into the system, either by manual data entry or upload of data files, the Detail/Error Warning Report is available and must be accessed by the user as part of the submission process. When users access the Detail/Error Warning Report, they receive a list of reported errors and warnings. Warnings reflect data that is atypical but not necessarily wrong. If any errors are displayed, they must be corrected or submission is not possible. When the report indicates no errors are present, users may then complete the submission of their data.

In addition to the Detail/Error Warning Report, a test environment version of the UCR Input Module is available for agencies to submit partial data (i.e., less than the full cycle) to identify any errors. This has been provided to allow agencies to correct errors during the course of a reporting period rather than having to wait until submitting for the full cycle when agencies would then have six or twelve months of errors to fix at once.

FDLE actively works with agencies by phone and email to correct any errors preventing submission or any errors revealed during verification.

Finalizing Submissions and Locking Data

Once an agency signifies that its submission is complete, their data record is locked. If the agency determines that corrections are required, or if FDLE data verification reveals an issue, the agency can request that its record be unlocked. FDLE manually unlocks the record so the agency can make necessary

corrections.

Agency Download of Data Tables

Once data has been input by agencies, an agency user may view a summary of the entered data for each data table (offense, arrest, etc.). When viewing a table in the input program, the user has the option to download the table in Microsoft Word, Microsoft Excel, or PDF format. This can be helpful if errors are present that need to be resolved, or if they would like to make a copy of their submitted data for their records.

Finalizing Data and Submitting to FBI

Closing of Reporting Period in UCR Input Module

Once data submission is complete and the data has been verified and approved, FDLE manually closes the reporting period so reports can be generated.

Federal Report Generation and Submission to the FBI

FDLE manually generates the Human Trafficking report as an XML file per the FBI National Information Exchange Model (NIEM) Information Exchange Package Documentation (IEPD) specification.

The hate crime and cargo theft data have historically been provided as Microsoft Excel spreadsheets, where the data is collected in online forms and FDLE generates a spreadsheet for each data set. At the request of the FBI, FDLE provides those as flat files per the respective FBI technical specification, and the flat files are generated from the spreadsheets.

Employee count data is compiled by FDLE into a spreadsheet which is provided to the FBI.

Currently, data files are emailed to the FBI.

Reporting Activities for Florida

Once data is available for the reporting period, FDLE prepares reports for publication on the FDLE website. It is important to release the correct information on the FDLE website in a timely manner as FDLE typically gets requests for the semi-annual and annual information releases.

In addition, FDLE prepares a Hate Crimes spreadsheet for the Florida Office of the Attorney General. Florida Statute 877.19, the Hate Crimes Reporting Act, outlines Hate Crime reporting requirements for the state, asserting that law enforcement agencies report Hate Crimes to FDLE and the Florida Attorney General's Office publishes an annual hate crime report.

Differences Between UCR and Florida Reports

FDLE collects some data elements that are not defined by the FBI's UCR Summary specification. Some are collected as required by Florida statute, others because of state Attorney General requirements or requests. These data elements are primarily for hate crimes and domestic violence.

There are some values for data elements defined in the FBI's UCR Summary specification that FDLE does not collect. For example, Florida's data lacks the same level of granularity for victim and offender ages, race by age and sex of offender, types of drugs associated with an arrest, or types of felonies associated with homicides.

Data Format

The format for the agencies' UCR Summary reporting files does not follow the UCR format defined by the FBI, but is an FDLE-specific comma-delimited text file format. The data files uploaded by agencies into the UCR input system are the same for the semi-annual cycle as for the annual cycle.

Drivers for Change

The top driver for change is that the FBI is scheduled to stop accepting UCR Summary data in the year 2021 and will only accept NIBRS data afterwards. Florida's current processes and systems cannot effectively be upgraded to meet national standards. States that only report UCR Summary data, including Florida, must make the transition to NIBRS to participate in national crime reporting statistics and analytics.

The current data collection, analysis, validation, and dissemination processes are a mixture of manual and automated activities performed by many agency staff members at all levels of government that require the use of multiple, disparate information systems. Many of the processes associated with the summary reports are obsolete by technological standards due to age and inflexible design characteristics. There are several areas where current processes do not meet the needs of the users of the systems and/or data. The FDLE staff depends greatly on manual processes. Success depends on staff in approximately 400 agencies performing interdependent tasks in a timely and correct manner. Manual processes always carry the potential of introducing human error. Due to historical design constraints, it is not possible to upgrade the current disparate systems to new requirements that would bring modern benefits in terms of both efficiency and timeliness of information to FDLE and its customers such as elected officials, government agencies, the general public, and the media.

NIBRS Benefits to State and Local Agencies

NIBRS provides a number of benefits to state and local agencies.

The June 2014 NCS-X bulletin includes a frequently asked question "How will participating in NIBRS benefit a local agency's needs?" It is answered as follows: "In today's environment of open access to data, NIBRS provides a national standard for crime reporting to which local agencies can point when interacting with elected officials, the media, and the public. The editing and validation checks built into the NIBRS reporting standard provide agencies with higher quality and more accurate incident-based data. The additional data collected through NIBRS also provides the context that agencies need to understand crime problems internally and to help explain crime problems and trends to their constituents. Finally, agencies collecting NIBRS data can track crimes based on the attributes of the crime incident, not just on the limited number of crime types captured by the standard UCR Part I offenses. For example, NIBRS will allow an agency to talk about gangs, drugs, and firearms related crimes at a level of detail not possible with summary UCR data."

In addition to a significant improvement in the details and context of the reported data, the data will also be more timely. Florida UCR Summary data is submitted twice per year, so it is somewhat out-of-date before it is compiled into crime statistics and published. NIBRS data is generally submitted monthly and is, therefore, much more current. This means that statistics can be published more frequently, providing more timely data not only to law enforcement, but to the public and elected officials as well.

NIBRS also provides a mechanism to combine data from various law enforcement agencies to study multi-

jurisdictional patterns and trends. While most law enforcement agencies have their own information systems with unique data structures and codes, NIBRS standardizes the data across different agencies so that they can be combined easily for multi-jurisdictional analyses. While a law enforcement agency with a sophisticated information system will not need NIBRS to support its internal work, if its analysts are interested in what is happening in neighboring or similar jurisdictions across the country, NIBRS data expedites the analysis.

Support for Small Local Agencies

There are agencies in Florida that do not have an RMS, or do not have one capable of submitting UCR Summary (or NIBRS) data. These agencies either do not provide data to FDLE, or have to manually type in their entire data set using the FDLE UCR Input Module. Manual data entry increases the risk of data entry errors and is time-consuming. Agencies that do not have an RMS must rely on paper forms, or electronic forms stored potentially on a local computer.

FDLE is providing support to agencies that do not have the budget and resources to buy or maintain a NIBRS-compatible RMS, which could include providing access to a basic RMS system that is capable of submitting NIBRS data. This would not only increase the statistical or incident data available to the State, but would also streamline incident management at the local level.

National Crime Statistics Exchange (NCS-X) Program

The NCS-X program, led by BJS and the FBI, is an effort to expand NIBRS into a nationally representative system of incident-based crime. The goal of NCS-X is to enroll a sample of 400 scientifically selected law enforcement agencies to submit data to NIBRS. When these 400 new NIBRS-reporting agencies are combined with the more than 6,800 agencies that already reported to NIBRS as of 2013, the nation will have a nationally representative system of incident-based crime statistics drawn from the operational data systems of local and state law enforcement agencies. This incident-based data draws upon the attributes and circumstances of criminal incidents and allow for more detailed and transparent descriptions of crime in communities. Thirty-one of those 400 sample agencies are in Florida. NCS-X provides funding to states and sample agencies to offset at least some portion of the costs of transitioning to NIBRS.

Consolidate and Simplify Data Submission for State and Local Agencies

Florida's state and local agencies currently submit separate data sets for UCR Summary, hate crime, domestic violence, human trafficking, and cargo theft data based on Florida requirements.² In addition, the FBI has recently established a separate process for collecting Use-of-Force data from law enforcement agencies. Many agencies also submit data to the Florida Data Sharing Project (FDSP) repositories, and the FDSP data set has significant overlap with these other data sets. Each of these data streams has its own data formats and processes for submitting data, and these disparate requirements add to the burden placed upon the staff at these agencies.

While NIBRS includes human trafficking, cargo theft, hate crime, and domestic violence data, Florida collects additional data on hate crimes and domestic violence beyond what is in NIBRS. NIBRS does not include a significant portion of the necessary Use-of-Force data. Rather than requiring separate data streams to support NIBRS and non-NIBRS data requirements, Florida is using this opportunity to potentially consolidate data submission to simplify the process and reduce the burden on state and local agencies.

² Florida Statute 943.05 outlines program requirements for crime reporting.

Current Metrics

Note that performance metrics are not applicable for the current business process given that:

- the current system takes input submissions only twice per year,
- the first submission covers a six-month period; the second submission covers a twelve-month period,
- each submission contains 7-9 files, and
- each file consists of a limited set of numerical statistics.

2. Assumptions and Constraints

Assumptions

- The collection of statistical data is mission critical to FDLE which analyzes criminal justice data and prepares statistical reports for policy makers, planners, and program developers, in addition to supporting local law enforcement agencies in crime analysis and grant eligibility.
- Detailed requirements need to be documented before moving forward with the project.
- Requirements and requests for data collection from the federal government, as well as requirements from the Florida legislature and/or Attorney General will evolve over time.
- The system will comply with state of Florida and FBI Criminal Justice Information Services (CJIS) Security Policies.
- To the extent possible, the system will leverage data submitted by other FDLE Criminal Justice Analytics data sources.

Constraints

- Data submissions to the FBI must conform to the FBI NIBRS technical specification and must be certified by the NIBRS program.
- Florida must continue to collect hate crime and domestic violence data beyond what is required for NIBRS.
- Use-of-Force data submissions to the FBI must conform to the FBI Use-of-Force technical specification.
- Submissions to FDLE will include standard data element names, standard business rules, and standard format of data collection.

C. Proposed Business Process Requirements

Purpose: To establish a basis for understanding what business process requirements the proposed solution must meet in order to select an appropriate solution for the project.

1. Proposed Business Process Requirements

- 1) Establish a Florida Incident-Based Reporting System (FIBRS) data repository for incident-based data from state and local agencies

- 2) Collect all NIBRS data elements on a monthly basis (or more frequently) from state and local agencies for all NIBRS-reportable incidents and arrests
- 3) Continue to collect all Florida-specific data elements (i.e., not included in NIBRS) for hate crime and domestic violence on a monthly basis (or more frequently) from state and local agencies
- 4) Collect Use-of-Force data on a monthly basis (or more frequently) from participating state and local agencies
- 5) Collect FDSP data from participating state and local agencies that elect to submit their FDSP data through FIBRS
- 6) Collect employee count data from state and local agencies annually, designating law enforcement or civilian employees along with their sex
- 7) Ensure that statistical incident data (e.g., NIBRS, hate crime) is cleanly separated from more sensitive investigative data
- 8) Minimize the number of separate and unique data submission processes and data sets that state and local agencies must support
- 9) Eliminate current manual processes for collecting, reviewing, tracking, and updating data submissions
- 10) Maintain information on state and local agencies, including one or more designated reporting coordinators for each agency, and their contact information
- 11) Maintain information for one or more designated data approvers for each agency, and their contact information
- 12) Provide training and support for each agency
- 13) Provide a user management capability to allow the addition, deletion, and modification of FIBRS users, including FDLE and state/local agency users, to include the ability to manage user authorization and privilege management so that each user only has access to the data he/she are authorized to view, update, or approve
- 14) Support state and local agencies to generate data for submission to the state repository to ensure the data is accurate, complete, timely, and of high quality
- 15) Provide a mechanism for agencies that do not have an RMS, or whose RMS is not capable of reporting NIBRS data, so that those agencies can provide incident data to the state
- 16) Perform data quality checks on received data to ensure it meets NIBRS and Use-of-Force business rules plus state-defined business rules
- 17) Provide a mechanism to alert an agency of any data quality problems in the received data, along with a way for the agency to update its data
- 18) Generate agency-level data and statistics from the received data for agency review, and for an appropriate period of time also provide statistics equivalent to the UCR Summary for comparison purposes
- 19) Provide a mechanism for an agency to review and download the generated statistics, and to update its data if the review indicates any issues with the data provided by the agency
- 20) Provide a mechanism for an agency to indicate to FDLE their data is not to be included in the state's NIBRS submission, which may occur for reasons such as concerns with the statistics resulting from the agency's data, data quality issues, RMS issues, etc.
- 21) Provide a mechanism for an agency to explicitly approve the submitted data based on their review of the data and the corresponding generated statistics
- 22) Provide an automated mechanism to track data submissions and approvals to show the status of the current submission cycle, including agencies who have submitted data, are revising data, or that will not be able to submit data, that have indicated that the data is not to be included in the state's NIBRS submission, and that have formally approved their data

- 23) Provide automated reminders to agencies that have not submitted data, and to agencies that have not provided one of the mandatory formal approvals of data
- 24) Accept UCR Summary data submissions from state and local agencies until FDLE determines that a sufficient number of agencies are submitting data to FIBRS
- 25) Manage agency population data for use in developing statistics
- 26) Generate NIBRS data for monthly submission to the FBI for the entire state
- 27) Submit data to FDSP for those agencies that have elected to contribute their FDSP data through FIBRS
- 28) Submit Use-of-Force data to the FBI for those agencies that want their data submitted
- 29) Submit employee count information to the FBI annually
- 30) Generate state crime data and statistics for publication and distribution
- 31) Publish state crime data and statistics for dissemination to the public, media, and government stakeholders

2. Business Solution Alternatives

In 2016, FDLE received funding from the NCS-X program to develop an implementation plan for transitioning from UCR Summary to NIBRS. As part of that project, FDLE developed an online readiness assessment survey to collect information from Florida state and local agencies. In addition, FDLE participated in a number of on-site readiness assessments conducted directly by the NCS-X program.

These assessments provided a statewide snapshot with the following data points:

- Incident data collection processes and systems currently in place across the state.
- NIBRS data elements currently being collected at each agency.
- Vendor and agency-developed RMS products in use, as well as short-term plans for upgrading or replacing products.
- Readiness of deployed vendor and agency-developed RMS products for NIBRS data collection, quality checks, and submission to the state.
- Number of officers and staff potentially impacted by the NIBRS transition.

The project was also intended to conduct the following tasks:

- Document AS-IS and TO-BE high-level business processes and technical functionality for Florida's statistical reporting at the state level.
- Determine the use of RMS products and the changes and costs required to implement and deploy a statewide incident reporting system that can support NIBRS.
- Determine data elements that state and local agencies are required to submit to the state beyond what is defined by NIBRS.
- Research data that is submitted to other state and federal programs, and evaluate the potential for simplifying the current disparate data submission processes state and local agencies must support.
- Develop cost and schedule estimates for a new Florida system that supports NIBRS at a minimum.
- Develop and research alternative approaches for implementing a new statewide NIBRS reporting system that also supports Florida-specific data elements, and the potential for consolidating the current disparate data submissions to other programs.

Four approaches were evaluated as follows:

Approach 1 – Develop a basic NIBRS capability based on the existing NIBRS technical specification.

Approach 2 – Leverage the existing Florida Data Sharing Project (FDSP) systems in the state.

Approach 3 – Develop a system based on the existing FBI National Data Exchange (N-DEx) data submission specification.

Approach 4 – Develop a hybrid system that accounts for the strengths and weaknesses of FDSP and N-DEx.

3. Rationale for Selection

FDLE applied several criteria to compare alternatives and recommend a business solution that best meets the business and strategic needs of the agency, as well as state and local agency stakeholders.

These criteria include:

- Initial and future workload for state and local agencies
- Support for multiple data sets used by the state and/or the FBI
- Ability to automate or streamline data collection processes
- Ability to disseminate crime data and statistics to public, media, and government stakeholders
- Impact to vendor and agency RMS systems
- Impact to FDLE IT services and systems
- Costs

4. Recommended Business Solution

After evaluation of several approaches, the recommended business solution is to replace the current UCR Summary system with a new hybrid solution, based on Approach 4, above. This system will meet Florida's needs for collecting NIBRS, FDSP, Use-of-Force, and the Florida-specific data elements required for hate crime and domestic violence reporting, while also supporting FDLE's need for a state-owned crime data and analysis repository. The new FIBRS system will be based on Commercial Off-The-Shelf (COTS) products that are customizable to meet current and future business needs and integrate with the existing FDSP system.

FIBRS will be able to process and store all required high level data constructs and all detailed data contents to meet both current needs and anticipated future upgrades. This approach will define business rules to ensure the data is consistent and of high quality, so that crime data can be used for both statistical and investigative purposes.

To realize the business solution, FDLE plans to acquire commercially available systems that can be customized to meet FDLE's business requirements.

The contracted systems will include, but are not limited to:

- Commercial NIBRS repository
- Commercial RMS product
- Integration with the existing FDSP system
- Contracted services to upgrade local agencies' RMS products
- Project management services
- Software customization services
- Data analysis and migration services
- System integration and testing services
- Implementation and configuration

- Training services

D. Functional and Technical Requirements

Purpose: To identify the function and technical system requirements that must be met by the project.

This section documents the high-level functional and technical requirements of the system.

Data Collection and Storage

- The FIBRS repository will be hosted in FDLE's Microsoft Azure government tenant.
- The FIBRS repository will be capable of supporting data elements and their cardinality as defined by the FDLE Extensible Markup Language (XML) data specifications. The technical specification includes markings so that an agency can indicate that the data for a specific incident may be included in NIBRS submissions, Use-of-Force (UoF) submissions, forwarded to the FDSP, or any combination. For example, an agency may indicate that an incident is to be included in NIBRS submissions but not forwarded to the FDSP.
- The FIBRS repository will be capable of supporting employee count data elements
 - The FIBRS repository will provide a mechanism for agencies to submit their annual employee count information.
 - The FIBRS repository will accept agency data submissions that conform to the CJAdmin XML data specification.
- The FIBRS repository will retain the original data submission as provided based on the XML data specifications.
- FIBRS will provide a mechanism for an agency to indicate it has no reportable incidents for a particular month.
- Agencies will submit data to FIBRS through a secure web service.
- The FIBRS repository will leverage communal information for each agency and contact information for appropriate personnel designated by the agency. The FIBRS repository will support the import and grouping of population data from University of Florida (UF) Bureau of Economic and Business Research (BEBR). FDLE will acquire an RMS for use by agencies that do not have an RMS, whose RMS is not capable of reporting NIBRS data, or who desire to transition to a state-supported solution. FDLE worked with interested agencies to define requirements for the RMS, evaluate RMS products, and to collect feedback on the recommended product. The RMS will have the capability to submit data to the FDSP.
- The state-provided RMS will be accessible from an officer's desktop computer, laptop, or Mobile Data Terminal. Regardless of where the officer is and whether he/she has network access, the officer must be able to access all functions of the software and all code lists in order to be able to enter complete incident data. However, if the officer is at a location without network access, the software must temporarily store the data and be capable of uploading the data to the RMS when network access becomes available.
- FDLE will provide technical assistance to RMS vendors and developers to provide training on the FIBRS technical specification and functional and technical requirements, as well as to provide implementation and testing support, to ensure that all implementers understand the requirements and are able to develop products that will interoperate with FIBRS.
- FDLE will provide financial support for agencies to upgrade their RMS systems in order to ensure that as many agencies as possible are able to participate, providing the jurisdictional and population coverage necessary for representative crime statistics for the state and the nation.
- Agencies will submit their data at least monthly; however, the FIBRS repository will support accepting data on a more frequent basis. The FIBRS repository will perform automated checks on submitted data to ensure it adheres to all business rules.

- The FIBRS repository will provide a mechanism for FDLE personnel to view submitted data.
- Agencies will be able to update their data to correct errors or to incorporate more recent information.
- The FIBRS repository will calculate UCR Summary statistics from agency data submissions and provide to each agency so staff can compare with earlier statistics. An agency that submits FIBRS data will not be required to also submit UCR Summary data.
- FDLE will continue to accept UCR Summary data from agencies that have not transitioned to the use of the FIBRS technical specification until FDLE determines that a sufficient number of agencies are submitting data to FIBRS. UCR Summary submissions will continue through the existing UCR Input Module.
- With the heightened awareness of the lack of nationwide statistical data on the Use-of-Force by law enforcement, FDLE expanded the UoF data collection options to include a user interface. This allows agencies, who are unable to submit the data using the XML data specifications, an opportunity to participate in this program.

Administration and Management

- An agency can designate one or more persons to be an agency contact, and one or more persons to be an agency approver. An agency's contact and approver may be the same person(s).
- Agencies will be provided training on their roles and on any software tools available to them to support their tasks. New agencies must receive training prior to being granted access to FIBRS. Existing agencies will receive periodic refresher training, with the frequency of refresher training to be determined by FDLE.
- The FIBRS repository will provide a web-based interface to agency and FDLE users. Access requirements will follow FDLE security policy.
- Only agency users with certain privileges will be able to update information in FIBRS, review agency-level data or generated statistics, or review error and warning reports for their data.
- The FIBRS repository will support an FDLE administrator role.
- Only agency users with certain privileges will be able to review data and generated statistics, review error and warning reports for their data, or update information for their designated agency.
- Only agency users with certain privileges will be able to provide formal approvals for data from their designated agency.
- The FIBRS repository will provide an interactive mechanism for agency users to formally approve data.
- The FIBRS repository will provide an interactive mechanism for agencies to indicate for a particular reporting period that they are planning to update their data, or will not be able to submit their data, or that their data should not be used for the generation of Florida statistics or supplied to the FBI.
- The FIBRS repository will automatically notify the agency when mandatory agency approvals of data are required. FIBRS will automatically notify designated FDLE personnel if an agency does not approve their data in a timely fashion.
- The FIBRS repository will automatically track and update the status information for each agency, which will be available to designated FDLE personnel.
- The FIBRS repository must be sufficiently flexible to accommodate FBI and State updates to NIBRS, Use-of-Force, and employee count specifications and/or published templates.
- Data must be explicitly marked in FIBRS to logically and/or physically separate statistical data from the more sensitive investigative data to ensure that the only users who can access sensitive data are those who have the explicit authorization to do so. Different user roles will determine the type of data accessible; user roles will have different attributes for those working with investigative versus statistical data.

- The FIBRS repository will automatically notify the submitting agency when errors are found in their data. The information contained in the notification must be specific enough for a submitting agency to be able to identify and correct the error. By default, data approved in FIBRS will be included in the state’s NIBRS submission. However, FDLE or an agency can use the FIBRS user interface to indicate to FDLE that their data is not to be included in the state’s NIBRS submission, which may occur for various reasons such as concerns with the statistics resulting from the data, data quality issues, RMS issues, etc. FIBRS will update the status of the agency’s data submission process and will alert the appropriate FDLE personnel. When the agency is ready, they can use the FIBRS user interface to indicate that their data may be submitted to NIBRS.

Report Generation and Data Submission to Other Organizations and Systems

- The FIBRS repository will generate and submit approved NIBRS data for state and local agencies to the FBI NIBRS repository monthly, adhering to the published FBI NIBRS XML specification.
- The FIBRS repository will forward FDSP data to the FDSP repository daily.
- The FIBRS repository will generate and submit Use-of-Force data to the FBI on a monthly basis, or more often if desired by an agency, adhering to the published FBI Use-of-Force specification.
- The FIBRS repository will generate and submit employee count data to the FBI annually, in the format documented by the FBI.
- The FIBRS repository will automatically generate state crime data and statistics for publication and distribution where possible, and provide interactive access and/or download of data where necessary. FDLE will publish the data and/or provide access to it for the public, media and government stakeholders.
- The FIBRS repository will be capable of generating ad hoc reports in response to requests from agencies or public record requests or state policymakers.

III. Success Criteria

Purpose: To identify the critical results, both outputs and outcomes, that must be realized for the project to be considered a success.

SUCCESS CRITERIA TABLE				
#	Description of Criteria	How will the Criteria be measured/assessed?	Who benefits?	Realization Date (MM/YY)
1	More detailed and accurate crime data (Incident-based) available in FIBRS from state and local agencies	Agencies submit data using FIBRS technical specification instead of UCR Summary	FDLE Local agencies State policymakers	01/21 (initial agencies) 07/23 (remainder)
2	More detailed and accurate crime data available – data validation performed on submitted data with reports on errors/discrepancies reported to agency	Agencies submit data to FIBRS repository will perform automated data validation and report results to agency, which can update data in FIBRS	FDLE Local agencies State policymakers NIBRS FBI	01/21 (initial agencies) 07/23 (remainder)

SCHEDULE IV-B FOR FLORIDA INCIDENT-BASED REPORTING SYSTEM (FIBRS) IMPLEMENTATION

SUCCESS CRITERIA TABLE				
#	Description of Criteria	How will the Criteria be measured/assessed?	Who benefits?	Realization Date (MM/YY)
3	More complete crime data available – additional agencies using Records Management Systems	State-supported RMS available to agencies without an RMS or whose RMS cannot submit incident-based data	FDLE Local agencies NIBRS State policymakers	07/21 (initial agencies) 07/23 (remainder)
4	More timely crime data available	Agencies submit data daily or monthly instead of every six months	FDLE Local agencies	01/21 (initial agencies) 07/23 (remainder)
5	Incident-based data from Florida available for generation of nationwide crime reporting through FBI NIBRS	Data from FIBRS submitted to FBI NIBRS	FDLE Local agencies NIBRS	01/21 (initial agencies) 07/23 (remainder)
6	Incident-based data from Florida available for use by FBI Use-of-Force	Data from FIBRS submitted to FBI Use-of-Force repository	FDLE Local agencies FBI	9/20 (initial agencies) 07/23 (remainder)
7	Law enforcement data available in FDSP repository	Data from FIBRS submitted to FDSP repository	Local agencies FDSP	01/21 (initial agencies) 07/23 (remainder)
8	Reduction in number of different and overlapping data submissions processes supported by agencies and FDLE	Agencies submit data using FIBRS technical specification instead of separate UCR Summary, FDSP, cargo theft, hate crime, and domestic violence interfaces	FDLE Local agencies	01/21 (initial agencies) 07/23 (remainder)
9	Incident-based crime reports available in Florida	Florida crime reports generated using FIBRS data	FDLE Local and state agencies/officials State policymakers Public	01/21 (initial agencies) 07/23 (remainder)
10	Automate existing manual processes	Data verification information generated by FIBRS and available online to agency users	FDLE Local agencies	01/21 (initial agencies) 07/23 (remainder)

SCHEDULE IV-B FOR FLORIDA INCIDENT-BASED REPORTING SYSTEM (FIBRS) IMPLEMENTATION

SUCCESS CRITERIA TABLE				
#	Description of Criteria	How will the Criteria be measured/assessed?	Who benefits?	Realization Date (MM/YY)
11	Eliminate multiple, overlapping data submissions	State and local agencies submit a single data set to FIBRS rather than using multiple overlapping data submission processes	FDLE Local agencies	01/21 (initial agencies) 07/23 (remainder)
12	Leverage new technology	Use of standards such as NIEM, NIBRS, Use-of-Force, web services	FDLE Local agencies	09/20 (UoF) 01/21
13	Decommission legacy systems	UCR Input Module, and web input forms for Hate Crime, Cargo Theft, and Domestic Violence taken out of service	FDLE	TBD

IV. Schedule IV-B Benefits Realization and Cost Benefit Analysis

A. Benefits Realization Table

Purpose: To calculate and declare the tangible benefits compared to the total investment of resources needed to support the proposed IT project.

For each tangible benefit, identify the recipient of the benefit, how and when it is realized, how the realization will be measured, and how the benefit will be measured to include estimates of tangible benefit amounts.

BENEFITS REALIZATION TABLE					
#	Description of Benefit	Who Receives benefit	How is the benefit realized?	How will the realization of the benefit be measured	Realization Date (MM/YY)
1	More detailed and accurate crime data	<ul style="list-style-type: none"> • Criminal Justice Agencies • State and local policymakers • State and local governments • FDLE • Public • FBI 	<ul style="list-style-type: none"> • Florida UCR data does not currently meet all FBI UCR specifications due to a lack of data granularity. The new FIBRS system will collect compliant data. • Florida's current UCR system collects aggregate crime data; specific descriptive data about victim, offender, location, weapon, time-of-day, drug/alcohol involvement is not collected. The new FIBRS system will collect this information providing analytical value to influence policy. • Incident geolocation data, not currently collected, will allow for the creation and utilization of statewide crime-mapping. • Currently, agencies are presented with their aggregate crime data statistics twice annually. The new FIBRS system will provide immediate feedback for data error/validity correction and comparison as well as providing for continuous corrections/updates to previously submitted data. 	<ul style="list-style-type: none"> • More detailed and accurate crime data will be measured by the implementation of new methods for receiving, validating, updating, correcting, storing, and displaying data in the new FIBRS system. 	06/22
2	More complete crime data available (due to more agencies using Records Management System)	<ul style="list-style-type: none"> • Criminal Justice Agencies • State and local policymakers • State and local governments • FDLE • Public • FBI 	<ul style="list-style-type: none"> • Agencies currently not able to participate in Florida's UCR program because of an outdated/obsolete system will be able to participate by using the state-provided RMS system and thereby eliminate the need to manually count, record, and submit their UCR data. This will both increase the completeness and accuracy of the UCR data and increase the number of agencies participating. • Agencies that use the state-provided RMS will be able to participate in Florida's UCR program. 	<ul style="list-style-type: none"> • FDLE will measure the number of local criminal justice agencies utilizing the state-provided RMS system to collect and submit compliant UCR data. 	06/23
3	Availability of more timely crime data	<ul style="list-style-type: none"> • Criminal Justice Agencies • State and local policymakers • State and local governments 	<ul style="list-style-type: none"> • Currently, Florida's crime data is collected and provided on a twice annual basis. With the new FIBRS system, data will be collected and made available on at least a monthly basis with the ability to report more frequently. 	<ul style="list-style-type: none"> • The availability of more timely crime data will be measured by the implementation of new methods for receiving, 	06/23

SCHEDULE IV-B FOR FLORIDA INCIDENT-BASED REPORTING SYSTEM (FIBRS) IMPLEMENTATION

		<ul style="list-style-type: none"> • FDLE • Public • FBI 	<ul style="list-style-type: none"> • Agencies can provide incident data to the state program without having to wait for classification, clearance, closure, prosecution, etc. of an incident because the new FIBRS system will allow for continuous updates to previously submitted data. • Florida will be able to provide statewide UCR data to the national program on a monthly basis as required by the FBI. 	<p>validating, updating, correcting, storing, and displaying data in the new FIBRS system on at least a monthly basis.</p> <ul style="list-style-type: none"> • The availability of more timely crime data will be measured by FDLE's ability to provide the FBI with monthly UCR data. 	
4	Reduction in the number of different and overlapping data submission processes supported by agencies and FDLE	<ul style="list-style-type: none"> • FDLE • Criminal Justice Agencies • FBI 	<ul style="list-style-type: none"> • Criminal justice agencies are required to provide four separate data submissions, twice annually, as part of the UCR submission requirements. The current submission process requires these data submissions to be entered in separate places. • A new FIBRS system will be able to provide all the functionality in one cohesive system, which will reduce the time spent synchronizing data and maintaining separate systems. • Currently, FDLE manually generates separate files for submitting statewide UCR data to the national program at the FBI. A new FIBRS system will generate file(s) that conform to the national program standards. 	<ul style="list-style-type: none"> • The reduction of the number of different and overlapping data submissions will be measured by the ability of the new FIBRS system to provide the functionality in one cohesive system. • The FBI will be able to ingest Florida's statewide crime data file(s) without modification. 	6/23
5	Automate existing manual processes	<ul style="list-style-type: none"> • FDLE • Criminal Justice Agencies • FBI 	<ul style="list-style-type: none"> • Currently, Florida's UCR program requires the manual management of several processes: setting the system to the current year and reporting period, combine population values for overlapping jurisdictions, setting every agency (ORI) to the correct population, create/manage user accounts for system access, unlock agencies in system when need to resubmit/edit data, send notifications to agencies about submission cycles, generate and distribute agency verification packets, log and track submissions and verification progress, and direct contact delinquent agencies regarding submissions/verifications. • Currently, agencies receive verification packets to review and verify their submitted data. Generating and distributing these packets is a manually triggered and monitored process. The new FIBRS system will automatically generate and display these immediately upon data submission. 	<ul style="list-style-type: none"> • The reduction of time for manual management of processes will be measured by the added functionality to the FIBRS system. 	1/21

6	More detailed and accurate use-of-force data	<ul style="list-style-type: none"> • Criminal Justice Agencies • State and local policymakers • State and local governments • FDLE • Public • FBI 	<ul style="list-style-type: none"> • Currently, a small number of law enforcement agencies participate in the FBI's LEAP application to submit use-of-force data. Duplication and data quality issues exist with this method of use-of-force submissions. • A new FIBRS system will be able to provide all the use-of-force functionality in one cohesive system, which will reduce the data quality issues. It will provide a user interface for data entry as well as a method for file submissions from an agency's RMS. 	<ul style="list-style-type: none"> • The availability of more timely use-of-force data will be measured by the implementation of new methods for receiving, validating, updating, correcting, storing, and displaying data in the new FIBRS system. • The availability of more timely crime data will be measured by FDLE's ability to provide the FBI with the use-of-force data. 	1/21
---	--	---	---	--	------

B. Cost Benefit Analysis (CBA)

Purpose: To provide a comprehensive financial prospectus specifying the project's tangible benefits, funding requirements, and proposed source(s) of funding.

The focus on this project is to implement the agency's strategy to comply with the Federal Bureau of Investigation's (FBI) deadline to convert Uniform Crime Reporting (UCR) from summary data to incident-based data from Florida's local and state law enforcement agencies by standing-up the state program and assisting Florida law enforcement agencies to transition to incident-based crime reporting.

NIBRS also provides a mechanism to combine data from various law enforcement agencies to study multi-jurisdictional patterns and trends. While most law enforcement agencies have their own information systems with their data structures and codes, NIBRS standardizes the data across different agencies so that they can be combined easily for multi-jurisdictional analyses. While a law enforcement agency with a sophisticated information system will not need NIBRS to support its internal work, if its analysts are interested in what is happening in neighboring or similar jurisdictions across the country, NIBRS data will expedite the analysis.

The planned improvements and efficiencies in the work processes will enable FDLE to add additional data sharing services and maintain sufficient productivity in the face of growing demands.

Cost Benefit Analyst spreadsheets are in appendix H.

V. Schedule IV-B Major Project Risk Assessment

Purpose: To provide an initial high-level assessment of overall risk incurred by the project to enable appropriate risk mitigation and oversight and to improve the likelihood of project success. The risk assessment summary identifies the overall level of risk associated with the project and provides an assessment of the project's

alignment with business objectives.

A. Risk Assessment Tool

Project	Florida Incident-Based Reporting System

The complete risk assessment worksheets are in Appendix I.

VI. Schedule IV-B Technology Planning

Purpose: To ensure there is close alignment with the business and functional requirements and the selected technology.

A. Current Information Technology Environment

1. Current System

a. Description of Current System

The current UCR Summary system is comprised of a number of automated, semi-automated, and manual processes and systems developed over twenty years. Requirements for UCR Summary data have evolved over time, and new data collection requirements have been added, such as for human trafficking. At this time, the following data is collected from state and local agencies through the mechanisms indicated:

- UCR Summary data either through manual entry on a dedicated web-based input form, or by uploading multiple text data files to the UCR Input Module,
- Hate crime data through manual entry on a Kentico survey form available on a web page,
- Cargo theft data through manual entry on a Kentico survey form available on a web page,
- Human trafficking data through manual entry on a dedicated web-based input form, and
- Employee count data through manual entry on a web-based survey form.

The current system performs some automated validation of the supplied data, while other validation is performed manually by FDLE personnel.

The current system also includes artifacts that are managed manually by FDLE personnel rather than through an automated system or process, and these artifacts include:

- Agency Contact List spreadsheet
- Data Submission Tracking spreadsheet

Local agencies collect summary, hate crime, cargo theft, and human trafficking data primarily through officers dispatched to calls for service. In most cases, an officer enters data into the Mobile Data Terminal (MDT) which then transfers the data to the agency’s automated RMS, although some agencies still use paper forms or have officers take notes that are then called in to data entry personnel for transcription into an RMS.

User and User Types

The current FDLE system includes the following user types and user numbers.

User Type for State System	# of users
Agency Data Entry Users	694
FDLE Administrators	16
Total	710

Number of Transactions

UCR Summary data is currently received from approximately 400 state and local agencies. Some agencies report data for their jurisdiction as well as other jurisdictions; over 400 jurisdictions are represented.

The number of internal transactions, such as for FDLE personnel to add or update an agency user, are not tracked. It should also be noted that under the current reporting requirements, data submission transactions are very limited given that:

- Agencies submit UCR Summary data to FDLE twice per year
- The first submission covers a six-month period; the second submission covers a twelve-month period
- Each summary submission contains 7-9 files consisting of a limited set of numerical statistics
- FDLE submits summary data to the FBI twice per year
- Agency submissions to FDLE for hate crime, cargo theft, and human trafficking contain limited data and totaled only 265 for an entire year
- FDLE submits hate crime, cargo theft, and human trafficking data to the FBI once per year
- Agency personnel counts are submitted to FDLE and compiled for submission to the FBI once per year
- Use-of-Force by law enforcement is not captured

However, some transaction information is available or can be estimated as noted below based on the 2018 Crime in Florida Reports.

- Total number of UCR Summary crimes reported by state and local agencies: 567,166
- Highest number of UCR Summary crimes reported by a county: 100,541
- Lowest number of UCR Summary crimes reported by a county: 56
- Number of hate crimes reported: 168
- Number of cargo thefts reported: 90
- Number of human trafficking incidents reported: 141
- Employee data is supplied once per year per agency

Requirements for Public Access, Security, Privacy, and Confidentiality

The UCR systems are not open to the public. Reports generated from the data are available to the public via FDLE's Florida Statistical Analysis Center's public web site. Currently, reports are generated twice a year with additional ad-hoc reports generated as needed.

Hardware Characteristics

The overall FDLE system consists of two (2) production servers, two (2) test servers, and two (2) development servers. The network interface for users accessing is via CJNET, and includes a network load balancer. Most storage is internal to the servers, although the development server uses the FDLE Storage Area Network (SAN).

The hardware used by state and local agencies that submit data to FDLE varies by jurisdiction.

Software Characteristics

The overall FDLE system uses a number of different software and data based components that have been developed over the years. The system uses a SQL Server database housing the in-process data that has been submitted by state and local agencies as well as a separate database that houses data once it has been validated and edited for consistency. Data is copied to a Microsoft Access database where data is

generated for submission to the FBI. Data is also copied to a set of SAS data sets which are used for quality analysis, generating reports for publication, and making the data available to other users/public. Some data transformation has to occur outside of the current system to accommodate legacy issues for historical data.

Agency users upload some data through dedicated web forms, while Summary data is submitted either by an agency user typing the information into a form in the UCR Input Module or by uploading a set of files. Some data validation is performed as part of a regular batch process. Some components use Microsoft Windows while others use Linux. Internally developed software generally uses the Java programming language, although a number of utilities have been developed over the years using SAS software. Some SAS programs are run automatically, while others are initiated manually.

The characteristics for software used by state and local agencies that submit data to FDLE vary by agency.

Existing System and Process Documentation

The current processes and software products and tools in use at FDLE have evolved over the years. Documentation for the total system as a whole does not exist, although some individual processes and software products have been documented.

System and process documentation available at state and local agencies that submit data to FDLE are unknown.

User Interfaces

The current systems include a number of user interfaces for FDLE and/or agency personnel to access various components of the current system as described below.

- FDLE personnel use the UCR user management tool to manage agency user accounts.
- FDLE personnel use the UCR Input Module to manage information for each jurisdiction.
- Agency users enter UCR Summary data into the UCR Input Module through a web-based input form.
- Agency users upload UCR Summary data into the UCR Input Module.
- Agency users enter hate crime, cargo theft, and employee count data through survey forms on a web page.
- Agency users enter human trafficking data through web-based input forms.
- Agency users access the Detail/Error Warning Report through the UCR Input Module.
- Once an agency signifies the submission is complete, the Input Module locks the data record.
- FDLE personnel use the UCR Input Module to unlock an agency's data record so the agency can manually enter or upload corrected data.
- FDLE personnel use SAS programs to extract the data.
- FDLE personnel use macro-enabled Microsoft Excel templates to present the data as reports in PDF format.
- FDLE personnel use the Microsoft Access database to populate data for internal status reports, including which agencies have submitted, are pending, have verified, etc., and the respective percentage of the population falling into each category.
- FDLE personnel manually enter population data into the UCR Input Module.
- State and local agency officers generally enter incident data via MDT into their agency's RMS.
- State and local agency supervisors, data transcribers, and records personnel generally access incident data through the user interface provided by their RMS.

System Interfaces

The current systems include a number of internal and external interfaces as described below:

- Agency users interface to the current systems either through Florida's CJNET or through the public Internet.
- SAS interfaces with the UCR Database to copy the data which is used to generate reports and perform some data cleanup on agency submissions.
- A Microsoft Access database interfaces with the UCR Database via ODBC.
- Data entered or uploaded by agency users goes into the UCR Web Database.
- Once data in the UCR Web Database has been checked and any errors corrected, data is copied to the UCR Database.

Report Generation

FDLE generates six UCR Summary data files for submission to the FBI from a Microsoft Access database that is linked via ODBC to the UCR data tables on the UCRDB database running under SQL Server.

FDLE manually generates the human trafficking report as an XML file per the FBI NIEM Information Exchange Package Documentation (IEPD) specification.

The hate crime and cargo theft data have historically been provided as Microsoft Excel spreadsheets, where the data is collected in online forms and FDLE generates a spreadsheet for each data set. At the request of the FBI, FDLE provides those as flat files per the respective FBI technical specification, and the flat files are generated from the spreadsheets.

Employee count data is compiled by FDLE into a macro-enabled Microsoft Excel template, which generates a flat file to provide to the FBI.

Currently, data files are uploaded using an FTP server at the FBI.

Once data is available for a reporting period, FDLE prepares reports for publication on the FDLE website. In addition, FDLE prepares a hate crimes spreadsheet for the Florida Office of the Attorney General.

Consistency with Agency Software Standards and Hardware Platforms

Many of the processes associated with the summary reports are obsolete by technological standards due to age and inflexible design characteristics. As the overall system has evolved over the years, additions and changes have adhered to FDLE's software standards and hardware platforms available at the time. The format of Summary data submitted to the FBI does not adhere to the current FBI specification.

Scalability to Meet Long-Term and Network Requirements

The current system is specifically geared towards UCR Summary data collection, processing, and submission. The new incident-based system and processes will be put into place, and agencies will transition over a period of time. The current systems and processes must remain in place while the state and approximately 400 Florida agencies make the transition. FDLE will collect and report both UCR Summary and NIBRS information until sufficient agencies make the transition for the state and FBI to have representative NIBRS data for Florida. The current system is not capable of scaling to support NIBRS data submissions.

b. Current System Resource Requirements

FDLE Systems

The following hardware is part of the FDLE system:

- 1 load balancer (for the CJNET interface)
- 2 production physical servers (each with 2 CPUs, 4 cores, 16GB RAM, 150GB internal storage)
- 2 test physical servers (each with 1 CPU, 4 cores, 8GB RAM, 150 GB internal storage)
- 2 development virtual servers (1 CPU, 2 cores, 1GB RAM, 50 GB on Storage Area Network)

The following software is part of the FDLE system:

- Microsoft Windows 2012
- Linux
- JBoss
- Microsoft SQL Server 2014
- Commvault Enterprise back-up
- Java programming language
- Apache Wicket framework
- SAS software
- Kentico
- Microsoft Excel
- Microsoft Access
- FDLE in-house developed authentication and authorization Application Security Module (ASM)

The FDLE UCR systems are hosted and maintained by the FDLE ITS. There are annual maintenance contracts in place on hardware and software. It is estimated that the equivalent of two full-time ITS personnel provide operations and maintenance support to the FDLE UCR systems. In addition to support staff, there are five (5) personnel that support data collection, agency assistance, report generation, data management, training, and agency liaison services as part of the overall FDLE system. These five personnel include one fulltime position assigned specifically to UCR, and four positions with duties outside of the UCR program.

State and Local Agency Systems

The hardware used by state and local agencies that submit data to FDLE varies by jurisdiction.

The software used by state and local agencies that submit data to FDLE varies by agency. Based on a survey performed by FDLE, there are at least 36 different commercial RMS systems in use in Florida, seven (7) in-house RMS products, and 11 agencies that do not have an automated RMS. Specific RMS systems used in the state are documented in the “Current Hardware and Software Inventory” section of this document.

FDLE does not currently fund the acquisition or maintenance of agency RMS software or hardware.

c. Current System Performance

The UCR system is a collection of servers, operating systems, databases, software products, and numerous interfaces that is specifically geared towards data collection, processing, and submission of UCR Summary, hate crime, cargo theft, and human trafficking data, as well as agency personnel counts. While the current system is capable of handling the current data storage, data processing, and user interfaces

requirements, extensive changes are required in order to go from the current UCR Summary requirements to NIBRS. The data to be submitted by agencies to FDLE, and by FDLE to the FBI, will change from being a very small set of numerical statistics submitted twice per year to a detailed set of incident-based data submitted monthly using labor intensive processes.

The current data collection, analysis, validation, and dissemination processes are a mixture of manual and automated activities performed by many agency staff members at all levels of government that require the use of multiple, disparate information systems. Many of the processes associated with the summary reports are obsolete by technological standards due to age and inflexible design characteristics. There are several areas where current processes do not meet end user needs. The FDLE staff depends greatly on manual processes to achieve business goals. Success depends on staff in approximately 400 agencies performing interdependent tasks in a timely and correct manner. Manual processes always carry the potential of introducing human error. Due to historical design constraints, it is not possible to upgrade the current disparate systems to new requirements that would bring modern benefits in terms of both efficiency and timeliness of information to FDLE and its customers such as elected officials, government agencies, the general public, and the media.

In addition, the FBI has a process for the submission of Use-of-Force data to the FBI. This encompasses any Use-of-Force that results in the death or serious bodily injury of a person, as well as when a law enforcement officer discharges a firearm at or in the direction of a person. Given the potential benefit of such information based on recent incidents, the accompanying publicity, and the current lack of representative data, it is anticipated that submission of such data to FDLE and then to the FBI will provide significant benefit at both the state and federal levels. However, the current systems and processes cannot support the collection of this data from Florida agencies, or the submission of data to the FBI.

2. Information Technology Standards

The current system is based upon the standards and specifications provided by FBI CJIS, there are some deviations from the standard in use in Florida.

- UCR Summary data is provided by FDLE to the FBI based on the FBI UCR Summary Reporting Technical Specification, with some Florida-specific deviations.
- Summary data files uploaded by Florida agencies are based on an FDLE-defined flat-file specification derived from the FBI Summary Reporting Technical Specification.
- Hate crime data is provided by FDLE to the FBI using the FBI Hate Crime Technical Specification.
- Cargo theft data is provided by FDLE to the FBI using the FBI Cargo Theft Specification.
- Human trafficking data is provided by FDLE to the FBI using the FBI NIEM IEPD specification.
- Employee count data is provided by FDLE to the FBI using a spreadsheet template provided by the FBI which produces a flat file per the FBI technical specification.

B. Current Hardware and/or Software Inventory

The current hardware and software systems were designed to support the UCR Summary reporting system, which only reports on a small set of data (originally designed more than a half century ago) and no longer meets new federal requirements and state needs for a significantly larger data set, collected more frequently, and analyzed and reported more thoroughly. The existing software cannot be upgraded to the new data standards being used in the law enforcement community, and the existing hardware is inadequate to handle the new data sizes and processing power required to meet current and future law enforcement practices.

The current hardware is no longer under purchase or warranty coverage. Software has primarily been developed in-house over the years and is not covered by maintenance contracts. All production hardware is supported through maintenance contracts.

The current processes, hardware, and software must remain operational while the state transitions to NIBRS reporting. This will allow FDLE to continue to generate crime reports for Florida and submit summary data to the FBI until a sufficient number of state and local agencies have transitioned for the state to have representative incident-based data available.

UCR Web Application Architecture

The UCR web application architecture is hosted at FDLE Information Technology Services (ITS) and consists of:

- Firewall protecting FDLE user access
- Firewall protecting UCR Admin/User access
- JBoss middle-ware Enterprise Application Server
- Load balancer for FDLE users
- Load balancer for UCR Admin/Users
- Internet-accessible DMZ Windows server cluster (FDLE users)
- CJNET-accessible Windows server cluster (UCR Admin/Users)
- Web server architecture, including:
 - Presentation Layer – User Interface Components
 - Service Layer – Spring Beans
 - Database Layer – DAO Components
 - Application Layer – Java SE, SQL Server 2008/2014, Authentication and Authorization Framework (ASM)
- SQL Server Database, including
 - FDLE ASM
 - UCR Transactions on UCRDBWEB SQL server
 - UCR Report on UCRDB SQL server
 - UCR data tables are housed in SQL Server 2014; the database resides in a clustered 2 node environment; the OS for the 2 nodes are Windows 2012 R2.
- Reporter – SAS Reporting Application

Network connections from the FDLE users and state and local agency users (i.e., UCR Admin/User) to the FDLE site is either through the existing Internet connection or the Florida Criminal Justice Network (CJNET).

The system hardware of the current UCR summary system consists of legacy CPUs, memory, and internal data storage devices:

- Production System: 2 physical servers – each with 2 CPUs 4 Cores, 16 GB RAM, 150 GB internal storage.
- Testing System: 2 physical servers – each with 1 CPU 4 Cores, 8GB RAM, 150 GB internal storage.
- Development System: 2 virtual servers – 1 CPU, 2 Cores, 1 GB RAM, 50 GB on SAN

The current UCR system is backed up by Commvault (enterprise back-up system).

Current User Groups and RMS Applications

State and local agency users are from approximately 400 Florida law enforcement agencies and include:

- All Police departments (including all cities, counties, schools, colleges, universities, airports, beach patrols, etc.)
- All sheriff's offices (SO)
- The Florida Fish and Wildlife Conservation (FWC) Commission
- The Florida Department of Corrections Inspector General (IG) Office
- The Florida Department of Law Enforcement (FDLE)
- The Florida Highway Patrol (FHP)
- The Florida Department of Business and Professional Regulation Division of Alcoholic Beverages and Tobacco (DABT)
- The Florida Department of Financial Services Division of Insurance Fraud

FDLE surveyed all agencies currently submitting UCR Summary data to the state to determine which agencies have an RMS, what RMS is used, what NIBRS data elements are collected, how many officers in the agency report incident data, whether the agency shares their RMS with any other agencies, the age of their hardware and software, and whether there are plans to update or replace the RMS hardware or software. Over 85% of the agencies (311) responded. Based on this data, there are at least 36 different commercial RMS products in use in Florida, seven (7) in-house RMS products, and 11 agencies that do not have an automated RMS. There are also approximately 18 RMS products, including both commercial and in-house systems, which are used by only one agency in the state. Details from that survey are shown below. Note that the numbers shown are from the survey and do not include every agency in the state.

The following commercial Records Management Systems (RMS) are being used throughout Florida as of 2016:

Commercial RMS	# of agencies
ACISS Systems RMS	9
ARMS Records Management	2
AssetWorks BOSSCOPS	1
Beacon Software Solutions RMS	3
Caliber Public Safety Global Software	1
Capers Software RMS	1
Cohero CommandPoint RMS/AFR	1
Competitive Edge Software Report Exec	1
Computer Information Systems RMS	4
Crime Star RMS	1
Delphi Enterprises Code 3	3
eForce Software RMS	3
Executive Information Services RMS	7
Florida State Univ. TRACS	2

SCHEDULE IV-B FOR FLORIDA INCIDENT-BASED REPORTING SYSTEM (FIBRS) IMPLEMENTATION

Commercial RMS	# of agencies
Hexagon Safety & Infrastructure I/LEADS	3
Informant Technologies Informant PS	1
Logisys Systems Data Trak	1
MobileTec International InMotion RMS	1
Motorola Solutions InfoTrak	1
Motorola Solutions PremierOne	3
Pamet RMS	1
Pulsiam SafetyNet RMS	1
QED Web/Partner	1
SmartCOP SmartRMS	42
Southern Software RMS	4
Spillman Flex	11
Sungard Naviline	3
Sungard ONEsolution	52
TriTech Inform RMS	3
TriTech Tiburon Total Command RMS	26
TriTech VisionRMS	2
Tritier WinGS Direct RMS	2
Tyler New World Records Management	24
USA Software CrimeFile IMS	20
Versaterm Versadex	2

In addition to the above commercial RMS applications, the following Florida agencies have developed and support their own in-house RMS, with several of these agencies also providing RMS services to sister agencies:

In-House Developed	# of agencies
Bay County SO	5
FDLE/Capitol Police	1
Florida Department of Law Enforcement	1
Jacksonville SO	2
Palm Beach County SO	1
Seminole County SO	11

In-House Developed	# of agencies
University of Central Florida PD	1

Current Agency Data Collection Practices

This section describes the process for collecting and recording incident data used by state and local agencies for crimes that occur within their jurisdiction. While details vary from agency to agency, the general process described here provides a high level, general view of the current process.

Citizen calls for service and officer dispatch are initiated through a staff of call takers, generally using a Computer Aided Dispatch (CAD) product that provides call information to an officer’s Mobile Data Terminal (MDT). Officers input additional incident data into their MDT, which in general automatically populate the agency’s RMS. RMS currently used in the state are configured for Florida’s UCR Summary data collection and submission and perform very limited, if any, data validations geared towards UCR Summary on the data entered by the officer. Incident data is generally reviewed by a supervisor to ensure it meets agency and UCR Summary business rules. Supervisors can approve the incident report or send it back to the officer for corrections; in some cases, supervisors can make limited changes to the data themselves. Once the supervisor has approved the incident report, the report goes to records department staff, who also perform business rule checks and can also send a report back for corrections, and who may also be able to make some updates to the report themselves. UCR Summary data submissions are generated semi-annually by the agency, generally through the use of UCR Summary reporting capabilities built into the agency’s RMS, and submitted to FDLE.

Some agencies do not have automated CAD systems and/or MDTs. Some agencies have a very limited automated RMS, while some rely on paper forms. These agencies generate UCR Summary data submissions manually and submit to FDLE through an online web form.

Most current vendor and some in-house developed RMS used in the state include NIBRS capabilities. In some cases, all NIBRS data elements are already included in the RMS database and displayed to the officers on their MDTs. However, NIBRS business rule data validation is not performed on input data since the state is not currently reporting NIBRS data. In other cases, the RMS database does not include all the NIBRS data elements. Therefore, these agencies would need changes to their RMS database and screens displayed to officers on their MDTs.

C. Proposed Technical Solution

The current information technology environment supporting UCR Summary reporting is significantly different from the proposed environment required to support incident-based reporting. While the processes are comparable in some cases, incident-based reporting requires daily and monthly data collection, processing, and submission versus semi-annual data collection and submission for summary reporting. Keeping the current systems and processes in place indefinitely is not an option based on the FBI’s plan to discontinue accepting summary data in January 2021.

The processing power and storage capacity required for the new FIBRS repository is much greater than the current summary system due to the larger number of data elements required for incident-based reporting, and because detailed information for each incident is reported rather than a statistical summary of the total data for six months or a year. It requires increased storage capacity plus the processing power to manage the increased data handling and analysis. However, similar to the current system, the incident-

based reporting system does not require real-time transaction processing for data collection or reporting. Although FDSP data requires much more timely data collection and data forwarding, it is still on a daily basis versus real-time. The proposed state-provided RMS system can also operate on a non-real-time basis, accounting for officers not having CJNet connectivity for limited time periods.

Hosting of FIBRS Repository

The FIBRS repository is the backbone storage and processing system and may consist of several machines hosting a database server, application server, web server, and associated network and software systems. The systems must be hosted in FDLE enterprise Microsoft Azure government tenant and must be protected from unauthorized access and environmental events.

State-provided RMS

FDLE intends to provide an RMS for agencies that do not have their own RMS, have an RMS that cannot be reasonably upgraded to support incident-based reporting, or that desire to use a state-supported RMS rather than maintain their own. The RMS must meet the requirements of the agencies that intend to use it and FDLE will develop requirements, evaluate candidate products, and make a final selection.

Hosting of State-provided RMS

The state-provided RMS will be the incident management system for Florida law enforcement agencies and will be a software as a service. The system must be hosted in Microsoft Azure government cloud and must be protected from unauthorized access and environmental events.

Develop FIBRS Repository In-House or Acquire Customized COTS FIBRS Repository

The FIBRS repository will be based on the NIBRS specification with customized functionality added to meet Florida requirements. The NIBRS specification is well documented. FDLE has drafted the additional FIBRS specification documentation that must be developed. The deployed FIBRS repository must meet the FIBRS specification as published by FDLE.

Develop State-provided RMS In-House or Acquire Customized COTS RMS

The state-provided RMS must meet the needs determined by FDLE. The RMS will be based on the NIBRS specification with customized functionality added to meet Florida's documented FIBRS requirements. The deployed RMS must meet the FIBRS specification as published by FDLE.

1. Technical Solution Alternatives

Based on the business process requirements and the recommended business solution as documented in section II.C – Proposed Business Process Requirements, a number of different aspects of the overall solution were reviewed as documented below.

Hosting of FIBRS Repository

The alternative implementations for the FIBRS repository are to host at the FDLE data center, or to use a repository hosted at a third-party site. Note that some repository vendors offer hosting, while others do not.

State-provided RMS

The alternative implementations are for the state to provide an RMS for agencies that do not have their own RMS, have an RMS that cannot be reasonably upgraded to support FIBRS incident-based reporting, or that desire to use a state-supported RMS rather than maintain their own.

Hosting of State-provided RMS

The alternatives for the state-provided RMS are to host at the FDLE data center, use a repository hosted at a vendor-site, or use an RMS that already exists at NLETS.

Develop FIBRS Repository In-House or Acquire Customized COTS FIBRS Repository

The alternatives are to develop the FIBRS repository at FDLE, or to acquire a COTS product and contract with the vendor to customize for Florida's needs.

Develop State-provided RMS In-House or Acquire Customized COTS RMS

The alternatives are to develop the state-provided RMS at FDLE, or to acquire a COTS product and contract with the vendor to customize for Florida's needs.

2. Rationale for Selection

FDLE applied several criteria to compare alternatives and recommend a solution that best meets the business and strategic needs of the agency, as well as state and local agency stakeholders. These criteria include:

- Impact to state and local agencies
- Impact to vendor and agency RMS
- Impact to FDLE IT services and systems
- Resource requirements
- Costs

3. Recommended Technical Solution

Hosting of FIBRS repository

FDLE will host the FIBRS repository in a cloud solution.

While some vendors provide hosting support, many do not, and those that do only provide it as an alternative for states that do not have the data center support necessary. The time required to ensure that a vendor-hosted repository meets state policy requirements makes a vendor-hosted solution more expensive than hosting in the Microsoft Azure government cloud. A vendor would still have to acquire hardware upon which to host the repository given that there are few vendor-hosted state incident data repositories in the country. FDLE would also have to conduct periodic audits of the vendor site to ensure ongoing adherence to state and agency policy requirements since the site is not under the control of FDLE or a trusted organization.

The repository could also be hosted at a trusted site if FDLE provided the hardware. But the installation of hardware and software at a remote site, and the management of such a remote system would make this solution more expensive and less secure than hosting in the Microsoft Azure government cloud.

State-provided RMS

The state will provide a state-supported RMS in order to ensure that incident-based data is available from a sufficient number of jurisdictions in the state to provide representative data for crime statistics.

Some of the reasons for this are below.

- There are a number of agencies that do not have an RMS and manage incident data through paper forms. Without a state-provided RMS, those agencies would not be able to participate in FIBRS.
- There are a number of agencies that maintain incident data in local computer systems that cannot

support data submission to FIBRS, or that have systems that cannot be upgraded to support any new requirements. Without a state-provided RMS, those would not be able to participate in FIBRS.

- Given the number of commercial and in-house developed RMS used by only one or two agencies, the cost of upgrading all those systems is quite high. Given the option of using a state-provided system, at least some of these agencies will switch to the state-provided RMS, saving the costs of upgrading their existing RMSs.
- For small and some medium-size agencies, the cost of maintaining the existing RMS is a strain on budgets, data centers, and support staff. By using a state-provide RMS, these agencies can liberate resources for other mission critical needs.

Hosting of State-provided RMS

The RMS will be hosted in a cloud solution.

Develop FIBRS Repository In-House or Acquire Customized COTS FIBRS Repository

FDLE acquired a vendor-customized COTS repository product for the FIBRS repository.

The market for a state-level incident-based repository consists of the 50 states; this is not a large number of COTS state-level repository products. In addition, some states have developed their own. Virtually every installed COTS repository has been customized to some degree to meet state requirements for additional data elements, business rules, code values, data export formats, etc. Therefore, all vendors are capable of, and have the expectation that any customer will require customizations to the base product. Therefore, in this realm, the customization of a COTS product is a standard approach. Vendors typically charge license, installation, and training fees for their base product plus any additional modules that are required, then charge an additional amount for customization. Ongoing maintenance fees cover the base product plus any customizations. Therefore, when the base product is updated to add features, improve usability, or to address any security issues, the vendor provides those changes to the customized products as well.

While the state-level repository is not as complex a product as an RMS, there is still a significant level of requirements analysis, design, and development. Given the number of data elements that are expected to be in the FIBRS repository, and the number of business rules that will be inherited from NIBRS and use-of-force, the repository would not be a small, simple project. Development of such a product from scratch in FDLE would be a significant undertaking requiring subject matter experts (SMEs), system engineers, business analysts, software developers, and technical writers. Developing a Florida-specific repository product from scratch would be an extremely complex and costly endeavor, and doing it while transitioning the entire state to incident-based reporting would be onerous. Therefore, development of the FIBRS repository at FDLE is not a practical alternative.

Develop State-provided RMS In-House or Acquire Customized COTS RMS

FDLE will acquire a vendor-customized COTS RMS product as the state-provided RMS.

There are dozens of COTS RMS products currently available since the market consists of every law enforcement agency in the country, if not the world. Virtually every installed product has been customized to some degree to meet state or agency requirements for additional data elements, business rules, code values, screen layout, etc. Therefore, all vendors are capable of, and have the expectation that any customer will require customizations to the base product. Therefore, in this realm, the customization of a COTS product is a standard approach. Vendors typically charge license, installation, and training fees for their base product plus any additional modules that are required, then charge an additional amount for customization. Ongoing maintenance fees cover the base product plus any customizations. Therefore, when the base product is updated to add features, improve usability, or to address any security issues, the

vendor provides those changes to the customized products as well.

Development of an RMS product entails a significant level of requirements analysis, design, and development. Complexities of a simple RMS product that can support an entire agency throughout the lifecycle of an incident from initial reporting to final disposition is a significant undertaking requiring subject matter experts (SMEs), system engineers, business analysts, software developers, and technical writers. Most existing RMS products have taken years to design, develop, and evolve into fully functional and usable products. Developing a Florida-specific RMS product from scratch would be an extremely complex and costly endeavor, and doing it while transitioning the entire state to incident-based reporting would be onerous. Therefore, development of a state-provided RMS at FDLE is not a practical alternative.

D. Proposed Solution Description

The proposed solution is to replace the current UCR Summary system with a new hybrid solution (i.e., Approach 4 as selected in Section II.C.4) that is geared toward meeting Florida's needs for NIBRS, FDSP, Use-of-Force, and the Florida-specific data elements required for hate crime and domestic violence reporting. The hybrid approach is intended to allow state and local agencies to submit a FIBRS message to FDLE, and FDLE will extract the data necessary to support data submissions to the FBI for NIBRS and the Use-of-Force, for Florida's state-wide crime statistics plus hate crime and domestic violence reporting, and to FDSP repository. FDLE could also submit data directly to the N-DEx program if desired.

To meet these requirements, FDLE intends to implement a data repository with two key components, the Florida CJIS Portal (Portal) and Florida Incident Based Reporting System (FIBRS) data to collect, store, and distribute incident based data from state and local agencies. The Criminal Justice Data Transparency project will leverage technology from the FIBRS solution to standardize and streamline the submission of data to FDLE. This will have the added benefit of economizing submissions from data contributors and reducing the need for multiple repositories. Independently implementing FIBRS will significantly increase the cost.

Data collection will consist of the following types of data from state and local agencies in Florida:

1. Collect all NIBRS data elements on a monthly-basis or more frequently, for all NIBRS-reportable incidents and arrests.
2. Collect all Florida-specific data elements (i.e. not in standard NIBRS) for hate crime and domestic violence on a monthly-basis or more frequently.
3. Collect Use-of-Force data on a monthly basis or more frequently.
4. Collect FDSP data on a daily basis.
5. Collect law enforcement agencies' employee count data annually.

The following section describes the technical aspects of the collected information.

Data Contents Overview

The hybrid solution includes approximately 250 data elements, including all NIBRS, FDSP, Florida hate crime, Florida domestic violence, and Use-of-Force data elements.

The high-level data constructs include:

- Address/location
- Event (incident, arrest, citation, booking, field contact, case record or CAD record)
- Image

- Narrative
- Offense/charge
- Pawn
- Person (including whether subject, victim, witness, etc.)
- Organization (including agency information)
- Phone number
- Vehicle
- Property (non-vehicle)
- Scars/marks/tattoos for a person
- Warrant
- Weapon

The hybrid solution's data contents are summarized below.

- Incident information includes details related to uniform crime reporting such as details related to the incident, case, offense, subject, arrest, victim, officer, property/vehicle, location, and arrestee.
- Arrest information includes details such as subject, offense, charge, arresting agency, bond information, victim information, and vehicle details.
- Location information includes individual address elements such as street number, street name, city, and latitude and longitude.
- Organization information includes organization name, organization type, and agency ORI code for law enforcement agencies.
- Person information includes name separated into first/middle/last/suffix, date of birth, identifiers such as social security number, race, sex, ethnicity, and descriptors such as hair color, height, weight, etc.
- Property information includes the identical set of property status values as in NIBRS, but property is organized by the piece of property as in the FDSP.
- Includes equivalents for all of the additional hate crime data fields that Florida currently collects.
- Includes equivalents for all domestic violence offense codes and relationship types currently collected by Florida.
- Includes equivalents for all use of force data elements.

The hybrid approach provides the capability, using a component known as the FDLE CJIS Portal, to include sensitive data in a data submission by including explicit dissemination criteria as defined by the N-DEX program and as needed to support other legislatively mandated work, like Criminal Justice Data Transparency (CJDT) and the uniform arrest affidavit. The Portal will not share sensitive data with the FIBRS Repository component. This allows accurate and complete NIBRS and UoF data to be extracted from the Florida FIBRS repository while restricting the sharing of sensitive data. Data used to generate NIBRS and UoF statistics do not include any personally identifiable information. Data marked as non-sensitive can be forwarded to the FDSP. By leveraging the N-DEX data markings, the Florida system can potentially forward data to N-DEX with the appropriate markings for that system.

The design of the hybrid solution includes all data elements for the various data sets (i.e., NIBRS, FDSP, hate crime, domestic violence, etc.) that must be supported by Florida. Previously, these data sets were reported separately with numerous overlapping data elements. Some of the reporting was done manually by personnel at the agencies and at FDLE. These manual processes required extra work and increased chances for data entry errors. Therefore, one of the goals of the hybrid solution is to minimize the number of data sets and data submission processes that must be supported by state and local agencies and this approach will also eliminate manual steps in the data submissions process. This approach will also leverage

the Portal to security manage data to be shared with other systems like CJDT and the Computerized Criminal History (CCH) system.

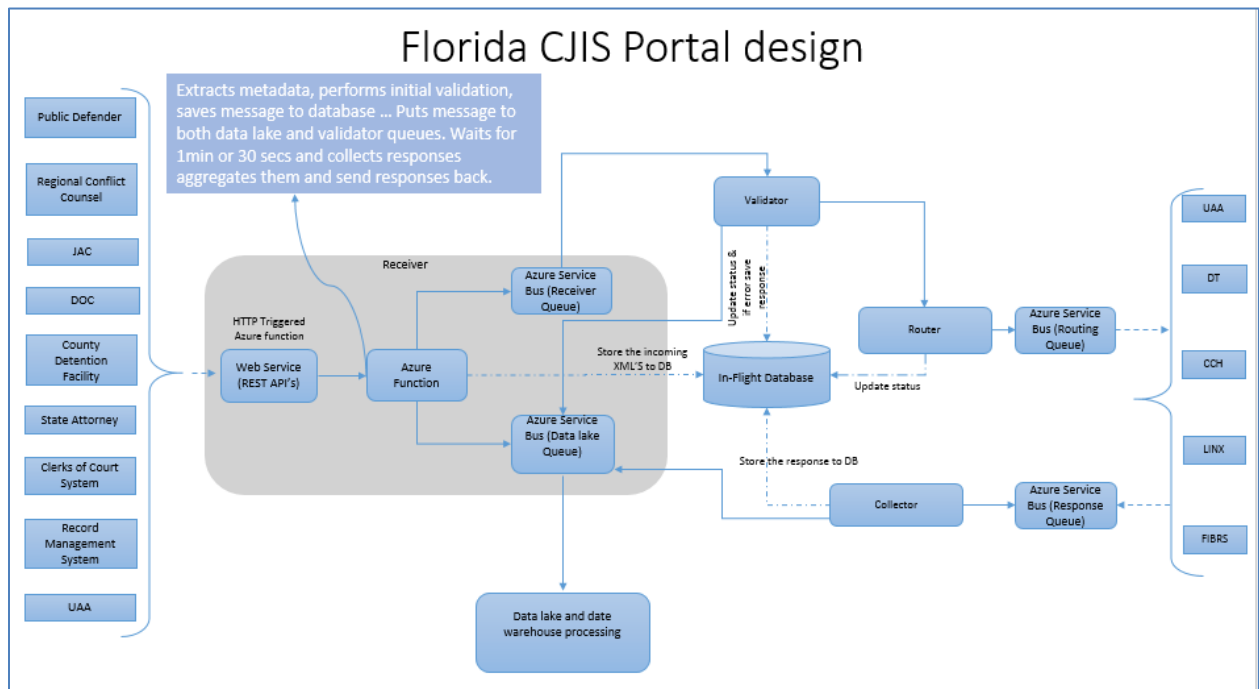

This approach will define and implement business rules to ensure the data is consistent and of high quality, and will incorporate the required NIBRS business rules.

Data Submission

The hybrid data specification is defined in the form of a NIEM IEPD(s), which includes extensive information for mapping the hybrid data model to NIBRS. The hybrid data specification extends the NIBRS data model so that existing RMS and repository vendor products, software tools, and documentation can be leveraged for implementation and interoperability. NIBRS and NIEM also provide a number of free-to-use tools that can be used by vendor and agency implementers for testing, to ensure conformance to the business rules, and to simplify development; these tools can be modified to support the Florida implementation rather than developing comparable tools from scratch.

Data will be submitted to the FDLE CJIS Portal by state and local agencies. The Portal will extract the raw data and send relevant data to the FDSP and other systems. Non-sensitive data for NIBRS, Use-of-Force and Florida specific crime reporting will be shared via the FIBRS repository. During this process, the data will be checked against all applicable business rules as well as any other data quality requirements. In case of data quality issues, the submitting agency will be notified so that errors can be corrected. For both components, authorization is managed through integration with a third-party provider.

The data submission process is outlined in the conceptual diagram below. “State/Local” refers to state and local law enforcement agencies across Florida. They may send their data to the FIBRS repository via the Florida CJIS Portal located in Microsoft Azure government cloud, where data collection, validation, and state reporting will occur. Furthermore, data is submitted in various formats to other analytical and investigative law enforcement programs.

Administration and Data Functions

The hybrid repository includes application servers and web interfaces to implement agency and user management, data upload, review, validation, and other miscellaneous administrative functions:

- Collect and store all incident data submitted by state and local agencies
- Store state and local agencies, including their names, locations, ORI code, etc.
- Store authorized agency FIBRS users
- Store authorized FDLE FIBRS users
- Add, delete, and edit users in the system; modify authorizations and privileges
- Assign roles to users
- Download and review the generated agency crime statistics by the agency users
- Examine any data quality issues and allow the reporting agencies to update their data
- Approve agency data submission for submission to the FBI
- Designate that agency data is not to be included in a data submission to the FBI
- Track data submissions and approvals by individual agency; show status of progress, error correction, and approvals; provide reminders to agencies to complete their required tasks in a timely manner
- Collect agency/jurisdiction population data to be used for statistical analysis in the annual Crime in Florida report and other reports
- Accept UCR Summary data submissions from state and local agencies until FDLE determines that a sufficient number of agencies are submitting data to FIBRS
- Generate state crime data and statistics (i.e., Crime in Florida report, etc.) to be published
- Publish and disseminate state crime data and statistics to the public, media, and government officials
- Provide training and support to the agencies' administrative personnel in the use of the above functions
- Provide option to submit data to FDSP
- Provide options on what data is restricted from the submission to the FDSP

1. Summary Description of Proposed System

There are three major components that are part of the planned approach: (a) the Florida CJIS Portal that receives, stores and processes data from agencies, (b) the FIBRS repository that further processes NIBRS and UoF data, and generates data submissions for transmission to other systems such as NIBRS at the FBI, and (c) a state-provided RMS for agencies that do not have their own RMS, have an RMS that cannot be reasonably upgraded to support incident-based reporting, or that desire to use a state-supported RMS rather than maintain their own.

System Type

FIBRS will host all data submitted by state and local agencies to FDLE, and will include a machine-to-machine web service for agencies to upload data to FIBRS.

FIBRS and the Portal include an application server, web server, and a database server, with a web-based interface to perform numerous administrative and managerial functions related to user management and data handling, as described above. FIBRS is hosted in FDLE's Microsoft Azure government tenant.

The state-provided RMS will be a data warehouse hosting all data submitted by officers at agencies using the RMS. The RMS will leverage cloud services and software-as-a-service.

Connectivity

FIBRS will interface with the FBI, local agencies and FDSP systems over existing secure connections. FDLE personnel will connect to FIBRS over a secure interne connection. State and local agency representatives will connect to the system over secure connection with the agencies.

The state-provided RMS will be accessible over a secure connection to allow officers to enter data from incident locations as well as their offices. Officers will be able to enter data into their mobile data terminals (MDTs) or office computers for transmission to the RMS. In locations where network service is not available, the data will be stored on the MDT until network service is available, at which time the data will be transmitted. Agency supervisors and records management personnel will be able to review and approve data from their office computers.

Security, Privacy, Confidentiality, Access

These standards will be the same as the current security standards used by FDLE.

Since FIBRS will contain personally identifiable information, data controls will be established to ensure that access to sensitive data is restricted to appropriate personnel, while allowing the data necessary for crime statistics reporting to be accessible by the Florida Statistical Analysis Center (FSAC).

Development and Procurement Approach

To realize the business solution, FDLE plans to acquire commercially available systems that can be customized to meet FDLE’s business requirements. The contracted systems will include, but are not limited to:

- Commercial NIBRS repository
- Commercial RMS product
- Contracted services to upgrade local agencies’ RMS products
- Project management services
- Software customization services
- Data analysis and migration services
- System integration and testing services
- Implementation and configuration
- Training services

Internal and External Interfaces

FIBRS will communicate with the following external systems:

- FBI NIBRS (outgoing)
- FDSP (outgoing)
- FBI Use-of-Force (outgoing)
- Law Enforcement Employee Count
- Florida state-provided RMS (incoming)
- All Florida state and local agency RMS (incoming)
- State’s Statute Table
- Florida’s uniform arrest affidavit
- FDLE’s Data Transparency Solution
- FDLE’s Data Visualization Tool

The state-provided RMS will communicate with the following systems:

- FIBRS (outgoing)

SCHEDULE IV-B FOR FLORIDA INCIDENT-BASED REPORTING SYSTEM (FIBRS) IMPLEMENTATION

- Officer MDTs at agencies using the RMS (incoming)
- Officer, supervisor, and records management personnel desktop systems (incoming)
- State’s Statute Table
- Florida’s uniform arrest affidavit
- FDLE’s Data Transparency Solution

Maturity and Life Expectancy of the Technology

FDLE intends to procure a vendor solution which is mature and used in other states. The systems will be updated by the vendor when upgrades are available for the underlying vendor product. The vendor solutions will be flexible to facilitate future changes and upgrades.

Other Systems to be Integrated With

The systems will interface with the systems indicated in the “Internal and External Interfaces” section above. These systems will not be tightly integrated since system-to-system data submissions will be accomplished via the transmission of data files through a web services interface. Agency and FDLE users will interface via web applications.

2. Resource and Summary Level Funding Requirements for Proposed Solution (if known)

FIBRS is hosted in FDLE’s Microsoft Azure government tenant. The state-provided RMS will not require hardware to be procured, because it will also leverage cloud services and software-as-a-service.

Anticipated total project costs are summarized in the table below:

Title:	Florida Incident-Based Reporting System						
Tracking #:	TBD						
Customer:	Criminal Justice Information Services			Customer Contact:	_____		
Manager:	Kristen Grosh			ITS Lead:	_____		
Planned Start:	7/1/2019			Planned Finish:	6/30/2023		
Duration (mos):	48.7						
Baseline Date:	7/1/2019						
Revision Date:	10/8/2020			Version #:	3.0		
Project Budget	Actual	Actual	Actual	Planned	Planned	Planned	
Cost Elements	Prior Years	FY 18-19	FY 19-20	FY 20-21	FY 21-22	FY 22-23	Totals

E. Capacity Planning

(historical and current trends versus projected requirements)

The overall process of the planned system includes agencies processing and submitting data to FDLE as well as FDLE processing and analyzing data for internal and public use and subsequently submitting data to the FBI. However, for the purposes of this section, only components under the control of FDLE are included since agency RMS systems already collect and store incident data and the transition to incident-based reporting by FDLE does not significantly impact agency RMS system capacities or capabilities.

There are three major components that are part of the planned approach:

1. The Florida CJIS Portal that receives, stores and processes data from agencies,
2. The FIBRS repository that further processes NIBRS and UoF data, and generates data submissions for transmission to other systems such as FBI NIBRS, and
3. A state-provided RMS system for agencies that do not have their own RMS or that desire to use a state-supported RMS rather than maintaining their own.

Each of these major components is covered separately below.

Historical and Current Information

FIBRS

Current data submission transactions from state and local agencies are limited due to the restrictive design of the UCR Summary data collection. Most agency data are submitted twice per year, with some data only collected once per year. Limited data is submitted more frequently; in 2016 this data consisted of fewer than 300 reports. UCR Summary data reporting was originally designed more than a half century ago to be suitable for paper reporting and has not been significantly updated since then. The data is statistical in nature so the size of the data sets and the number of records is relatively small by modern standards. The number of agencies submitting data directly to FDLE is approximately 400. Therefore, data capacity, network bandwidth, and processing power requirements are currently low.

State-provided RMS

The state does not currently provide such a service.

Projected Requirements

FIBRS

The required transition from a UCR Summary statistical reporting process to a FIBRS incident-based process means that data set size will increase significantly, and the frequency of data submissions will go from semi-annual to daily and monthly. Therefore, the historical capacity and capabilities of the existing hardware, software, and network do not provide a foundation for determining projected requirements. However, the information available regarding the number of agencies and number of incidents does provide input into projected requirements.

The inclusion of FDSP data that will be forwarded to the FDSP repository means that FIBRS must be capable of receiving, processing, and transmitting data on a daily basis. When errors or other issues are identified in submitted data, or when additional information regarding an incident becomes available, an agency can update and then resubmit the data to FDLE, meaning that some incident data may be submitted

multiple times.

The transition from UCR Summary to NIBRS for statistical analysis of incident data will increase reporting frequency from twice annually to monthly, with a significantly larger data set requiring application of a complex business rule set to enforce much higher data quality. Additionally, NIBRS supports more frequent reporting than monthly, so some agencies may report weekly or by any other desired schedule.

While the actual capacity planning can only be done after the detailed design of the system is completed, some generalizations can be made.

- Over 600,000 offenses were reported during the previous annual reporting cycle, for an average of almost 1,700 per day or 50,000 per month.
- Some incidents may be submitted more than once either due to the availability of additional data or to make corrections and/or updates to an earlier submission. Assuming ten percent (10%) are resubmitted, the average number of incidents submitted would increase to over 1,800 per day or 55,000 per month.
- All incident data is expected to be retained indefinitely.
- Original XML data submissions will be retained indefinitely.
- While there is not an expectation that agencies will submit historical (i.e., pre-FIBRS) data to FIBRS, some agencies may submit all data that has not previously been submitted, which would include historical data.
- Some agencies may submit data weekly or monthly rather than daily, requiring greater capacity to handle larger data files. It is expected that these larger file submissions would occur over a short period of time at the beginning of the month, increasing the maximum capacity required to accept data submissions.

In addition to the primary FIBRS system, a back-up system must also be acquired, so operations can continue if the primary system is down for a period of time. While FIBRS will forward incident data on a daily basis to the FDSP, a slowdown or short delay in submitting data to the FDSP is not catastrophic. Data submissions to the FBI for NIBRS and Use-of-Force will occur monthly; a slowdown or short delay in submitting this data does not create issues with these programs.

State-provided RMS

Based on the online survey conducted by FDLE, it appears that fewer than 15 agencies currently lack an RMS, totaling fewer than 600 officers. However, it is anticipated that as many as 100 small and medium agencies totaling as many as 4,000 officers may switch to a state-provided RMS in order to upgrade to a modern system, simplify operations, and lower costs. Therefore, the hardware must be sufficient to support the larger user base. While the details will depend on the user pricing model of the selected product, licensing and upgrades must support adding additional users as new agencies come online. RMS software licensing prices and capacity requirements are driven by the number of officers and agencies rather than the number or frequency of incident data collected. Therefore, detailed estimates for the number of incidents, transaction frequency, peak transactions, etc., are not required.

A large percentage of the data elements that must be supported by the FIBRS RMS are already included in all basic RMS products. Additional system processing and storage capacity required to support data elements that are not already part of the "base" RMS will be determined during negotiations with the selected vendor, but are expected to be minimal.

In addition to the primary state-provided RMS system, a back-up system must also be acquired so

operations can continue if the primary system is down for a period of time. Since the RMS is used in real-time by officers, data entry and access responsiveness for the back-up system must be equivalent to that of the primary system, requiring the back-up system to have equivalent processing power, networking capacity, and storage capacity as the primary system.

VII. Schedule IV-B Project Management Planning

Purpose: To require the agency to provide evidence of its thorough project planning and provide the tools the agency will use to carry out and manage the proposed project. The level of detail must be appropriate for the project's scope and complexity.

FDLE has a Project Management Plan that includes:

Project Scope

The scope of this project is to implement and deploy solutions for Florida to collect and process incident-based crime data from participating local and state criminal justice agencies. The solutions provide data to NIBRS, Use-of-Force, and LInX and provide a means to store and display state of Florida only statistical data. The solutions also automate the collection, storage, and submission of law enforcement employee count data and population data.

The following are in scope for this project:

- Implementation of the technical specification for an incident-based reporting program that supports the needs of NIBRS, Use-of-Force, LInX, and any additional data required by Florida for hate crime and domestic violence
- A state records management system
- A state repository for the incident-based crime data that can collect, extract, and submit data to NIBRS, Use-of-Force and LInX on behalf of state and local agencies
- Platforms, including development, test, production, and disaster recovery environments, to support the state repository and state records management system
- Funds for modifying state and local agencies' RMS, including the management of funds
- Processes and procedures that involve interfacing the repository with:
 - FBI
 - NIBRS
 - Use-of-Force
 - Law Enforcement Employee Count
 - Florida's LInX System
 - State Agencies' Records Management Systems (RMS)
 - Local Agencies' RMS(s)
 - State's Statute Table
 - State's RMS
 - Florida's uniform arrest affidavit
 - FDLE's Criminal Justice Data Transparency Solution
 - FDLE's Data Visualization Tool

The following is out of scope for this project:

- A web based mechanism to disseminate state and local crime data and statistics to the public, media, and government officials in a timely manner

Project Phasing Plan

This project consists of three high-level phases: detailed planning, procurement/contracting, and implementation and deployment. Given the number of state and local agencies that will interface to the FIBRS repository, and the number of initial and future agencies that are anticipated to use the state-provided RMS, the overall timeframe for this project is relatively long. In addition, FDLE needs to have systems in place and at least a partial set of agencies reporting NIBRS data by the time the FBI stops accepting UCR Summary data in January 2021. Therefore, all phases of the project will overlap so at least partial functionality is in place by then.

Phase 1 - Detailed Planning

The detailed planning phase involves designing and developing the FIBRS technical specification and technical requirements, assembling the project team, and establishing mechanisms for FDLE to collaborate with state and local law enforcement agencies and with vendors. The technical specification and technical requirements documentation have been provided to state and local agencies that have developed their own RMSs. FDLE identified agencies interested in using the state-provided RMS to review requirements defined by FDLE and to review product offerings. During this phase, FDLE will also continue to collect and update information collected during readiness assessments to fill in missing information and to make updates as agencies change their RMSs.

Phase 2 - Contracting

This phase of project includes obtaining funding and statutory approvals to move forward with procurement process. The specifications and requirements developed during the detailed planning phase will be used to develop procurements for both the FIBRS repository and state-provided RMS. FDLE has procured a vendor(s) commercial product for FIBRS repository. FDLE is procuring a vendor(s) commercial product for a state-provided RMS.

Phase 3 - Implementation and Deployment

The implementation and deployment phase began as soon as the technical specification and requirements were available since agencies and vendors could begin efforts to upgrade their existing RMS products. In addition, FDLE began development of a test plan and various documentation and software tools to simplify development and testing of products. Once the contracting phase was complete, vendors started customizations to the products that will be used for the FIBRS repository. Work on the state-provided RMS will begin when its contracting phase completes.

FDLE worked with agencies to determine the first set of RMS products to upgrade, and FDLE provides technical assistance to those agencies to aid with the rapid adjustment, to answer questions, and to provide support to ensure a successful upgrade and deployment. FDLE focuses primarily, but not exclusively, on agencies that are part of the NCS-X sample agencies that the FBI needs to be able to generate accurate nationwide NIBRS crime statistics. FDLE will work with the FIBRS repository and state-provided RMS vendors to provide similar technical assistance. FDLE will also work with the state-provided RMS vendor to interface the RMS to the FIBRS repository via the Portal.

Once the state-provided RMS is deployed, FDLE will work with an initial set of agencies to onboard them to the RMS. FDLE will focus primarily, but not exclusively, on agencies that are part of the NCS-X sample agencies that the FBI needs to be able to generate accurate nationwide NIBRS crime statistics. Once the

initial set is operational, additional agencies will be brought onboard with the state-provided RMS.

During this phase, FDLE will also work with the NCS-X Implementation Team and FBI NIBRS programs to start submitting data to NIBRS. FDLE will work with the FBI to submit data to the Use-of-Force repository. FDLE will coordinate with the state FDSP repository to forward appropriate data to the FDSP. Work will be done on an agency-by-agency approach as agencies submit data to FIBRS.

Toward the end of this phase, the FIBRS repository and state-provided RMS will have been deployed for approximately two years. While it is anticipated that FDLE will still be bringing agencies online with both the FIBRS repository and the state-provided RMS, the number of agencies being brought online will have slowed. However, by this time, desirable additional features or requirements may have been identified, technology advances may be available that would improve the process and related systems, user requests may have been received, new features may be available in the various products, etc. Therefore, it is anticipated that a round of feature enhancements and technology refreshes will be beneficial to improve services, stay current with technology, and continue to improve the overall process. These enhancements and refreshes will be conducted in parallel to any ongoing work to bring agencies online with the FIBRS repository and the state-provided RMS. In addition to defining operational processes and procedures, FDLE will retire and decommission outdated business process, tools, methods, and functions that no longer add value to the FIBRS process.

Baseline Schedule

A baselined schedule can be found in Appendix G. The detailed project schedule is maintained as a separate document using Microsoft Project. The schedule consists of three files: a master schedule and two sub-schedules (contract's schedule and an FDLE project schedule). The project schedule and budget were baselined in early June 2020. Once a contract is established with a RMS vendor, that schedule will be added.

Project Organization

The comprehensive nature of the FIBRS repository and RMS necessitates the coordination among a variety of disparate agencies and groups. This project requires coordination and management of a skilled project staff consisting of technical, functional, and administrative staff, mixed with contract staff and task-specific vendors.

The FIBRS Project organization consists of the Executive Steering Committee (ESC), Project Steering Committee (PSC), the Project Manager, and the Project Team. FDLE SME's and a number of other groups provide additional support.

FDLE Executive Steering Committee

The Executive Steering Committee consists of the Assistant Commissioner (Public Safety Services), Director of CJIS (also the project sponsor), Director of Business Support, and the Chief Information Officer (CIO). The CJIS Director, Director of Business Support, and the CIO report to the Assistant Commissioner of Public Safety Services. The Executive Steering Committee provides guidance on project decisions that impact scope, schedule and budget.

FDLE Project Steering Committee

The PSC monitors project status and has decision making authority over the project that impacts

the scope, schedule, and budget. Critical project needs are evaluated and with direction provided to the Project Manager (PM) as appropriate focusing on the project's current status, budget and spend plan, open issues, change requests, risks, and communications. The PSC assists in identifying and securing project resources and are responsible for approving project deliverables.

A status report is prepared for each meeting and is distributed to each attendee. The members of the PSC represent the following organizations:

- Florida Police Chiefs Association
- Florida Sheriffs Association
- State Law Enforcement Agency
- FDLE – Business Support Program
- FDLE – Information Technology Services
- FDLE – Criminal Justice Information Services
- FDLE – Criminal Justice Information Services

Project Manager

The PM is responsible for the overall management and coordination of the work effort and successful completion of the FIBRS project. The PM monitors the day-to-day status of project team efforts. This includes establishing and maintaining the project management plan, assigning, directing, and monitoring the work of project staff, serving as FDLE's primary point of contact for the prime contractor(s), managing issues and risks, monitoring and reporting project status, and reviewing contract deliverables prior to delivery to the PSC for approval.

Project Team

The FIBRS Project Team consists of a core group of FDLE members responsible for the day to day tasks associated with the project. This team is comprised largely of members of CJIS, ITS and any other project staff positions (state positions or Contractors) deemed necessary for the successful completion of the project. The Project Team created a Resource Plan which defines all resources for the project including all positions deemed necessary.

Contract Manager

As a member of the Project Team, the Contract Manager is responsible for gathering the necessary information for developing the Statement of Work (SOW) and other contracting vehicles, monitoring the award of those contracts, ensuring performance delivery as required by the contract and closing out contracts when the tasks are completed. The Contract Manager works closely with FDLE contract and legal members to ensure that all work is accomplished within State and FDLE contracting rules and guidelines. The Contract Manager will coordinate budget issues and maintain awareness of all expenditures and accounts payable.

FDLE Implementation and Transition Unit (ITU)

A subset of the Criminal Justice Analytics Bureau (CJAB) that will serve as the ITU which acts as the conduit through which user community stakeholders and program personnel communicate, ensuring the resulting services are compliant with the mission. This includes policy identification/coordination for new services, questions for the record, and public inquires. This project requires extensive coordination with local agencies as they make modifications to their systems to become compliant with state specifications.

Project Administrator (PA) and Program Manager (PgM)

The CJIS PA and PgM oversee all CJIS projects to ensure they meet FDLE's strategic plan. The PA and PgM leverage the resources and responsibilities of related projects so that they mutually benefit one another and thereby achieve division goals and objectives. The PA and PgM coordinate the overall activities of the division area so that different projects do not interfere with one another's progress but instead share resources effectively and efficiently.

Quality Assurance Plan

The focus of the quality management process is to build effective processes that enable the production of high quality deliverables that meet the specified business requirements. The quality management procedure consists of two principal processes: Quality Assurance (QA) and Quality Control (QC).

Quality Assurance

QA is the practice of adhering to planned, established and systematic approaches designed to ensure the high caliber of the deliverables and the detection and correction of any errors. It provides information about a common set of guidelines and standards to be applied by the Project Team. The primary aspect of a QA review is to ensure that the processes established for the project are being followed. If new processes are required, a group will be formed to establish the quality procedure. The benefits of following quality assurance processes include the following:

- Improved communication
- Improved planning and requirement gathering/definition processes
- Improved development process
- Improved product quality
- Better criteria for hardware and software testing
- Easier transition to production for hardware and software

The most effective QA activity is a formal QA review. The Project Team will conduct these reviews of project processes. Using results generated by this review, the PM will direct follow-up actions to ensure that the project uses sound processes. Additionally, the ESC will advise the PM of any observed deficiencies in processes and the PM will take corrective action to resolve the deficiency in the future.

Quality Control

QC activities are those focused on the inspection and/or testing of the deliverable produced. The QC Team verifies that the deliverables are of acceptable quality and that they are technically accurate. QC is the responsibility of the Project Team and the PM or Task Lead responsible for a deliverable. The PM monitors the activities associated with the acceptance of deliverables. QC is conducted before a deliverable is submitted as final to be approved by the PM. The Project Manager is responsible for developing and maintaining a Quality Plan. The Quality Plan will document major deliverables of the project, completeness and correctness criteria, quality control activities and quality assurance activities.

Topics Addressed in the Quality Plan:

Quality Control activities associated with project deliverables:

- Document Deliverables
- Hardware and Software Deliverables
- Service Deliverables

Quality Assurance activities:

- QA processes (Requirements Traceability, Testing, Data Migration, etc.)
- Responsibility for QA processes

Quality Metrics for the project such as:

- Customer Satisfaction
- IT Satisfaction
- Vendor Satisfaction
- Changes in Scope
- Changes to Schedule
- Changes in Cost
- Number and Type of Issues
- Number and Type of Defects
- Preparedness of customer to assume production responsibilities
- Preparedness of IT to assume production responsibilities
- Solution “Fitness for Use”

System testing and operational acceptance testing are the primary QC processes used to assure that deliverables meet FDLE’s documented requirements. System testing will involve specific testing and measurement at a technical level to verify compatibility, usability, performance, accuracy, and content of results.

Project Oversight

The project team reports as required to the following entities:

- Bureau of Justice Statistics (BJS)
- Department of Management Services (DMS)
- Florida Legislature
- Governor’s Office
- Independent Verification and Validation (IV&V)

Criminal and Juvenile Justice Information Systems (CJJIS) Council

The CJJIS Council provides statewide oversight of justice information systems and data while developing plans and policies to facilitate the coordination of information sharing and interoperability, and ensuring appropriate access and security.

Change Management

Change management occurs throughout the lifecycle of the project. A change can be related to any facet of the project – scope creep, schedule revision, funding / cost changes, team / resource changes, issues and risks, etc.

If the change is minor, the PM may determine that the change can be met within current project parameters and the formal change process is not necessary. If the change could impact requirements, deliverables, payment schedule, cost, or completion date of a major milestone, the PM (or team member assigned) will fully research the impact of the project change and formulate a resolution. The PM will complete a formal Project Change Request form and present the change to the Project Steering Committee.

The Project Steering Committee will determine if the proposed change should be approved. Members of the Project Steering Committee will signify approval or disapproval of a proposed project change by signing the Project Change Request form.

The PM and/or PSC may consult with the ESC if the proposed change significantly alters requirements, deliverables, payment schedule, cost, or completion date of a major milestone. The ESC will determine if the proposed change should be approved.

If the PSC or ESC determines that the approved project change will require a Contract Amendment, the PM will work with the vendor to prepare the Contract Amendment for the PSC's review and approval. The contract amendment will then be processed according to FDLE contract procedures.

Communications Plan

The PM developed a Communications Plan to provide a framework for addressing change management with customers. The Communications Plan outlines a comprehensive strategy of both communicating project and process change information to the FIBRS customer base and others affected by the project as well as receiving and processing input/feedback from customers and others. The Communication Plan identifies communication strategies which will be used to target the different audience groups (users, stakeholders, advisors, media, decision-makers, etc.) via an assortment of communication methods (Internet and email, formal and informal documents, multi-media presentations, and face-to-face meetings). This document serves as the core of the FIBRS change management effort and will be updated throughout the life of the project.

Effective communication and outreach, both internal and external to FDLE is critical to the overall new repository and statewide RMS during the design, development and implementation phase of the project and to ensure increased understanding, involvement, and buy-in from all stakeholders. The objectives of the Communications Plan include the following:

- To ensure that target audiences are aware of and understand the purpose and mission of FDLE, particularly as it relates to crime statistics reporting, understand the rationale for development of a new system, and know what will and what will not change as a result of this project.
- To ensure that all audiences and stakeholder groups recognize the benefits of an updated reporting method, and how it will help organizations achieve their criminal justice objectives.
- To provide information to external customers on how implementation of the updated FIBRS may affect current and future work processes and what will be done to mitigate any perceived negative effects, address and clarify any unrealistic user expectations, and achieve "buy-in" from the internal and external user community.
- To maintain a dynamic and proactive communications campaign, in which information is updated and continuously provided for the benefit of the entire user community, and to establish a culture in which feedback is encouraged and is gathered and evaluated to ensure that project objectives will be met and project goals achieved.

The PM is responsible for developing and maintaining a Communication Management Plan. This plan documents how and in what format information will be communicated, when and where communication will be made, and who is responsible for providing each type of communication.

Topics included in the Communication Management Plan:

Target Audience - Identification of all possible audience groups in as much detail as possible:

Specific stakeholder groups (Police Departments, Sheriff's Offices, etc.)

- Project Team
- PSC
- FDLE management
- FDLE customers
- Legislature
- Oversight agencies

Communication Method Communications may be formal, such as status reports, Operational Work Plans, newsletters, and quarterly meetings or informal such as notices or announcements through email or website. Communications may also be in written form or face-to-face. Examples include such things as:

- Status reports
- Operational Work Plans
- Stakeholder /customer surveys
- Project newsletters
- Pamphlets
- Project website
- Ad Hoc notices
- PSC meetings
- Project Team meetings
- FDLE Executive Management briefs

Method of Delivery - Methods of delivery could be such things as:

- Emails
- Presentations
- Reports
- Website
- Documents (electronic or paper)
- Meetings

Frequency

Some communications could be set at regular intervals such as meetings or reports required annually, quarterly, biweekly, etc. or upon specific project milestone or phase timelines according to project needs. Some communication could also be random and event-specific such as notices dealing with specific issues.

Responsibility

Each type of communication must be assigned to the PM or a specific member of the Project Team.

Risk Management

The selected vendor(s) will provide a Risk Management Plan that describes the plan to manage risks throughout the life of the project. A risk refers to future conditions or circumstances, which will have an adverse impact on the project if they occur, that exist outside of the control of FDLE or the Project Team. In other words, a risk is a potential future problem. Risk management is performed continually over the life of the project. Risk management includes the following:

Step 1: Identify major risks to project success

Step 2: Assess the potential impact of each risk and its probability of occurrence

Step 3: Determine appropriate contingency plans

Step 4: Determine the acceptable level of tolerance for each risk

Step 5: Specify mitigation strategies to be implemented for critical risks

Step 6: Periodically review the effectiveness of mitigation strategies and identify any new risks.

Risk identification occurs throughout the life of the project. Any project stakeholder, Project Team member, customer or contractor can submit a risk at any time. A risk mitigation session is conducted at the start of each build or phase. The PM will manage the FDLE risk documents which one of the artifacts maintained throughout the life of the project. Distribution of the risk document will be agreed upon between the FDLE and the vendor PM at the beginning of the engagement. The risk document will be an electronic document and available to the Project Team at all times during the project.

The PM (in consultation with the PSC) evaluates the risk and recommends a risk level. The risk level is used to set the priority of the risk and determine how risks should be addressed.

Risk management includes an ongoing cycle of risk identification, analysis and monitoring. Each risk with a risk level of medium or high is evaluated to determine if the impact is severe enough that a risk mitigation plan should be created. If a risk mitigation plan is required, the risk is investigated to determine whether or not the resolution of a risk causes the budget, personnel, scope or schedule to change. In the event a risk mitigation plan must be exercised, project change control processes will be used (if necessary) and activities associated with the risk mitigation plan will be added to the Project Schedule to ensure the work is completed. The PM monitors all risk mitigation plans to ensure they are being executed successfully.

Implementation Plan

One of the most important goals of the entire implementation plan is to ensure that state and local agencies do not have to bear the cost of the transition to incident-based reporting. Therefore, significant assistance will be provided to agencies and vendors to educate them on the new specifications, and to simplify development, testing, deployment, and training. FDLE will provide funding to agencies to upgrade their vendor or in-house RMS products, to deploy the upgraded versions, and to train-the-trainer for these products. FDLE will also provide tools and software so vendors and agencies do not have to duplicate each other's efforts. This assistance is part of all aspects of the implementation plan described below.

As noted previously, there are three major components that are part of the planned approach: the FIBRS repository, the Florida CJIS Portal, and the state-provided RMS system for agencies that do not have their own RMS or that desire to use a state-supported RMS rather than maintaining their own. The systems will be based upon a FIBRS technical specification that is geared towards meeting Florida's needs for NIBRS, FDSP, Use-of-Force, and the Florida-specific data elements required for hate crime and domestic violence reporting.

At the highest level, the implementation plan consists of the following:

- Develop and publish the technical specification,
- Acquire, customize, and deploy a commercial customized repository and a customized RMS system to meet FDLE's business requirements,
- Update existing RMS systems in use by state and local agencies to adhere to the technical specification,
- Test with agencies to work with the FIBRS repository,
- Test with agencies to submit NIBRS and Use-of-Force data to the FBI,

- Forward FDSP data to the FDSP system, and
- Retire the existing UCR Summary systems.

FDLE developed the FDLE technical specification using the existing FBI NIBRS specification as the foundation. This specification includes complete documentation, data elements listings, diagrams, and sample data submission messages. FDLE has also established a CJNet portal where agencies can download the technical specification, access documentation and software/tools, ask questions, and request assistance.

The procurement for both the FIBRS repository and the state-provided RMS will include the technical specification so that vendors have complete technical information on the data to be submitted and/or stored, and they will be able to review the specification and provide feedback on errors or potential places of improvement. The technical specification was released to agencies that have developed their own RMS so they can review the specification and provide feedback.

As the procurement contract are in place for the FIBRS repository and state-provided RMS, the vendor(s) will modify their products to meet FDLE's needs, including:

- Conformance to the FIBRS technical specification for data coming into FIBRS,
- Conformance to the FBI NIBRS and Use-of-Force technical specification for data going from FIBRS to the FBI,
- Ability to submit data to the FDSP repository in the state, and
- Adherence to the business process requirements and the functional and technical requirements defined by FDLE.

FDLE established a small working group of agencies interested in using the state-provided RMS to assist in the selection of the RMS. This group helped to establish requirements, review information on available products, participate in demonstrations.

In parallel with the acquisition, customization, and deployment of the FIBRS repository (including the Portal) and state-provided RMS, FDLE will work with vendors and agencies to update their RMS products to conform to the FDLE technical specification. Initial efforts will focus on vendor and in-house RMS products in use by sample agencies identified by the NCS-X project. FDLE will provide technical assistance to vendors and agencies regarding the various specifications and requirements to simplify implementation and to ensure interoperability. FDLE will start with a small set of RMS products and the selected test agency to educate and support the vendor and agency. As vendors and agencies make progress and need reduced technical assistance, FDLE will start to provide assistance to additional vendors and agencies. Given the number of different RMS products in use in the state, the upgrade process will be a multi-year undertaking and is expected to continue beyond January 1, 2021, when the FBI is scheduled to cease accepting UCR Summary data.

FDLE will provide funding to agencies to upgrade their vendor or in-house RMS products, to deploy the upgraded versions, and to train-the-trainer for these products. These upgrades will be prioritized as shown below. Note that all upgrades are dependent on the readiness of agencies and vendors to perform and use the upgraded RMS products. Some agencies and their vendors that are ready to start the upgrade process may move up the priority list over agencies and/or vendors that are not yet ready.

- Upgrade NCS-X sample agencies to FIBRS.
- Upgrade other agencies that use the same vendors as the NCS-X sample agencies.
- Upgrade remaining large population agencies.
- Upgrade remaining agencies that utilize RMS products used by multiple agencies.
- Upgrade remaining agencies that utilize RMS products used by a single agency.

Once the FIBRS repository is deployed, each agency will test their vendor, in-house, or state-provided RMS product for interoperability for FIBRS data submission. Once FIBRS interoperability is achieved, the agency will work with FDLE and the FBI to be NIBRS and Use- of -Force operational.

FDLE will work with agencies and vendors to ensure that FDSP data is properly submitted to FIBRS and forwarded as appropriate to the state FDSP repository; there is no certification process for the FDSP.

As noted previously, FDLE conducted an online survey which collected extensive information on what RMS systems are currently in use in the state. FDLE will continue to follow-up with agencies and vendors to ensure that there is accurate information on products and agencies using them, as well as to identify agencies that are interested in using the state-supplied RMS either because they do not have an RMS or would prefer to use a state-provided system. For products in use by only a few agencies, the state may also realize cost savings by encouraging agencies to switch to the state-provided RMS rather than paying the cost of upgrading the vendor's RMS system.

FDLE will continue to accept UCR Summary data during the transition to incident-based reporting. For agencies that have transitioned to FIBRS, FDLE will convert NIBRS data to the UCR Summary format to allow for comparison of statistical reports to previous years. The agencies will be able to compare their NIBRS crime numbers with what their data would have looked like if they were still submitting according to UCR Summary guidelines. FDLE will generate state crime statistics using these converted UCR Summary statistics combined with UCR Summary data from agencies that have not made the transition until FDLE determines sufficient state and local agencies have transitioned for the state to have representative incident-based data available. Once a sufficient number of agencies have made the transition, FDLE will decommission the UCR Summary systems currently in use.

VIII. Appendices

Number and include all required spreadsheets along with any other tools, diagrams, charts, etc. chosen to accompany and support the narrative data provided by the agency within the Schedule IV-B.

Appendix A – Acronyms and Definitions

Appendix B – Information Technology Standards

Appendix C – FBI Effects of NIBRS on Crime Statistics

Appendix D – FBI Letter of Transition

Appendix E – Current System Operational Cost

Appendix F – Project Cost

FY 2021-22 Schedule IV-B for FIBRS

Appendix A – Acronyms and Definitions

Abbreviation / Acronym	Description
ASM	Application Security Module
BEBR	Bureau of Economic and Business Research at the University of Florida
BJS	Bureau of Justice Statistics, U.S. Department of Justice
CAD	Computer Aided Dispatch
CBA	Cost Benefit Analysis
CJIS	Criminal Justice Information Services
CJNET	Florida Criminal Justice Network. A communications network maintained by FDLE that provides access to state and national criminal justice resources relating to Law Enforcement, Judicial, and Correctional information.
COTS	Commercial Off-The-Shelf
CPU	Central Processing Unit
DABT	Florida Division of Alcoholic Beverages and Tobacco
DAO	Data Access Object
DMS	Department of Management Services
DMZ	Demilitarized Zone. In computer security, a DMZ is a physical or logical subnetwork that contains and exposes an organization's external-facing services to an untrusted network, usually a larger network such as the Internet.
DOJ	U.S. Department of Justice
FBI	Federal Bureau of Investigation
FDLE	Florida Department of Law Enforcement
FDSP	<p>Florida has two systems that agencies use to share record management system (RMS), jail management system (JMS), computer-aided dispatch (CAD), and other investigative data with each other and law enforcement partners outside of Florida. The Orlando region uses the Federated Integrated Network for Data Exchange and Retrieval (FINDER) and the remainder of the state uses the Naval Criminal Investigative Service's (NCIS) Law Enforcement Information Exchange (LInX) system. Both systems are integrated with each other and share data with other LInX systems around the United States including the Department of Defense Law Enforcement Defense Data Exchange (D-DEx).</p> <p>In both systems, the agency data is mapped into a common data format and</p>

FHP	Florida Highway Patrol
FIBRS	Florida Incident Based Reporting System
FSAC	Florida Statistical Analysis Center
FWC	Florida Fish and Wildlife Conservation Commission
FY	Fiscal Year
GB	Gigabyte
IBR	Incident Based Reporting. A crime data collection approach consisting of details of criminal incidents, rather than summary counts as in SRS.
IEPD	Information Exchange Package Documentation. A NIEM specification for a specific data exchange. Contains data describing the structure, content, and other artifacts of the information exchange, supporting a specific set of business requirements.
IG	Inspector General
IT	Information Technology
ITS	Information Technology Services
Kentico	Webpage content management system
LBR	Legislative Budget Request
MDT	Mobile Data Terminal
N-DEx	FBI National Data Exchange. An unclassified national information sharing system that enables criminal justice agencies to search, link, analyze, and share local, state, tribal, and federal records. N-DEx contains incident, arrest, and booking reports; pretrial investigations; supervised released reports; calls for service; photos; and field contact/identification records. Includes over 3,000 data elements.
NCS-X	National Crime Statistics Exchange. An effort to expand the FBI's National

FY 2021-22 Schedule IV-B for FIBRS

Abbreviation / Acronym	Description
	Incident-Based Reporting System (NIBRS) into a nationally representative system of incident-based crime statistics. Managed by BJS and the FBI.
NIBRS	National Incident Based Reporting System. The FBI IBR used by law enforcement agencies in the U.S. for collecting and reporting crime data. Includes 58 data elements.
NIEM	National Information Exchange Model. An XML-based information exchange framework that defines a common vocabulary enabling efficient information exchange across diverse public and private organizations. Supported by DHS, DoD and DOJ.
NLETS	International Justice & Public Safety Network, formerly known as the National Law Enforcement Telecommunications System. Nationwide interstate justice and public safety network for the exchange of law enforcement-, criminal justice-, and public safety-related information.
ODBC	Open Database Connectivity
ORI	Originating Agency Identifier
OS	Operating System
PD	Police Department
PDF	Portable Document Format
R2	Release 2
RAM	Random Access Memory
RMS	Records Management System
SAN	Storage Area Network
SAS	Company name, originally known as Statistical Analysis System
SE	Standard Edition
SME	Subject Matter Expert
SO	Sheriff's Office
SQL	Structured Query Language
SRS	Summary Reporting System. A crime data collection approach consisting of counts of offenses and arrests for certain offense categories occurring over a period of time, rather than criminal incident details as in IBR.
UCR	Uniform Crime Reporting. An FBI program that compiles official data on crime in the United States. Includes SRS and NIBRS, as well as programs for Law

FY 2021-22 Schedule IV-B for FIBRS

Abbreviation / Acronym	Description
	Enforcement Officers Killed or Assaulted, Hate Crimes, Cargo Theft, and Human Trafficking reporting.
UCRDB	System name of one of FDLE's UCR database servers
UCRDBWEB	System name of one of FDLE's UCR database servers
UF	University of Florida
Use-of-Force	Use-of-Force. The FBI program to collect data on police-involved shootings and use of force, which includes any use of force that results in the death or serious bodily injury of a person, as well as when a law enforcement officer discharges a firearm at or in the direction of a person. Includes approximately 90 data elements.
XML	Extensible Markup Language

Appendix B – FDLE’s Information Technology Standards

The following IT standards have been adopted for FDLE’s information systems and services. The application of specific standards may depend on requirements of the systems and services. Questions should be directed to the Division of Information Technology Services.

- a. Architecture
 - Approved cloud computing service is authorized for FDLE applications.
 - Information systems will be developed to operate in a multi-tier architecture
 - Web-based interfaces will be used for the presentation (user) tier
 - Information systems will use load-balancing where appropriate
 - Information systems will operate on clustered server environments where appropriate
 - Development and testing will be performed on separate non-production servers
 - No data or transactions are to be lost due to isolated failures of equipment
- b. Servers
 - Servers will be scaled to handle large bursts of transactions on each interface where appropriate
 - Virtualization will be used when possible
 - Server operating systems will be either Red Hat Linux or Microsoft Windows Server
- c. Storage
 - Information systems will be designed to use redundant storage technologies in primary and backup or secondary (DR) sites
 - Backup and recovery processes will enable the recovery of data and software in the event that primary files are corrupted or destroyed
- d. Network
 - When officer or public safety is involved, CJNET will be the preferred network transport
 - Firewalls will be used to monitor and control incoming and outgoing network traffic
- e. Database
 - FDLE supports relational database(s) using either Oracle RDBMS, Microsoft SQL Server or MySQL
 - Audit logs will capture forensic metadata for all changes to data, including changes made by FDLE staff
- f. Application Software
 - Commercial software products must be reviewed and approved by ITS
 - Software development standards are specified in FDLE Development Standards Version 2.0
 - FDLE supports software development using Java EE or Microsoft .NET
 - Java development standards are specified in Java Development Standards Version 2.0
 - Web-based application standards are specified in JSF Web Framework Standards Version 2.0
 - JBoss is the preferred application server platform used for FDLE information systems
 - Web Services should be used where possible when application communicates outside the agency
- g. Security
 - 28 CFR Part 20 and Public Law 92-544, regulates sharing criminal justice information with criminal justice and non-criminal justice governmental agencies

- Systems that store or process criminal history information shall meet the FBI CJIS Security Policy (CSP)
- Florida Statutes
 - Chapter 119, F.S. – Public Records
 - Section 282.318, F.S. – Security of data and information technology
 - Section 501.171, F.S. – Security of confidential personal information
 - Chapter 943, F.S. – Department of Law Enforcement
- Administrative Rules
 - 60GG-2, F.A.C., Information Security
 - 60GG-4, F.A.C. – Cloud Computing
 - 60GG-5, F.A.C. – Information Technology Architecture Standards
- FDLE Policies -
 - 1.4 – Use of FDLE Resources
 - 2.5 – Information Security
 - 2.6 – Acceptable Use of Information Technology
 - 3.1 – Background Investigations.

- Cloud Computing
 - Microsoft Azure Security Best Practices

- Industry Standards – Where applicable, compliance with the following standards is preferred:
 - Lightweight Directory Access Protocol (LDAP)/Active Directory (AD)
 - Security Assertion Markup Language (SAML)
 - Global Federated Identity and Privilege Management (GFIPM)

- h. Availability
 - FDLE’s standards on availability: minimum 99.5% uptime

- i. Data Communication Standards
 - Sections 282.701 to 282.711, F.S. – Communication Information Technology Services Act
 - National Information Exchange Model (NIEM)
 - FBI Criminal Justice Information Services (CJIS) Standards, including those associated with;
 - National Crime Information Center (NCIC)
 - Interstate Identification Index (III)
 - National Fingerprint File (NFF)
 - National Instant Criminal Background Check System (NICS)
 - National Data Exchange (N-Dex)

- j. Accessibility
 - United States Rehabilitation Act – Section 508 details accessibility standards for all systems
 - Section 282.601 to 282.606, F.S. – Accessibility of Information and Technology

- k. Desktop Computing
 - Microsoft Windows Operating System
 - Microsoft Office
 - Microsoft Visio
 - Microsoft Project
 - Adobe Acrobat

- I. Project Management
 - Sections 282.003 to 282.318, F.S. – Information Technology Management Act
 - Rule 60GG-1, F.A.C. – Project Management and Oversight Standards
 - Project Management Institute, Project Management Body of Knowledge (PMBOK)
 - All production deployments must follow ITS procedure 5.1 “Production Change” CCCB

- m. Deviations from these standards must be directed ITS for review and approval.

- n. All identified technologies must be in a supported version

Effects of NIBRS on Crime Statistics

Executive Summary

Many law enforcement agencies are hesitant about moving from the Uniform Crime Reporting (UCR) Program's Summary Reporting System (SRS) to its National Incident-Based Reporting System (NIBRS) because of the perception that reporting crime through NIBRS will appear to increase the agency's crime. The perception is based on the following reporting differences:

- The SRS collects aggregated monthly crime in ten offense categories.
- NIBRS collects disaggregated offense, victim, offender, property, and arrestee information for 49 offenses.
- The SRS employs a hierarchy rule, which NIBRS does not.
- NIBRS counts up to 10 offenses per incident.

An example of these differences can be seen in an incident involving murder, robbery, and motor vehicle theft. The Hierarchy Rule in the SRS states when more than one offense occurs within an incident, only the most serious crime contributes to the agency's monthly crime totals. Therefore, the agency would count only the homicide for the monthly totals because homicide is the highest offense on the hierarchy. When reported through NIBRS, however, the agency would count the murder, the robbery, and the motor vehicle theft.

Due to the differences between the SRS and NIBRS reporting standards, it can appear that an agency has higher levels of crime after switching to NIBRS. Agencies, of course, understand that NIBRS reporting does not actually increase crime, but often fear that the public, media, and government officials will misinterpret the *apparent* change in crime and attribute the increased crime counts to failed policing administration and leadership rather than a change in how the crime data are being reported. In spite of this concern, NIBRS participation increased from 663 reporting agencies in 1991 to 6,299 agencies in 2014.

Analysis of the NIBRS data and the data that were converted to SRS data sets showed the following effects on reported crime due to the removal of the Hierarchy Rule and to an allowance for reporting multiple offenses:

- Rape: No effect.
- Robbery: Increased 0.6 percent.
- Aggravated Assault: Increased 0.6 percent.
- Burglary: Increased 1.0 percent.
- Larceny: Increased 2.6 percent.
- Motor Vehicle Theft: Increased 2.7 percent.
- Total SRS Offenses: Increased 2.1 percent.
- Incidents that involved multiple offenses: 10.6 percent of all reported incidents.

Agencies moving to NIBRS can use this information to explain that increases in their crime rates are due, at least in part, to the elimination of the Hierarchy Rule and to the allowance of reporting up to ten offenses in a single incident. In addition, the long-term effect of using SRS data to develop policies may be negative because SRS data may not address the true nature of the crime problem.

Introduction

Since 1930, the FBI's Uniform Crime Reporting (UCR) Program has collected statistics from law enforcement agencies who voluntarily submit monthly aggregate totals for seven Part I crimes through the Summary Reporting System (SRS). By the late 1970s, the FBI and its partner law enforcement agencies saw the need for a new crime reporting program which not only included a host of expanded crime categories, but which also collected more comprehensive data about crime incidents in general. After working together to develop the blueprint for a new data collection program, the UCR Program began collecting data through the National Incident-Based Reporting System (NIBRS) in 1991.

Though NIBRS was seen as a major improvement over the SRS, not all law enforcement agencies were willing to make the change to a more robust and disaggregated system for reporting crime data. The cost of changing to NIBRS electronic data submission was, and still is, an expensive transition for law enforcement agencies. Additionally, and aside from potential costs, some law enforcement agency administrators fear that transitioning to NIBRS from the SRS will make it appear that their agency has an unwarranted increase in the level of crime in their jurisdiction. However, the apparent increase in crime volume when switching to NIBRS is easily explained due to the elimination of the Hierarchy Rule. The Hierarchy Rule in the SRS requires that law enforcement agencies only report the most serious offense occurring in an incident, whereas NIBRS collects up to ten offenses for each incident of crime.

It is important to understand the value of data that law enforcement agencies release to the public. The true value of these data are realized only when the data are accurate and the integrity of the data allows for the necessary confidence to make valid conclusions about crime within communities and across the nation. UCR data are used by government entities (at all levels), businesses, and citizens to make important decisions. Administrators choose locations to target resources, businesses choose locations to conduct profitable ventures, and families chose locations to establish safe homes and send children to safe schools based on the accuracy and integrity of crime data.

Providing erroneous or incomplete crime data will yield inaccurate information and cause people to make inaccurate conclusions. This can result in ineffective policies, business practices, and

personal decisions. The harm of such inaccuracy may cost billions of dollars in ineffective policy implementation, unprofitable ventures, and loss due to crime.

The following analysis aims to evaluate the increase in crime volume reported by law enforcement agencies when using NIBRS data specifications, rather than the SRS. Further, why this change occurs and why it will not be apparent in law enforcement agency crime trends is discussed. In short, when NIBRS data are converted to the SRS for the purpose of trending, the hierarchy rule is reapplied. In spite of reporting more data, agencies do not experience an increase in crime when changing from the SRS to NIBRS reporting specifications.

To achieve the goal of evaluating the change in crime data that law enforcement agencies may experience, this study simply compares the difference in crime volume and computes the percentage difference in crime volume due to the hierarchy rule. The analysis was conducted at the national level and is used as a reasonable estimate of how changing from an SRS reporting agency to a NIBRS reporting agency affects the amount of crime submitted to the FBI's UCR Program. NIBRS data for 2014 was used to determine this effect. Law enforcement agencies reporting at least one Group A offense occurring in 2014 were represented.¹

History: UCRs Evolution from a Socioeconomic Indicator to a Means of Transparency

These seven crimes were established in 1930 and are the nation's premier indicator of the nature of crime in the United States: murder, rape, robbery, aggravated assault, burglary, motor vehicle theft, and larceny. Together, these seven offenses were called Crime Index offenses because they were *indicators* illustrating the extent to which crime was increasing or decreasing in the United States. Since the collection and reporting of data was a completely manual process—meaning there were no computers to help account for the number of crimes occurring in the nation—the Crime Index offenses were used to determine the general level of crime in the nation. Since, in essence, these seven crimes represented nearly all types of crime, no other types of crime needed to be collected. Moreover, it also would not have been feasible to collect/report each and every crime with the manually intensive methods of collecting data in the 1930s. (An eighth index crime, arson, was added in 1979. The term [Crime Index was discontinued](#) in 2003 and the eight offenses are since referred to as Part I crimes. The ninth and tenth Part I crimes, human trafficking—commercial sex acts and human trafficking—involuntary servitude, were added in 2013.)

Computers had begun automating manual processes for UCR in 1960 which allowed for collecting more disaggregated data. By 1984, the nation was entering the information age, and technology allowed for the collection of greater amounts of crime data. NIBRS was created to

¹ The data file used to create this report was generated on 7/7/2015. Agencies are allowed to report 2014 NIBRS data until December 2015. It is assumed the majority of law enforcement agencies already reported NIBRS data for 2014, though there may be slight differences in results from NIBRS data files created after 7/7/2015 should the data be used to replicate this study. The conclusions derived from such findings are assumed to not be significantly different from the findings presented in this study.

take advantage of technological advances in order to meet the need for a more detailed crime data collection format. Rather than focus on aggregate totals inferring crime rate changes, the NIBRS collects an *accounting* of information on incidents of crime within an agency and geographic location. After all, data must reflect the true phenomenon that has taken place at a particular time and location.

To meet the public's need for accounting crime incidents, the NIBRS expanded the eight SRS offenses to 49 Group A offenses with data about victims, offenders, property, and arrests being collected along with elements for each offense. NIBRS also included arrest-only information collected for an additional 10 Group B offenses.²

By the new millennium, the concept of a Crime Index, which provided a total crime count based on the seven original SRS offenses, was challenged. The FBI's UCR Program began to question the validity of comparing crime rates based on the combined total count of the seven Crime Index offenses to represent an agency's overall level of criminality. For example, the Crime Index equally weighted a murder and a burglary. Therefore, a town recording two murders appeared to have the same level of crime as a town reporting two burglaries. As mentioned earlier in this article, this imprecise representation of crime levels was removed from the UCR vernacular in 2003.

The public's need for expanded victim information was realized around this same time. In 2001, the FBI UCR Program received requests to expand the definition of rape to include male victims (the legacy definition only included female victims) and victims of sodomy and sexual assault with objects. NIBRS, however, already contained this more inclusive definition of rape.

In 2014, several changes were made in NIBRS: data collection was expanded to collect data on cargo theft, new hate crime categories were added, the race category of Asian/Pacific Islander was separated into two distinct race categories, two human trafficking categories were added, an offense for purchasing prostitution was added, and a law enforcement victim type was added.

To meet the public's expanding needs for crime data, the following efforts are underway to enhance NIBRS:

- A partnership with the National Academy of Science and the Bureau of Justice Statistics (BJS) will modernize the nation's crime statistics.
- The National Crime Statistics Exchange Project, in partnership with BJS, aims to provide a valid and reliable sample of crime data used to develop national NIBRS crime estimates.
- The FBI UCR Program plans to transition to a NIBRS-only reporting system.

² An eleventh Group B offense, runaways, was dropped in 2011 as it is not technically a criminal offense. Runaway offenses are still collected in UCR databases as agencies may still report runaways, but it is not required and is no longer published in UCR data releases.

NIBRS data has been used in recent years to provide more transparency in law enforcement. NIBRS data can be very useful to agencies in this regard because, unlike SRS data, the public is able to examine a jurisdiction's detailed crime data. Since most records management software will report NIBRS data in an automated fashion, the public can be sure agencies are not reporting false crime numbers to make their crime rate appear to decrease when it has not. In effect, NIBRS data provides tamper-proof transparency for law enforcement agencies, which has a positive impact on law enforcement public relations.

The following are the current NIBRS record descriptions. They are indicative of the UCR Program's evolution from an indicator-based system in the 1930s, to a technological accounting-based and victim-focused system via NIBRS. (These descriptions are likely to change in the future as the need for different, better, and more detailed crime data grows; as technology capacity increases; and as the familiarity with its use makes data collection and analysis easier.)

NIBRS Segments

- Incident Information
 - Incident Date
 - Incident Hour
 - Exceptional Clearance
 - Exceptional Clearance Date
- Offense Information
 - Offense Codes
 - Attempted vs. Completed
 - Offender Suspected Use (of alcohol, drug, or computers)
 - Location
 - Type and Number of Premises Entered
 - Type of Criminal Activity
 - Weapon/Force Used
 - Bias Motivation
- Property Information
 - Loss Type
 - Property Description
 - Value of Property
 - Date Recovered

- Number of Motor Vehicles Stolen/Recovered
- Drug Types and Amounts
- Victim Information
 - Connection to Offenses
 - Type of Victim
 - Age/Sex/Race/Ethnicity/Resident Status of Victim
 - Assault and Homicide Circumstances
 - Injury Types
 - Relationships to Offenders
- Offender Information
 - Age/Sex/Race/Ethnicity³ of Offender
- Arrestee Information
 - Arrest Date
 - Type of Arrest
 - Arrest Offense Code

Statutory Rape (36B)

Stolen Property Offenses (Receiving, etc.) (280)

Weapon Law Violations (520)

Group B Offenses⁶—The following offenses are reported in Group B Arrest Reports. They include all offenses that are not Group A offenses. Group B offenses are reported using the following 10 crime categories:

1. Bad Checks (90A)
2. Curfew/Loitering/Vagrancy Violations (90B)
3. Disorderly Conduct (90C)
4. Driving Under the Influence (90D)
5. Drunkenness (90E)
6. Family Offenses, Nonviolent (90F)
7. Liquor Law Violations (90G)
8. Peeping Tom (90H)
9. Trespass of Real Property (90J)
10. All Other Offenses (90Z)

Participation

In 1991, NIBRS' first year, 663 law enforcement agencies converted from the SRS and provided crime data to the FBI in the new, highly-disaggregated NIBRS format. Twenty-five years later, more than 6,299 agencies actively participated in the NIBRS data collection. Those agencies submitted more than 76 million incidents involving Group A offenses and nearly 26 million incidents involving Group B offenses (See Table 1 and Figure 1).

⁶ An 11th category, Runaway, was discontinued in 2010.

Table 1: NIBRS ORIs, Incidents Involving Group A Offenses, and Group B Offenses by Year⁷

Year	ORIs	Group A	Group B	Year	ORIs	Group A	Group B
1991	663	582,369	227,485	2003	4,344	3,597,576	1,154,498
1992	990	760,509	266,438	2004	4,648	4,036,881	1,296,557
1993	1,474	876,646	332,714	2005	4,791	4,561,703	1,457,435
1994	1,553	894,350	345,323	2006	4,947	4,847,671	1,540,038
1995	1,307	836,846	318,524	2007	5,062	4,945,692	1,588,734
1996	1,530	1,063,339	387,663	2008	5,290	4,959,971	1,648,144
1997	1,961	1,460,136	541,424	2009	5,695	4,992,094	1,746,930
1998	2,449	1,822,384	711,548	2010	5,744	4,998,914	1,753,973
1999	2,924	2,136,872	830,071	2011	5,929	5,020,791	1,720,606
2000	3,063	2,616,248	937,668	2012	6,004	5,001,060	1,713,703
2001	3,662	3,232,081	1,044,178	2013	6,178	4,927,535	1,667,350
2002	3,923	3,418,648	1,126,216	2014	6,299	4,759,438	1,565,192
				Total		76,349,754	25,922,412

Figure 1: Number of ORIs Reporting NIBRS Records by Year, 1991-2014⁷

⁷ Totals for agencies and reports for 2014 may change because records may be submitted to the FBI until December 2015. (Please see footnote 1.) The number does not include zero reporting agencies which are active but report no crime.

The Hierarchy Rule in Depth

In the SRS, offenses are ranked in terms of severity, and only the highest-ranked offense is reported in incidents which have multiple offense types. The exceptions are the offenses of Arson and Human Trafficking. These offenses do not follow the Hierarchy Rule in that they are *always* reported. SRS offenses are reported in the following order:

- I. Murder and Nonnegligent Manslaughter (abbreviated to Murder)
- II. Rape⁸
- III. Robbery
- IV. Aggravated Assault
- V. Burglary
- VI. Larceny
- VII. Motor Vehicle Theft
- VIII. Arson (always reported, does not follow the Hierarchy Rule)
- IX. Human Trafficking – Commercial Sex Acts (always reported, does not follow the Hierarchy Rule)
- X. Human Trafficking – Involuntary Servitude (always reported, does not follow the Hierarchy Rule)

According to the Hierarchy Rule, murder, human trafficking, and arson are always counted in the SRS, however the other six Part I crimes are not always reported in multiple-offense incidents. If, for example, a murder and rape occur within the same incident, only the murder is counted in the SRS. Further, if an aggravated assault occurs in the same incident as a burglary, the burglary is not counted.

There are also a few considerations which are true to both NIBRS and the SRS. For example, aggravated assault is always inherent to robbery, so only a robbery is counted when both occur in the same incident.⁹ Similarly, larceny is not reported with burglary as it is inherent to the crime.¹⁰ NIBRS, however, would capture each crime mentioned above. Up to ten offenses of the 49 offenses reported in NIBRS can be listed in an incident's offense segments.

Table 2 shows the number of NIBRS offenses that are removed from crime counts when the data are converted to the SRS. As murder is at the top of the hierarchy, there is no reduction in the number of murder offenses when converting from NIBRS to the SRS. However, there were 12

⁸ In 2011, the FBI's CJIS Advisory Policy Board changed the definition of Rape in the SRS to include male victims, sodomy, and sexual assault with objects. The change was approved by the FBI Director and implemented starting with the 2013 UCR data collections. NIBRS always collected information for these sex offense. The expanded definition of rape was used in this study.

⁹ The exception in NIBRS would be if there were multiple victims in an incident and some were not robbed, but all were victims of aggravated assault.

¹⁰ The exception in NIBRS would be if offenders committed larceny offenses outside of a structure after committing burglary offenses within the same incident.

rape victims involved in incidents where murder was also involved. Similarly, for 4,458 NIBRS burglaries, there was a murder, a rape, a robbery, or an aggravated assault which happened in the same incident. The 12 rapes and 4,458 burglaries would not be counted in the UCR SRS data collection due to conditions established by the Hierarchy Rule.

Nationally, there is a minimal percentage increase (less than 0.04%) in crime volume for rape when law enforcement agencies move from the SRS to NIBRS. Robbery increased by little more than one-half of one percent (0.6%), aggravated assault and burglary each increased by 1.0 percent, larceny increased by 2.6 percent, and motor vehicle theft increased by 2.7 percent.

Table 2: Percent Increases in Crime Volume by Removing the Hierarchy Rule

	Incidents	Offenses	Reduction to Hierarchy	Percent Increase
Murder ¹¹	3,418	3,650	0	-
Rape ¹¹	36,035	37,635	12	0.0
Robbery	75,581	75,581	382	0.6
Aggravated Assault ¹¹	167,992	203,740	1,154	0.6
Burglary ¹²	570,470	570,470	4,458	1.0
Larceny ¹³	1,666,327	1,666,327	43,248	2.6
Motor Vehicle Theft	162,652	162,652	4,689	2.7
Totals	2,682,475	2,720,055	53,743	2.1

The concern of many law enforcement agency officials is that the inclusion of these crimes, particularly property crimes, will appear as an increase in crime when switching from SRS reporting to NIBRS reporting. As previously discussed, the apparent increase is simply due to the difference between how crimes are counted in NIBRS versus the SRS and its application of the Hierarchy Rule. Further, none of the increases amount to a change greater than 2.7 percent.

No Need for Apprehension

Any increases in crime volume due to the ability to report multiple offenses in the NIBRS are eliminated when trending. For trends, NIBRS data are converted to SRS data and the Hierarchy Rule is again applied. This reduces crime counts in multiple-offense incidents to what would

¹¹ The number of offenses differs from the number of incidents for murder, rape, and aggravated assault because these Crimes Against Persons offense categories count one offense for each victim in the incident. Robbery, burglary, and motor vehicle theft are considered Crimes Against Property and count only one offense per incident.

¹² The Hotel Rule (see the *SRS Users Manual* at <https://www.fbi.gov/about-us/cjis/ucr/nibrs/summary-reporting-system-srs-user-manual>, pp 43 for explanation) and number of premises entered were not considered for burglary offense totals.

¹³ NIBRS allows for the reporting of eight different types of larceny offenses per offense. Incidents with more than one larceny offense type reported were aggregated to only count one larceny per offense to simulate how this would be reported in the SRS.

have been reported if the agency was only reporting according to SRS specifications. When the FBI UCR Program starts trending NIBRS data, comparisons to pre-NIBRS data submissions would not be included in trends.

Reporting NIBRS data does not actually increase crime within jurisdictions, even though there is a slight, but visible, effect on crime rates. As shown in Table 3, approximately one in ten of NIBRS incidents have multiple offenses (10.6%), and only 1 percent (1.1%) of NIBRS incidents have multiple offenses affected by the Hierarchy Rule. NIBRS shows a small (2.1%) percentage increase from the SRS in crime volume which is easily explained by the allowance of reporting incidents with multiple offenses and the absence of the Hierarchy Rule.

Table 3: Number of Offenses per Incident, 2014

Offenses	Frequency	Percent	Cumulative Percent
1	4,253,081	89.4	89.4
2	457,479	9.6	99.0
3	43,304	0.9	99.9
4	4,778	0.1	100.0
5	688	-	100.0
6	93	-	100.0
7	14	-	100.0
8	1	-	100.0
Total	4,759,438	100.0	100.0

Conclusion

The elimination of the SRS has been discussed for some time in UCR governance meetings. In several speeches in 2015, FBI Director James B. Comey called for “more and better data related to those we arrest, those we confront for breaking the law and jeopardizing public safety, and those who confront us.” The CJIS Advisory Policy Board (a joint group of law enforcement executives, academics, and data analysts who are stakeholders in the UCR Program) the International Association of Chiefs of Police, the National Sheriffs’ Association, Major City Chiefs Association, Major County Sheriffs’ Association have all pledged their support for that call. The result of this dialogue and agreement is the FBI and its partners undertaking the cessation of SRS reporting and the across-the-board implementation of NIBRS.

When this change is eventually made, a similar 2.1 percent increase in the number of reported crimes should be expected for agencies transitioning from SRS to NIBRS data. One strategy to ease this perceived uptick in crime is that agencies can provide a side-by-side comparison of their NIBRS data with a few years of NIBRS data that has been converted to SRS data and

demonstrate what the trend of crime rates would look like if the agency was still only reporting in the SRS. The converted data could help soften and explain the *appearance* of increased crime while lending even more transparency to the agency's crime reporting to the public.

Law enforcement agency officials can use this study to demonstrate how changing from SRS reporting to NIBRS reporting might affect their local crime counts. It is accepted that incident-based data collections will have more robust and accurate crime counts over traditional tally-based systems like the SRS. Any reports law enforcement agencies generate can show how the elimination of the Hierarchy Rule has affected the agency's data by trending and comparing data prior to the law enforcement agency's conversion to the NIBRS.

Above all, law enforcement agencies are engaged in partnerships with their communities to maximize public safety. Inaccurate information concerning crime in these communities and the nation may cause enormous social costs and waste of public and private resources. Effective policies must be enacted based on relevant and accurate information provided through NIBRS in order to meet the goal of maximizing public safety.

Though NIBRS adds a level of complexity, as well as initial costs to agencies, there is greater value for agencies who transition from the incomplete story of crime told through the antiquated SRS data to a more accurate, transparent, and complete story of crime articulated through NIBRS.

TO: State Uniform Crime Reporting (UCR) Program Managers

RE: The FBI's Transition to a National Incident-Based Reporting System (NIBRS)-Only Data Collection

Recent events across the nation have underscored the importance of having informed conversations about policing and crime policy. The FBI has a longstanding tradition of collecting and providing crime statistics for transparency and accountability in policing through its UCR Program. But we need to get better.

After careful consideration, the FBI will discontinue its Summary Reporting System (SRS) for crime statistics and fully transition the UCR Program to the data-rich NIBRS data collection. On February 9, 2016, I concurred with the following Criminal Justice Information Services (CJIS) Advisory Policy Board (APB) recommendation:

“The FBI UCR Program will transition to a NIBRS-only data collection by January 1, 2021, and will evaluate the probability of achieving that goal on an annual basis. Federal, state, local, and tribal agencies unable to meet the five year transition and who have committed to transitioning to NIBRS will collaborate with the FBI CJIS to develop a transition plan and timeline for conversion.”

This transition is supported by the CJIS APB, the International Association of Chiefs of Police, Major Cities Chiefs Association, Major County Sheriffs' Association, and the National Sheriffs' Association, as well as the Executive Branch of our government.

Transitioning to a NIBRS-only data collection will happen over the next five years. Once complete, the FBI will have faster access to more robust data that is necessary to show how safe our communities are and to help law enforcement and municipal leaders better allocate resources to prevent and combat crime. Through the NIBRS, law enforcement agencies can be more transparent and accountable to the communities they serve.

To: State Uniform Crime Reporting (UCR) Program Managers
Re: The FBI's Transition to a National Incident-Based
Reporting System (NIBRS)-Only Data Collection

Already, 31 percent of participating agencies report their UCR statistics via the NIBRS. In the last few years, the FBI and the Bureau of Justice Statistics have worked to increase the number of NIBRS participants through the National Crime Statistics Exchange (NCS-X) initiative. Currently, the FBI and the NCS-X team are working with local and state agencies as well as other law enforcement organizations across the country to improve the way crime data is reported. The FBI understands this transition comes with a financial burden and is committed to helping state UCR Programs and the 400 agencies identified through the NCS-X initiative to obtain necessary resources to transition to NIBRS.

NIBRS is the pathway to richer crime statistics that can improve our ability to address the important issues we face today. As we move forward, the transition from the SRS to the NIBRS is crucial to our success in providing better, more meaningful national crime data. I'm grateful for your help.

Sincerely yours,

James B. Comey
Director

	B	C	D	E
1	Agency: Florida Department of Law Enforcement		Project: Florida Incident-Based Reporting System	
3	Section 1 -- Strategic Area			
4	#	Criteria	Values	Answer
5	1.01	Are project objectives clearly aligned with the agency's legal mission?	0% to 40% -- Few or no objectives aligned	81% to 100% -- All or nearly all objectives aligned
6			41% to 80% -- Some objectives aligned	
7			81% to 100% -- All or nearly all objectives aligned	
8	1.02	Are project objectives clearly documented and understood by all stakeholder groups?	Not documented or agreed to by stakeholders	Documented with sign-off by stakeholders
9			Informal agreement by stakeholders	
10			Documented with sign-off by stakeholders	
11	1.03	Are the project sponsor, senior management, and other executive stakeholders actively involved in meetings for the review and success of the project?	Not or rarely involved	Project charter signed by executive sponsor and executive team actively engaged in steering committee meetings
12			Most regularly attend executive steering committee meetings	
13			Project charter signed by executive sponsor and executive team actively engaged in steering committee meetings	
14	1.04	Has the agency documented its vision for how changes to the proposed technology will improve its business processes?	Vision is not documented	Vision is partially documented
15			Vision is partially documented	
16			Vision is completely documented	
17	1.05	Have all project business/program area requirements, assumptions, constraints, and priorities been defined and documented?	0% to 40% -- Few or none defined and documented	81% to 100% -- All or nearly all defined and documented
18			41% to 80% -- Some defined and documented	
19			81% to 100% -- All or nearly all defined and documented	
20	1.06	Are all needed changes in law, rule, or policy identified and documented?	No changes needed	No changes needed
21			Changes unknown	
22			Changes are identified in concept only	
23			Changes are identified and documented	
24			Legislation or proposed rule change is drafted	
25	1.07	Are any project phase or milestone completion dates fixed by outside factors, e.g., state or federal law or funding restrictions?	Few or none	All or nearly all
26			Some	
27			All or nearly all	
28	1.08	What is the external (e.g. public) visibility of the proposed system or project?	Minimal or no external use or visibility	Extensive external use or visibility
29			Moderate external use or visibility	
30			Extensive external use or visibility	
31	1.09	What is the internal (e.g. state agency) visibility of the proposed system or project?	Multiple agency or state enterprise visibility	Multiple agency or state enterprise visibility
32			Single agency-wide use or visibility	
33			Use or visibility at division and/or bureau level only	
34	1.10	Is this a multi-year project?	Greater than 5 years	Between 3 and 5 years
35			Between 3 and 5 years	
36			Between 1 and 3 years	
37			1 year or less	

	B	C	D	E
1	Agency: Florida Department of Law Enforcement		Project: Florida Incident-Based Reporting System	
3	Section 2 -- Technology Area			
4	#	Criteria	Values	Answer
5	2.01	Does the agency have experience working with, operating, and supporting the proposed technical solution in a production environment?	Read about only or attended conference and/or vendor presentation	Supported prototype or production system less than 6 months
6			Supported prototype or production system less than 6 months	
7			Supported production system 6 months to 12 months	
8			Supported production system 1 year to 3 years	
9			Installed and supported production system more than 3 years	
10	2.02	Does the agency's internal staff have sufficient knowledge of the proposed technical solution to implement and operate the new system?	External technical resources will be needed for implementation and operations	External technical resources will be needed for implementation and operations
11			External technical resources will be needed through implementation only	
12			Internal resources have sufficient knowledge for implementation and operations	
13	2.03	Have all relevant technical alternatives/ solution options been researched, documented and considered?	No technology alternatives researched	Some alternatives documented and considered
14			Some alternatives documented and considered	
15			All or nearly all alternatives documented and considered	
16	2.04	Does the proposed technical solution comply with all relevant agency, statewide, or industry technology standards?	No relevant standards have been identified or incorporated into proposed technology	Proposed technology solution is fully compliant with all relevant agency, statewide, or industry standards
17			Some relevant standards have been incorporated into the proposed technology	
18			Proposed technology solution is fully compliant with all relevant agency, statewide, or industry standards	
19	2.05	Does the proposed technical solution require significant change to the agency's existing technology infrastructure?	Minor or no infrastructure change required	Minor or no infrastructure change required
20			Moderate infrastructure change required	
21			Extensive infrastructure change required	
22			Complete infrastructure replacement	
23	2.06	Are detailed hardware and software capacity requirements defined and documented?	Capacity requirements are not understood or defined	Capacity requirements are based on historical data and new system design specifications and performance requirements
24			Capacity requirements are defined only at a conceptual level	
25			Capacity requirements are based on historical data and new system design specifications and performance requirements	

	B	C	D	E
1	Agency: Florida Department of Law Enforcement		Project: Florida Incident-Based Reporting System	
3	Section 3 -- Organizational Change Management Area			
4	#	Criteria	Values	Answer
5	3.01	What is the expected level of organizational change that will be imposed within the agency if the project is successfully implemented?	Extensive changes to organization structure, staff or business processes	Minimal changes to organization structure, staff or business processes structure
6			Moderate changes to organization structure, staff or business processes	
7			Minimal changes to organization structure, staff or business processes structure	
8	3.02	Will this project impact essential business processes?	Yes	No
9			No	
10	3.03	Have all business process changes and process interactions been defined and documented?	0% to 40% -- Few or no process changes defined and documented	41% to 80% -- Some process changes defined and documented
11			41% to 80% -- Some process changes defined and documented	
12			81% to 100% -- All or nearly all processes defined and documented	
13	3.04	Has an Organizational Change Management Plan been approved for this project?	Yes	Yes
14			No	
15	3.05	Will the agency's anticipated FTE count change as a result of implementing the project?	Over 10% FTE count change	Less than 1% FTE count change
16			1% to 10% FTE count change	
17			Less than 1% FTE count change	
18	3.06	Will the number of contractors change as a result of implementing the project?	Over 10% contractor count change	Less than 1% contractor count change
19			1 to 10% contractor count change	
20			Less than 1% contractor count change	
21	3.07	What is the expected level of change impact on the citizens of the State of Florida if the project is successfully implemented?	Extensive change or new way of providing/receiving services or information)	Extensive change or new way of providing/receiving services or information)
22			Moderate changes	
23			Minor or no changes	
24	3.08	What is the expected change impact on other state or local government agencies as a result of implementing the project?	Extensive change or new way of providing/receiving services or information	Extensive change or new way of providing/receiving services or information
25			Moderate changes	
26			Minor or no changes	
27	3.09	Has the agency successfully completed a project with similar organizational change requirements?	No experience/Not recently (>5 Years)	Recently completed project with greater change requirements
28			Recently completed project with fewer change requirements	
29			Recently completed project with similar change requirements	
30			Recently completed project with greater change requirements	

	B	C	D	E
1	Agency: Agency Name		Project: Project Name	
3	Section 4 -- Communication Area			
4	#	Criteria	Value Options	Answer
5	4.01	Has a documented Communication Plan been approved for this project?	Yes	Yes
6			No	
7	4.02	Does the project Communication Plan promote the collection and use of feedback from management, project team, and business stakeholders (including end users)?	Negligible or no feedback in Plan	Routine feedback in Plan
8			Routine feedback in Plan	
9			Proactive use of feedback in Plan	
10	4.03	Have all required communication channels been identified and documented in the Communication Plan?	Yes	Yes
11			No	
12	4.04	Are all affected stakeholders included in the Communication Plan?	Yes	Yes
13			No	
14	4.05	Have all key messages been developed and documented in the Communication Plan?	Plan does not include key messages	Some key messages have been developed
15			Some key messages have been developed	
16			All or nearly all messages are documented	
17	4.06	Have desired message outcomes and success measures been identified in the Communication Plan?	Plan does not include desired messages outcomes and success measures	Plan does not include desired messages outcomes and success measures
18			Success measures have been developed for some messages	
19			All or nearly all messages have success measures	
20	4.07	Does the project Communication Plan identify and assign needed staff and resources?	Yes	Yes
21			No	

	B	C	D	E
1		Agency: Florida Department of Law Enforcement	Project: Florida Incident-Based Reporting System	
3		Section 5 -- Fiscal Area		
4	#	Criteria	Values	Answer
5	5.01	Has a documented Spending Plan been approved for the entire project lifecycle?	Yes	No
6			No	
7	5.02	Have all project expenditures been identified in the Spending Plan?	0% to 40% -- None or few defined and documented	81% to 100% -- All or nearly all defined and documented
8			41% to 80% -- Some defined and documented	
9			81% to 100% -- All or nearly all defined and documented	
10	5.03	What is the estimated total cost of this project over its entire lifecycle?	Unknown	Greater than \$10 M
11			Greater than \$10 M	
12			Between \$2 M and \$10 M	
13			Between \$500K and \$1,999,999	
14		Less than \$500 K		
15	5.04	Is the cost estimate for this project based on quantitative analysis using a standards-based estimation model?	Yes	No
16			No	
17	5.05	What is the character of the cost estimates for this project?	Detailed and rigorous (accurate within ±10%)	Order of magnitude – estimate could vary between 10-100%
18			Order of magnitude – estimate could vary between 10-100%	
19			Placeholder – actual cost may exceed estimate by more than 100%	
20	5.06	Are funds available within existing agency resources to complete this project?	Yes	No
21			No	
22	5.07	Will/should multiple state or local agencies help fund this project or system?	Funding from single agency	Funding from other state agencies
23			Funding from local government agencies	
24			Funding from other state agencies	
25	5.08	If federal financial participation is anticipated as a source of funding, has federal approval been requested and received?	Neither requested nor received	Requested and received
26			Requested but not received	
27			Requested and received	
28			Not applicable	
29	5.09	Have all tangible and intangible benefits been identified and validated as reliable and achievable?	Project benefits have not been identified or validated	Most project benefits have been identified but not validated
30			Some project benefits have been identified but not validated	
31			Most project benefits have been identified but not validated	
32			All or nearly all project benefits have been identified and validated	
33	5.10	What is the benefit payback period that is defined and documented?	Within 1 year	No payback
34			Within 3 years	
35			Within 5 years	
36			More than 5 years	
37			No payback	
38	5.11	Has the project procurement strategy been clearly determined and agreed to by affected stakeholders?	Procurement strategy has not been identified and documented	Stakeholders have reviewed and approved the proposed procurement strategy
39			Stakeholders have not been consulted re: procurement strategy	
40			Stakeholders have reviewed and approved the proposed procurement strategy	
41	5.12	What is the planned approach for acquiring necessary products and solution services to successfully complete the project?	Time and Expense (T&E)	Combination FFP and T&E
42			Firm Fixed Price (FFP)	
43			Combination FFP and T&E	
44	5.13	What is the planned approach for procuring hardware and software for the project?	Timing of major hardware and software purchases has not yet been determined	Just-in-time purchasing of hardware and software is documented in the project schedule
45			Purchase all hardware and software at start of project to take advantage of one-time discounts	
46			Just-in-time purchasing of hardware and software is documented in the project schedule	
47	5.14	Has a contract manager been assigned to this project?	No contract manager assigned	Contract manager assigned is not the procurement manager or the project manager
48			Contract manager is the procurement manager	
49			Contract manager is the project manager	
50			Contract manager assigned is not the procurement manager or the project manager	
51	5.15	Has equipment leasing been considered for the project's large-scale computing purchases?	Yes	Yes
52			No	
53	5.16	Have all procurement selection criteria and outcomes been clearly identified?	No selection criteria or outcomes have been identified	Some selection criteria and outcomes have been defined and documented
54			Some selection criteria and outcomes have been defined and documented	
55			All or nearly all selection criteria and expected outcomes have been defined and documented	
56	5.17	Does the procurement strategy use a multi-stage evaluation process to progressively narrow the field of prospective vendors to the single, best qualified candidate?	Procurement strategy has not been developed	Multi-stage evaluation and proof of concept or prototype planned/used to select best qualified vendor
57			Multi-stage evaluation not planned/used for procurement	
58			Multi-stage evaluation and proof of concept or prototype planned/used to select best qualified vendor	
59	5.18	For projects with total cost exceeding \$10 million, did/will the procurement strategy require a proof of concept or prototype as part of the bid response?	Procurement strategy has not been developed	Yes, bid response did/will include proof of concept or prototype
60			No, bid response did/will not require proof of concept or prototype	
61			Yes, bid response did/will include proof of concept or prototype	
62			Not applicable	

	B	C	D	E
1	Agency: Florida Department of Law Enforcement		Project: Florida Incident-Based Reporting System	
3	Section 6 -- Project Organization Area			
4	#	Criteria	Values	Answer
5	6.01	Is the project organization and governance structure clearly defined and documented within an approved project plan?	Yes	Yes
6			No	
7	6.02	Have all roles and responsibilities for the executive steering committee been clearly identified?	None or few have been defined and documented	All or nearly all have been defined and documented
8			Some have been defined and documented	
9			All or nearly all have been defined and documented	
10	6.03	Who is responsible for integrating project deliverables into the final solution?	Not yet determined	System Integrator (contractor)
11			Agency	
12			System Integrator (contractor)	
13	6.04	How many project managers and project directors will be responsible for managing the project?	3 or more	3 or more
14			2	
15			1	
16	6.05	Has a project staffing plan specifying the number of required resources (including project team, program staff, and contractors) and their corresponding roles, responsibilities and needed skill levels been developed?	Needed staff and skills have not been identified	Some or most staff roles and responsibilities and needed skills have been identified
17			Some or most staff roles and responsibilities and needed skills have been identified	
18			Staffing plan identifying all staff roles, responsibilities, and skill levels have been documented	
19	6.06	Is an experienced project manager dedicated fulltime to the project?	No experienced project manager assigned	Yes, experienced project manager dedicated full-time, 100% to project
20			No, project manager is assigned 50% or less to project	
21			No, project manager assigned more than half-time, but less than full-time to project	
22			Yes, experienced project manager dedicated full-time, 100% to project	
23	6.07	Are qualified project management team members dedicated full-time to the project	None	Yes, business, functional or technical experts dedicated full-time, 100% to project
24			No, business, functional or technical experts dedicated 50% or less to project	
25			No, business, functional or technical experts dedicated more than half-time but less than full-time to project	
26			Yes, business, functional or technical experts dedicated full-time, 100% to project	
27	6.08	Does the agency have the necessary knowledge, skills, and abilities to staff the project team with in-house resources?	Few or no staff from in-house resources	Half of staff from in-house resources
28			Half of staff from in-house resources	
29			Mostly staffed from in-house resources	
30			Completely staffed from in-house resources	
31	6.09	Is agency IT personnel turnover expected to significantly impact this project?	Minimal or no impact	Minimal or no impact
32			Moderate impact	
33			Extensive impact	
34	6.10	Does the project governance structure establish a formal change review and control board to address proposed changes in project scope, schedule, or cost?	Yes	Yes
35			No	
36	6.11	Are all affected stakeholders represented by functional manager on the change review and control board?	No board has been established	No, all stakeholders are not represented on the board
37			No, only IT staff are on change review and control board	
38			No, all stakeholders are not represented on the board	
39			Yes, all stakeholders are represented by functional manager	

	B	C	D	E
1	Agency: Florida Department of Law Enforcement		Project: Florida Incident-Based Reporting System	
3	Section 7 -- Project Management Area			
4	#	Criteria	Values	Answer
5	7.01	Does the project management team use a standard commercially available project management methodology to plan, implement, and control the project?	No	Yes
6			Project Management team will use the methodology selected by the systems integrator	
7			Yes	
8	7.02	For how many projects has the agency successfully used the selected project management methodology?	None	More than 3
9			1-3	
10			More than 3	
11	7.03	How many members of the project team are proficient in the use of the selected project management methodology?	None	Some
12			Some	
13			All or nearly all	
14	7.04	Have all requirements specifications been unambiguously defined and documented?	0% to 40% -- None or few have been defined and documented	81% to 100% -- All or nearly all have been defined and documented
15			41 to 80% -- Some have been defined and documented	
16			81% to 100% -- All or nearly all have been defined and documented	
17	7.05	Have all design specifications been unambiguously defined and documented?	0% to 40% -- None or few have been defined and documented	81% to 100% -- All or nearly all have been defined and documented
18			41 to 80% -- Some have been defined and documented	
19			81% to 100% -- All or nearly all have been defined and documented	
20	7.06	Are all requirements and design specifications traceable to specific business rules?	0% to 40% -- None or few are traceable	81% to 100% -- All or nearly all requirements and specifications are traceable
21			41 to 80% -- Some are traceable	
22			81% to 100% -- All or nearly all requirements and specifications are traceable	
23	7.07	Have all project deliverables/services and acceptance criteria been clearly defined and documented?	None or few have been defined and documented	All or nearly all deliverables and acceptance criteria have been defined and documented
24			Some deliverables and acceptance criteria have been defined and documented	
25			All or nearly all deliverables and acceptance criteria have been defined and documented	
26	7.08	Is written approval required from executive sponsor, business stakeholders, and project manager for review and sign-off of major project deliverables?	No sign-off required	Review and sign-off from the executive sponsor, business stakeholder, and project manager are required on all major project deliverables
27			Only project manager signs-off	
28			Review and sign-off from the executive sponsor, business stakeholder, and project manager are required on all major project deliverables	
29	7.09	Has the Work Breakdown Structure (WBS) been defined to the work package level for all project activities?	0% to 40% -- None or few have been defined to the work package level	41 to 80% -- Some have been defined to the work package level
30			41 to 80% -- Some have been defined to the work package level	
31			81% to 100% -- All or nearly all have been defined to the work package level	
32	7.10	Has a documented project schedule been approved for the entire project lifecycle?	Yes	No
33			No	
34	7.11	Does the project schedule specify all project tasks, go/no-go decision points (checkpoints), critical milestones, and resources?	Yes	No
35			No	
36	7.12	Are formal project status reporting processes documented and in place to manage and control this project?	No or informal processes are used for status reporting	Project team and executive steering committee use formal status reporting processes
37			Project team uses formal processes	
38			Project team and executive steering committee use formal status reporting processes	
39	7.13	Are all necessary planning and reporting templates, e.g., work plans, status reports, issues and risk management, available?	No templates are available	All planning and reporting templates are available
40			Some templates are available	
41			All planning and reporting templates are available	
42	7.14	Has a documented Risk Management Plan been approved for this project?	Yes	Yes
43			No	
44	7.15	Have all known project risks and corresponding mitigation strategies been identified?	None or few have been defined and documented	All known risks and mitigation strategies have been defined
45			Some have been defined and documented	
46			All known risks and mitigation strategies have been defined	
47	7.16	Are standard change request, review and approval processes documented and in place for this project?	Yes	Yes
48			No	
49	7.17	Are issue reporting and management processes documented and in place for this project?	Yes	Yes
50			No	

	B	C	D	E
1	Agency: Florida Department of Law Enforcement		Project: Florida Incident-Based Reporting System	
2				
3	Section 8 -- Project Complexity Area			
4	#	Criteria	Values	Answer
5	8.01	How complex is the proposed solution compared to the current agency systems?	Unknown at this time	More complex
6			More complex	
7			Similar complexity	
8			Less complex	
9	8.02	Are the business users or end users dispersed across multiple cities, counties, districts, or regions?	Single location	More than 3 sites
10			3 sites or fewer	
11			More than 3 sites	
12	8.03	Are the project team members dispersed across multiple cities, counties, districts, or regions?	Single location	Single location
13			3 sites or fewer	
14			More than 3 sites	
15	8.04	How many external contracting or consulting organizations will this project require?	No external organizations	1 to 3 external organizations
16			1 to 3 external organizations	
17			More than 3 external organizations	
18	8.05	What is the expected project team size?	Greater than 15	5 to 8
19			9 to 15	
20			5 to 8	
21			Less than 5	
22	8.06	How many external entities (e.g., other agencies, community service providers, or local government entities) will be impacted by this project or system?	More than 4	More than 4
23			2 to 4	
24			1	
25			None	
26	8.07	What is the impact of the project on state operations?	Business process change in single division or bureau	Statewide or multiple agency business process change
27			Agency-wide business process change	
28			Statewide or multiple agency business process change	
29	8.08	Has the agency successfully completed a similarly-sized project when acting as Systems Integrator?	Yes	Yes
30			No	
31	8.09	What type of project is this?	Infrastructure upgrade	Implementation requiring software development or purchasing commercial off the shelf (COTS) software
32			Implementation requiring software development or purchasing commercial off the shelf (COTS) software	
33			Business Process Reengineering	
34			Combination of the above	
35	8.10	Has the project manager successfully managed similar projects to completion?	No recent experience	Similar size and complexity
36			Lesser size and complexity	
37			Similar size and complexity	
38			Greater size and complexity	
39	8.11	Does the agency management have experience governing projects of equal or similar size and complexity to successful completion?	No recent experience	Greater size and complexity
40			Lesser size and complexity	
41			Similar size and complexity	
42			Greater size and complexity	

SCHEDULE IV-B FOR CRIMINAL JUSTICE DATA TRANSPARENCY

For Fiscal Year 2021-22

I. Schedule IV-B Cover Sheet

Schedule IV-B Cover Sheet and Agency Project Approval	
Agency: Florida Department of Law Enforcement	Schedule IV-B Submission Date: October 15, 2020
Project Name: Criminal Justice Data Transparency	Is this project included in the Agency's LRPP? ____ Yes <u>X</u> No
FY 2021-22 LBR Issue Code: 36121C0	FY 2021-22 LBR Issue Title: Criminal Justice Data Transparency
Agency Contact for Schedule IV-B (Name, Phone #, and E-mail address): Ebony Tisby, 850-410-8860, ebonytisby@fdle.state.fl.us	
AGENCY APPROVAL SIGNATURES	
I am submitting the attached Schedule IV-B in support of our legislative budget request. I have reviewed the estimated costs and benefits documented in the Schedule IV-B and believe the proposed solution can be delivered within the estimated time for the estimated costs to achieve the described benefits. I agree with the information in the attached Schedule IV-B.	
Agency Head: 	Date: 10/15/2020
Printed Name: Richard Swearingen	
Agency Chief Information Officer (or equivalent): 	Date: 10/15/2020
Printed Name: Joey Hornsby	
Budget Officer: 	Date: 10/14/2020
Printed Name: Cynthia Barr	
Planning Officer: 	Date: 10/14/2020
Printed Name: Sharon Wester	
Project Sponsor: 	Date: 10/14/2020
Printed Name: Charles Schaeffer	
Schedule IV-B Preparers (Name, Phone #, and E-mail address):	
Business Need:	Renee Strickland, 850-410-7100, ReneeStrickland@fdle.state.fl.us
Cost Benefit Analysis:	Danielle Rioux, 850-410-7245, DanielleRioux@fdle.state.fl.us
Risk Analysis:	Ebony Tisby, 850-410-8860, EbonyTisby@fdle.state.fl.us
Technology Planning:	Ebony Tisby, 850-410-8860, EbonyTisby@fdle.state.fl.us
Project Planning:	Ebony Tisby, 850-410-8860, EbonyTisby@fdle.state.fl.us

II. Schedule IV-B Business Case – Strategic Needs Assessment

A. Background and Strategic Needs Assessment

Purpose: To clearly articulate the business-related need(s) for the proposed project

1. Business Need

The Florida Legislature passed Senate Bill 1392 (SB1392) creating s. 900.05 and s. 943.6871, Florida Statutes, during the 2018 Legislative Session. SB1392 took effect on July 1, 2018. This legislation requires contributors to provide criminal justice data and statistics to the Florida Department of Law Enforcement (FDLE) as part of a Criminal Justice Data Transparency (CJDT) initiative. The legislation stipulates specific parameters concerning the data collections and directs FDLE to provide public access to the data. FDLE is responsible for receiving specific data elements from each entity on a monthly basis and making the information publicly available beginning January 1, 2019.

The 2019 Legislative Session, though House Bill (HB) 7125 amended s. 900.05 and s.943.6871, Florida Statutes, addressing the confidentiality of the data received. The contributors required to submit data to FDLE was expanded. The CJDT contributors are the Clerks of Court, state attorneys, public defenders, county detention facilities, Justice Administrative Commission (JAC), criminal regional conflict counsel, and the Florida Department of Corrections.

Some of the required data elements from the Clerks of Court and Florida Department of Corrections are already provided to FDLE through existing courses of business. However, these data elements are for specific purposes and do not meet the standards necessary to fulfill all the requirements of this legislation. The remaining data elements must be clearly defined and methods identified for submission to FDLE for inclusion in the information made publicly accessible.

The data provided by the contributors must be maintained by FDLE in a modern, open, electronic format that is machine-readable and readily accessible through FDLE's website. The data must be available via the internet and must be searchable by data element, county, judicial circuit, or unique identifier. A unique identifier must be created for each criminal case received from the Clerks of Court to identify the person who is the subject of the criminal case and must be the same for all information related to that person at any time. The legislation places limits on the creation of the unique identifier but places the responsibility for linking the data on FDLE.

The combined CJDT and Uniform Arrest Affidavit (UAA) project has been separated for FY 21-22. The requirements of s.943.6871(1) through (9), F.S. are met through CJDT, and a separate budget request. The uniform arrest affidavit as defined in s.943.6871(10), F.S. is in this Schedule IV-B.

2. Business Objectives

To implement the CJDT requirements, FDLE must support the following business objectives:

- Collect specified data at least monthly from the contributors.
- Support data transmissions from contributors through secure channels.
- Meet current Federal Bureau of Investigation (FBI), FDLE, and state security requirements and support updates to security requirements.
- Create a unique identifier for each person who is the subject of the criminal case.
- Maintain the unique identifier across local and state entities for all information related to that person at any time.
- Collect, compile, maintain, and manage the data submitted by contributors and coordinate related activities to make such data comparable, transferable, and readily usable.
- Monitor data collection procedures and test data quality.
- Develop methods for archiving data, retrieving archived data, and data editing and verification.
- Provide administrative reporting for data submissions and analysis purposes.

- Leverage the FIBRS automated data collection of law enforcement employee counts for other contributors.
- Publish data using an internet-based database in a modern, open, electronic format that is machine-readable, readily accessible and searchable through FDLE’s website.
- Ensure published data complies with confidentiality rules.
- Manage state pass through funds to the contributors for implementing the technical requirements.

Upon completion, the public must be able to:

- Have free access to the outlined criminal justice data through FDLE’s public website.
- Search the database, at a minimum, by data element, county, judicial circuit, or unique identifier.
- Download the search results in multiple formats.

B. Baseline Analysis

1. Current Business Process(es)

Purpose: To establish a basis for understanding the business processes, stakeholder groups, and current technologies that will be affected by the project and the level of business transformation that will be required for the project to be successful.

The creation of s. 900.05 and s.943.6871, Florida Statutes directs FDLE to provide new services. FDLE currently has many processes that coordinate data submission from other local and state agencies, data processing, and publication. These data submissions occur for data that enters the repository of computerized criminal history records (CCH), the Uniform Crime Reports (UCR) program, and the Sexual Offender and Predator Registry (SOPR). Current processes are outlined as follows:

CCH

The clerks of court, county detention facilities, and the Florida Department of Corrections provide some of the specified data to FDLE’s CCH files which serve as the State’s criminal history repository. The submitted data updates the criminal history records after passing through rigorous data matching processes to ensure that the data are associated with the correct person’s record. The CCH system has internal quality checks and verifications to ensure data integrity and validity. By statute CCH data is not public, therefore limited summaries of arrest data are currently represented on FDLE’s website. They are displayed as an aggregate trend, presented in a graphical form, and compared to Florida’s UCR incident trends for similar crime types.

UCR

Summary crime data are currently submitted to FDLE by over 400 local and state agencies twice annually for UCR Offenses and Clearances that have occurred for the specified period. Agencies may upload text files into the UCR Input System, or may individually enter data directly into the system. Submissions for seven segments are required, including Arrest, Offense, Property, Weapon, Domestic Violence, Arson, and Motor Vehicles and two segments are optional, including Law Enforcement Officers Killed and Assaulted and Supplemental Homicide Reports. The UCR Input System has internal quality checks and verifications.

Florida compiles, reports, and publishes data semi-annually that display aggregated counts for the semi-annual (January through June) and annual (January through December) reporting cycles. The data is currently summarized by total offense counts by crime type and unique crime type characteristics on annual basis. Arrest totals for each crime are also available with counts by County, Age and Sex, and Judicial Circuit. (FIBRS will replace this reporting.)

SOPR

Florida sexual offenders and predators are required to register quarterly or biannually, based on their registration requirements. FDLE receives data about individuals who have registered as a sexual offender or predator on a daily

basis from over 400 local and state agencies and the Department of Highway Safety and Motor Vehicles. Data are transmitted to FDLE via text file, which is validated and uploaded into the Sexual Offender and Predator Database. Florida's Sexual Offenders and Predators database is freely available and searchable online.

Other Published Data

FDLE has other searchable databases currently available to the public online including the Public Access System (PAS) <http://pas.fdle.state.fl.us/pas/restricted/PAS/home/home.jsf>. In addition, the Florida Department of Corrections offers their searchable Corrections Offender Network to the public online (<http://www.dc.state.fl.us/offendersearch/>).

Other Data Distribution by FDLE

Criminal History Record Checks

A full criminal history may be requested for an individual through FDLE's criminal history record check service and is subject to a fee. These data are not otherwise published or publicly available.

Privacy and Security Agreements

Limited individual criminal history information may be provided under certain restrictions based on s. 943.057, Florida Statutes and Rule 11C-6.005, Florida Administrative Code. Researchers may request criminal history information only for research and statistical purposes as part of a Privacy and Security Agreement with FDLE. These data are limited to as little criminal history information as possible to fulfill the request, and researchers must follow definitive rules to ensure the protection of the data provided. Such requests are subject to a fee.

Public Records Requests

Limited arrest and court information may be provided under certain restrictions based on s. 119, Florida Statutes. Individuals requesting data based on the Public Records law receive aggregated counts from CCH or UCR based on their specific request. Requests are subject to a fee.

2. Assumptions and Constraints

Assumptions

The following assumptions relate to CJDT:

- The accessibility of crime data and statistics is critical to Florida's criminal justice policy makers who analyze criminal justice data and prepare statistical reports to inform the public about the criminal justice process in the State.
- Detailed requirements need to be documented before moving forward with the project.
- The system will comply with state of Florida and FBI Criminal Justice Information Services (CJIS) Security Policy.
- Contributors will make data available in a format supported by the CJDT database.
- FDLE will published data in a modern, open, electronic format that is machine readable and readily accessible on FDLE's website.
- FDLE will create a unique identifier for each person that must be the same for that person in any court case and used across local and state entities for all information related to that person at any time.
- FDLE will disseminate reported criminal justice data.
- Public access to the database will not require a license or fee to receive information.
- To the extent possible, the system will leverage data submitted by other FDLE Criminal Justice Analytics data sources.
- Implementation of a uniform arrest affidavit will improve the quality of the CJDT data.

Constraints

The following constraints relate to CJDT:

- The data required for CJDT include Personally Identifiable Information (PII) and Criminal Justice Information (CJI) which must both be protected and managed according to the FBI CJIS Security Policy in motion and at rest.
- Corresponding data elements submitted by each entity must have agreed-upon definitions for each element.
- Search and display functions of the publicly available data will not exceed capabilities of FDLE's website platform.
- Unique person identifiers are based on demographic data, not biometrics; as such links may change as data modifies.
- Data must be in an electronic format that is machine readable and readily accessible on FDLE's website.
- Data must be made comparable, transferable, and readily usable.
- FDLE must develop methods for archiving data, retrieving archived data, and data editing and verification.
- Submissions to FDLE must include standard data element names, standard business rules, and standard format of data collection.
- The Criminal and Juvenile Justice Information Systems (CJJIS) Council must approve the technical specifications.

C. Proposed Business Process Requirements

1. Process Requirements

Purpose: To establish a basis for understanding what business process requirements the proposed solution must meet in order to select an appropriate solution for the project.

Criminal justice data transparency requires the establishment of technical specifications and processes to facilitate the availability of comparable and uniform criminal justice data. FDLE is required to collect, compile, maintain, manage, and publish the data required by s. 900.05, F.S. and ensure that the data is comparable, transferable, and readily usable. The data must be publicly available, searchable, and downloadable, and records must be linked by individual. Some of the following processes are required for CJDT:

- 1) Create a technical specification(s) that defines data objects, descriptive data fields, and options for each data element that is readily accessible through FDLE's website.
- 2) Establish requirements on how entities submit data.
- 3) Develop test environment for verifying connectivity with agencies.
- 4) Establish rules on how the data will be compiled, processed, structured, used, or shared.
- 5) Develop methods for data editing and verification.
- 6) Establish procedures for implementing and monitoring the internet database, including the frequency in which the data is refreshed, e.g., biweekly, monthly.
- 7) Provide rules for linking all information associated with each case number and unique identifier.
- 8) Establish processed for exposing data to be accessed by the public.
- 9) Monitor data collection procedures.
- 10) Test data quality for accuracy, validity, reliability, and completeness.
- 11) Develop methods and rules for archiving and retrieving archived data.

- 12) Collect, compile, maintain, and manage the data submitted by contributors and coordinate related activities to collect and submit data.

2. Business Solution Alternatives

The CJDT legislation impacts several contributors concerning data collections and public access to the data. FDLE is responsible for ensuring that the specific data elements are received from local and state agencies on a monthly basis.

Three approaches were evaluated as follows:

Approach 1 – Develop a repository or data warehouse, to house all the required data elements to include the elements that are collected through the CCH system. In addition, procure a separate platform to house required statistical reports, and the open data management platform.

Approach 2 – Develop a new system based on the existing data submissions from other agencies, with additional variables added to satisfy legislative requirements.

Approach 3 – Develop a new system to collect, process, store, and display required data.

3. Rationale for Selection

FDLE applied several criteria to compare alternatives and recommend a business solution that best meets the business and strategic needs of the agency, as well as state and local agency stakeholders.

These criteria include:

- Initial and future workload for required entities
- Support for multiple data sets used by the state
- Ability to automate or streamline data collection processes
- Ability to disseminate crime data to the public and stakeholders
- Impact to data systems of submitting entities
- Impact to FDLE Information Technology Services and systems
- Costs

4. Recommended Business Solution

After evaluation of several approaches, the recommended technical solution is Approach 1. With this approach, FDLE will develop a central repository to house all the data elements. The electronic submission of the data will happen through several data streams from agencies to FDLE. This will include data submissions from systems such as the CCH system. Other statistical data will be gathered through pre-determined methods, compiled, analyzed and made available to the public. All data, as allowed by law or policy, will be available through an Open Data Management Platform.

D. Functional and Technical Requirements

Purpose: To identify the functional and technical system requirements that must be met by the project.

Data Collection and Storage

Pursuant to s. 900.05, F.S., state and local entities will coordinate related activities to collect and submit data. FDLE must:

- Create a unique identifier for each person who is the subject of the criminal case
- Create a technical specification that defines data objects, describing data fields, and detailing the meaning of and options for each data element reported
- Establish a solution to automate the processes for collecting, validating, auditing, updating, and storing data from the required contributors

SCHEDULE IV-B FOR CRIMINAL JUSTICE DATA TRANSPARENCY

- Provide automated data quality checks on the data received from the required contributors to ensure it meets CJDT technical specifications and business rules
- Standardize submissions per the technical specifications and update CCH to meet the new technical specifications
- Provide the ability to export data in multiple formats
- Meet state and federal CJIS security policy, standards, and requirements
- Provide a mechanism for external systems/agencies to exchange data and expand to additional systems in the future

III. Success Criteria

Purpose: To identify the critical results, both outputs and outcomes, that must be realized for the project to be considered a success.

SUCCESS CRITERIA TABLE				
#	Description of Criteria	How will the Criteria be measured/assessed?	Who benefits?	Realization Date (MM/YY)
1	More detailed Criminal Justice Data available in centralized repository	Agencies submit data using FDLE rule and technical requirements	FDLE Local and state agencies/officials State policymakers Public	01/21
2	More detailed and accurate crime data available	Agencies submit data to repository.	FDLE Local and state agencies/officials State policymakers Public	06/22
3	Leverage new technology	Use of standards such as web services and open data platform	FDLE Local and state agencies/officials Public	10/20 12/19 began publishing legacy data on new technology
4	More data available to public and stakeholder as defined by FDLE rule and requirements	Data availability in public format	FDLE Local and state agencies/officials State policymakers Public	01/21
5	Consistent collection, linkage, and reporting of criminal justice data from multiple data owners	Definitions of identified data elements for use by all agencies	FDLE Local and state agencies/officials State policymakers Public	10/20

IV. Schedule IV-B Benefits Realization and Cost Benefit Analysis

A. Benefits Realization Table

Purpose: To calculate and declare the tangible benefits compared to the total investment of resources needed to support the proposed IT project.

BENEFITS REALIZATION TABLE					
#	Description of Benefit	Who receives the benefit?	How is benefit realized?	How is the realization of the benefit measured?	Realization Date (MM/YY)
1	Data for applicable criminal justice data for use by all Criminal Justice Agencies	Criminal Justice Agencies; State and Local Policymakers; State and Local governments; FDLE.	Creation of a data catalog	Evaluated and adopted by the oversight council, CJJIS Council	07/20 (completed)
2	More detailed Criminal Justice Data available in centralized repository	Criminal Justice Agencies; State and Local Policymakers; State and Local governments; FDLE; Public.	Data is collected and made available on a consistent basis	Implementation of new methods for receiving and publishing of open data.	06/22
3	Automated submission processes and availability of information as defined by law	Criminal Justice Agencies; State and Local Policymakers; State and Local governments; FDLE; Public.	Data is collected in an automated process, analyzed, and published in open data platform	Implementation of new methods for receiving and publishing of open data.	06/22

B. Cost Benefit Analysis (CBA)

Purpose: To provide a comprehensive financial prospectus specifying the project's tangible benefits, funding requirements, and proposed source(s) of funding.

Cost Benefit Analysis spreadsheets are in Appendix C.

V. Schedule IV-B Major Project Risk Assessment

Purpose: To provide an initial high-level assessment of overall risk incurred by the project to enable appropriate risk mitigation and oversight and to improve the likelihood of project success. The risk assessment summary identifies the overall level of risk associated with the project and provides an assessment of the project's alignment with business objectives.

VI. Schedule IV-B Technology Planning

A. Current Information Technology Environment

Purpose: To ensure there is close alignment with the business and functional requirements and the selected technology.

1. Current System

a. Description of Current System

The Florida Department of Law Enforcement does not have a current established business process for these systems. These are new requirements for the Department.

b. Current System Resource Requirements

Not applicable

c. Current System Performance

Not applicable

2. Information Technology Standards

See attached Appendix F for FDLE information technology standards. When applicable, FDLE's information technology standards are followed. Additional requirements are listed below.

- Requirements of Florida Statutes sections 282.318, 501.171, 775.085, 812.014, 815.06, 817.568, 847.0135, 847.0137, 847.0138, 847.0139, 877.19, 900.05, 943.05, 943.051, 943.053, 943.054, 943.0544, 943.6871, and Chapters 119, 815, 817 Part II, 934, in addition to a variety of other statutes detailing background screening requirements, which describe FDLE's duties as the State's central repository for criminal record information and gateway to the Federal repository.
- NIEM 4.2 (or current version)

B. Current Hardware and/or Software Inventory

Not applicable.

C. Proposed Technical Solution

1. Technical Solution Alternatives

The CJDT legislation impacts several contributors concerning data collections and public access to the data. The FDLE is responsible for ensuring that the specific data elements are received from local and state agencies on a monthly basis.

Three approaches were evaluated as follows:

Approach 1 – Develop a repository or data warehouse, to house all the required data elements to include the elements that are collected through the CCH system. In addition, procure a separate platform to house required statistical reports, and the open data management platform.

Approach 2 – Develop a new system based on the existing data submissions from other agencies, with additional variables added to satisfy legislative requirements.

Approach 3 – Develop a new system to collect, process, store, and display required data.

2. Rationale for Selection

FDLE applied several criteria to compare alternatives and recommend a business solution that best meets the business and strategic needs of the agency, as well as state and local agency stakeholders.

These criteria include:

- Initial and future workload for required entities
- Support for multiple data sets used by the state
- Ability to automate or streamline data collection processes
- Ability to disseminate crime data to the public and stakeholders
- Impact to data systems of submitting entities
- Impact to FDLE IT services and systems
- Costs

3. Recommended Technical Solution

After evaluation of several approaches, the recommended technical solution is Approach 1. With this approach, FDLE will develop a central repository to house all the data elements. The electronic submission of the data will happen through several data streams from agencies to FDLE. This will include data submissions from systems such as the CCH system and the Florida Incident-Based Reporting System (FIBRS). Other statistical data will be gathered through pre-determined methods, compiled, analyzed and made available to the public. All data, as allowed by law or policy, will be available through an Open Data Management Platform.

D. Proposed Solution Description

The CJDT solution will leverage technology from the Florida Incident-Based Reporting System (FIBRS) project by utilizing a standard technical specification that will streamline the submission of data to FDLE. This will have the added benefit of reducing the need for multiple repositories. Independently implementing CJDT will significantly increase the cost for FDLE and data contributors.

1. Summary Description of Proposed System

There are two major components that are part of the planned approach: (a) the repository system that receives data from agencies, stores and processes the data, and generates data submissions for transmission to other systems, and (b) an open data management system that makes the data available to the public.

System Type

CJDT System will utilize a data warehouse hosting all data submitted by state and local agencies to FDLE, and will include a machine-to-machine service for agencies to upload data by a predetermined format. System will include an application server, web server, and a database server, with a web-based interface to perform numerous administrative and managerial functions related to user management and data handling, as described above. Operating system, database management system, storage, programming language, etc. for the CJDT system was determined based on negotiation between FDLE and the vendor selected.

Connectivity

CJDT will leverage existing and newly defined data feeds from state and local agencies over secure connections.

Security, Privacy, Confidentiality, Access

These standards will be the same as the current security standards used by FDLE. Since data will contain personally identifiable information, data controls will be established to ensure that access to sensitive data is

restricted to appropriate personnel.

Development and Procurement Approach

To realize the business solution, FDLE plans to acquire commercially available systems that can be customized to meet FDLE’s business requirements. The contracted systems will include, but are not limited to:

- Commercial CJDT Repository
- Open Data Management Service
- Project management services
- Software customization services
- Data analysis services
- System integration and testing services
- Implementation and configuration
- Support services
- Training services

Maturity and Life Expectancy of the Technology

FDLE intends to procure a mature solution, with customizable functionality to accommodate the business need. The vendor solutions shall be flexible to facilitate future changes and upgrades as applicable.

2. Resource and Summary Level Funding Requirements for Proposed Solution (if known)

Anticipated project costs for CJDT are summarized in the table below:

SCHEDULE IV-B FOR CRIMINAL JUSTICE DATA TRANSPARENCY

Title:	Criminal Justice Data Transparency			
Tracking #:	TBD			
Customer:	Criminal Justice Information Services	Customer Contact:		
Manager:	Abdullah Alman	ITS Lead:		
Planned Start:	7/1/2019	Planned Finish: 6/30/2023		
Duration (mos):	48.7			
Baseline Date:	10/1/2018			
Revision Date:	9/30/2020	Version #:	1.0	
Project Budget	Actual	Planned	Planned	
Cost Elements	FY 19/20	FY 20/21	FY 21/22	Totals
Staff				
State Staff	\$134,967	\$277,274	\$457,649	\$869,891
OPS	\$0	\$0	\$0	\$0
Expenses				
Other Expenses	\$6,623	\$75,174	\$90,544	\$172,341
Contract Services				
Contract Staff	\$242,536	\$880,125	\$990,400	\$2,113,061
Project Deliverables	\$349,446	\$5,114,828	\$1,937,043	\$7,401,317
Other	\$30,573	\$552,849	\$0	\$583,422
Total	\$764,145	\$6,900,250	\$3,475,636	\$11,140,032
Maintenance Budget				
Cost Elements	FY 19/20	FY 20/21	FY 21/22	Totals
Maintenance Expenses	\$255,144	\$582,459	\$763,342	\$1,600,945
Contracted Services Maintenance	\$0	\$179,226	\$716,904	\$896,130
Total	\$255,144	\$761,685	\$1,480,246	\$2,497,075

E. Capacity Planning

(historical and current trends versus projected requirements)

CJDT does not have historical data, yet the CJDT solution needs to meet the annual capacity requirements. The annual number of arrests in Florida for the past five years is listed below.

- 2014 – 867,084
- 2015 – 773,174
- 2016 – 726,496
- 2017 – 711,831
- 2018 – 716,653

It is estimated that the CJDT solution will need to handle a capacity of 24 million records. The number of records includes totals from the Computerized Criminal History system, FIBRS, and employee count data.

VII. Schedule IV-B Project Management Planning

Purpose: To require the agency to provide evidence of its thorough project planning and provide the tools the agency will use to carry out and manage the proposed project. The level of detail must be appropriate for the project's scope and complexity.

FDLE established two separate projects for the implementation of the CJDT solution and the uniform arrest affidavit based on the different start dates, deadlines and funding for each solution. For each project, FDLE will prepare a Project Management Plan. This plan will include:

Project Phasing Plan and Scope

This project consists of three high-level phases: detailed planning, procurement/contracting, and implementation and deployment.

Phase 1 - Detailed Planning

The detailed planning phase involved designing and developing the system technical specification and technical requirements, assembling the project team, and establishing mechanisms for FDLE to collaborate with state and local agencies and with vendors. The CJJIS Council approved the technical specifications for the CJDT solution.

Phase 2 - Contracting

This phase of the project included obtaining funding and statutory approvals to move forward with the procurement process. The specifications and requirements developed during the detailed planning phase will be used to develop the procurement(s). Where applicable, FDLE will procure a vendor(s) commercial product.

Phase 3 - Implementation and Deployment

The implementation and deployment phase started as soon as the technical specification and requirements were available and the competitive procurement was complete. In addition, FDLE began development of a test plan and various documentation and software tools to simplify development and testing of products.

Baseline Schedule

A more detailed baseline schedule can be found in Appendix E.

Project Organization

Each project requires coordination and management of a skilled project staff consisting of technical, functional, and administrative staff, mixed with contract staff and task-specific vendors.

Each project organization consists of the Project Steering Committee (PSC), the Project Manager (PM), and the Project Team. FDLE SME's and a number of other groups provide additional support. Each group performs a particular role for the project and is comprised of members of ITS, CJIS, and FDLE leadership.

FDLE Project Steering Committee (PSC)

The PSC approves deliverables and change requests for the project. Members of the PSC include Criminal Justice Information Services and Information Technology Services.

Project Manager

The PM is responsible for the overall management and coordination of the work effort and successful completion of the project. The PM monitors the day-to-day status of project team efforts. This includes establishing and maintaining the project management plan, assigning, directing, and monitoring the work of project staff, serving as FDLE's primary point of contact for the prime contractor, managing issues and risks, monitoring and reporting project status, and reviewing contract deliverables prior to delivery to the PSC for approval.

Project Team

The Project Team consists of a core group of FDLE members responsible for the day-to-day tasks associated with the project. This team will be comprised largely of members of Criminal Justice Information Services, Information Technology Services and any other positions (FTE or Contract) deemed necessary for the successful completion of the project. The Project Team is creating a Resource Plan which defines all resources for the project including all positions deemed necessary.

Contract Manager

As a member of the Project Team, the Contract Manager is responsible for gathering the necessary information for developing the statement of work (SOW) and other contracting vehicles, monitoring the award of those contracts, ensuring performance delivery as required by the contract and closing out contracts when the tasks are completed. The Contract Manager works closely with FDLE contract and legal members to ensure that all work is accomplished within State and FDLE contracting rules and guidelines. The Contract Manager will coordinate budget issues and maintain awareness of all expenditures and accounts payable.

FDLE Implementation and Transition Unit (ITU)

Workgroups will assist the Project Team in ensuring that the CJDT project meets the operational needs. SMEs, representatives from business operations, and IT will be assigned to the project. The unit will be responsible for implementation and transition as well as for stakeholder and customer communication, education/training, preparation and readiness for the new technology. They will evaluate existing policies and determine whether modifications are needed, or if new policies need to be created, to mitigate privacy or other risks related to new services and business processes.

The ITU will serve as the conduit through which user community stakeholders and program personnel communicate, ensuring the resulting services are compliant with the mission. This includes policy identification/coordination for new services, questions for the record, and public inquires. This project will require extensive coordination with contributors as they make modifications to their systems to become compliant with state specifications. ITU members are housed in the Criminal Justice Analytics Bureau.

Quality Assurance Plan

The focus of the quality management process is to build effective processes that enable the production of high quality deliverables that meet the specified business requirements. The quality management procedure consists of two principal processes: Quality Assurance (QA) and Quality Control (QC).

Quality Assurance

QA is the practice of adhering to planned, established and systematic approaches designed to ensure the high caliber of the deliverables and the detection and correction of any errors. It provides information about a common set of guidelines and standards to be applied by the Project Team. The primary aspect of a QA review is to ensure that the processes established for the project are being followed. If new processes are required, a group will be formed to establish the quality procedure. The benefits of following quality assurance processes include the following:

- Improved communication
- Improved planning and requirement gathering/definition processes
- Improved development process
- Improved product quality
- Better criteria for hardware and software testing
- Easier transition to production for hardware and software

The most effective QA activity is a formal QA review. The Project Team and PSC will conduct these reviews of project processes. Using results generated by this review, the PM will direct follow-up actions to ensure that the project uses sound processes. Additionally, the PSC will advise the PM of any observed deficiencies in processes and the PM will take corrective action to resolve the deficiency in the future.

Quality Control

QC activities are those focused on the inspection and/or testing of the deliverable produced. The QC Team will verify that the deliverables are of acceptable quality and that they are technically accurate. QC is the responsibility of the Project Team and the PM or Task Lead responsible for a deliverable. The PM will monitor the activities associated with the acceptance of deliverables. QC is conducted before a deliverable is submitted as final to be approved by the PM. The Project Manager is responsible for developing and maintaining a Quality Plan. The Quality Plan will document major deliverables of the project, completeness and correctness criteria, quality control activities and quality assurance activities.

Topics Addressed in the Quality Plan:

Quality Control activities associated with project deliverables:

- Document Deliverables
- Hardware and Software Deliverables
- Service Deliverables

Quality Assurance activities:

- QA processes (Requirements Traceability, Testing, Data Migration, etc.)
- Responsibility for QA processes

Quality Metrics for the project such as:

- Changes in Scope
- Changes to Schedule
- Changes in Cost
- Number and Type of Issues
- Number and Type of Defects
- Preparedness of customer to assume production responsibilities
- Preparedness of IT to assume production responsibilities
- Solution “Fitness for Use”

System testing and operational acceptance testing will be the primary QC processes used to assure that deliverables meet FDLE’s documented requirements. System testing will involve specific testing and measurement at a technical level to verify compatibility, usability, performance, accuracy, and content of results.

External Project Oversight

Criminal and Juvenile Justice Information Systems (CJJIS) Council

The CJJIS Council was created by section 943.08, F.S., with the purpose to develop and implement a statewide strategy for identification, sharing, and coordination of criminal and juvenile justice data among federal, state and local criminal justice agencies. The Council is comprised by 14 members, consisting of representatives from the Attorney General, State Attorneys, Department of Law Enforcement, Department of Corrections, Parole Commission, Department of Juvenile Justice, Department of Highway Safety and Motor Vehicles, Public Defenders and the Office of State Court Administrators. The Governor of Florida appoints two sheriffs, two police chiefs, and one clerk of court to the Council. With this broad representation of the criminal justice community, all issues receive a full and fair hearing from all perspectives.

Change Management

Change management occurs throughout the lifecycle of the project. A change can be related to any facet of the project – scope creep, schedule revision, funding / cost changes, team / resource changes, issues and risks, etc.

If the change is minor, the PM may determine that the change can be met within current project parameters and the formal change process is not necessary. If the change could impact requirements, deliverables, payment schedule, cost, or completion date of a major milestone, the PM (or team member assigned) will fully research the impact of the project change and formulate a resolution. The PM will complete a formal Project Change Request form and present the change to the PSC.

The PSC will determine if the proposed change should be approved. Members of the PSC will signify approval or disapproval of a proposed project change by signing the Project Change Request form.

If the Project Steering Committee or FDLE Leadership (Assistant Commissioner, Director of CJIS, Director of Business Support, and the Chief Information Officer) determines that the approved project change will require a Contract Amendment, the PM will work with the vendor to prepare the Contract Amendment for the PSC's review and approval. The contract amendment will then be processed according to FDLE contract procedures.

Communications Plan

The PM will develop a Communications Plan to provide a framework for addressing communications with project stakeholders. The Communications Plan outlines a comprehensive strategy of both communicating project and process change information to the stakeholders as well as receiving and processing input/feedback from stakeholders. The Communication Plan identifies communication strategies which will be used to target the different audience groups (users, stakeholders, advisors, decision-makers, etc.) via an assortment of communication methods (Internet and email, formal and informal documents, multi-media presentations, and face-to-face meetings). This document serves as the core of the change management effort and will be updated throughout the life of the project.

The Project Manager is responsible for developing and maintaining a Communication Management Plan. This plan will document how and in what format information will be communicated, when and where communication will be made, and who is responsible for providing each type of communication.

Topics included in the Communication Management Plan:

1. Target Audience - Identification of all possible audience groups in as much detail as possible:
 - Specific stakeholder groups
 - Data contributors
 - Project Team
 - Project Steering Committee
 - FDLE management
 - FDLE customers
 - Legislature and Cabinet
 - Oversight agencies
2. Communication Method Communications may be formal, such as status reports, Operational Work Plans, newsletters, and quarterly meetings or informal such as notices or announcements through email or website. Communications may also be in written form or face-to-face. Examples include such things as:
 - Status reports
 - Operational Work Plans
 - Stakeholder /customer surveys

- Project and program newsletters
 - Project and program websites
 - Ad Hoc notices
 - Project Steering Committee meetings
 - Project Team meetings
 - FDLE Executive Leadership briefs
3. Method of Delivery - Methods of delivery could be such things as:
- Emails
 - Presentations
 - Reports
 - Websites
 - Documents (electronic or paper)
 - Meetings
4. Frequency
- Some communications could be set at regular intervals such as meetings or reports required annually, quarterly, biweekly, etc. or upon specific project milestone or phase timelines according to project needs. Some communication could also be random and event-specific such as notices dealing with specific issues.
5. Responsibility
- Each type of communication must be assigned to the PM or a specific member of the Project Team.

Risk Management

The Risk Management Plan describes the plan to manage risks throughout the life of the project. A risk refers to future conditions or circumstances, which will have an adverse impact on the project if they occur, that exist outside of the control of FDLE or the Project Team. In other words, a risk is a potential future problem. Risk management is performed continually over the life of the project. Risk management includes the following:

- Step 1: Identify major risks to project success
- Step 2: Assess the potential impact of each risk and its probability of occurrence
- Step 3: Determine appropriate contingency plans
- Step 4: Determine the acceptable level of tolerance for each risk
- Step 5: Specify mitigation strategies to be implemented for critical risks
- Step 6: Periodically review the effectiveness of mitigation strategies and identify any new risks.

Risk identification occurs throughout the life of the project. Any project stakeholder, Project Team member, customer or contractor can submit a risk at any time. A risk mitigation session is conducted at the start of each build or phase. The PM will manage the FDLE risk documents which is one of the artifacts maintained throughout the life of the project. Distribution of the risk document will be agreed upon between the FDLE and the vendor PM at the beginning of the engagement. The risk document will be an electronic document and available to the Project Team and PSC at all times during the project.

The PM (in consultation with the PSC) evaluates the risk and recommends a risk level. The risk level is used to set the priority of the risk and determine how risks should be addressed.

Risk management includes an ongoing cycle of risk identification, analysis and monitoring. Each risk with a risk level of medium or high is evaluated to determine if the impact is severe enough that a risk mitigation plan should be created. If a risk mitigation plan is required, the risk is investigated to determine whether or not the resolution of a risk causes the budget, personnel, scope or schedule to change. In the event a risk mitigation plan must be exercised, project change control processes will be used (if necessary) and activities associated with the risk mitigation plan will be added to the Project Schedule to ensure the work is completed. The PM monitors all risk mitigation plans to ensure they are being executed successfully.

Implementation Plan

The projects will utilize an implementation plan for deploying the solutions to the projection environment. The implementation plan identifies all activities required for successful deployment(s) of the solutions for production use. The implementation plan will include:

- Implementation Plan (Step-by-step instructions)
- Go-live Schedule
- Implementation Approvals
- Implementation Communication Plan
- Dependencies
- Resource Requirements
- Failback Plan
- Post-Implementation Tasks

VIII. Appendices

Appendix A –Standards and Definitions

Appendix B – Project Risk Assessment

Appendix C – Cost Benefit Analysis

Appendix D – Project Budget

Appendix E – Project Schedules

Appendix F – Information Technology Standards

Appendix A– Standards and Definitions

1. 28 Code of Federal Regulations Part 20 (28 CFR Part 20)

These regulations are in place to assure that criminal history record information, wherever it appears, is collected, stored, and disseminated in a manner to ensure the accuracy, completeness, currency, integrity, and security of such information and to protect individual privacy.

2. Chapter 74-2, F.A.C. the State of Florida Cybersecurity Standards (FCS)

<https://www.flrules.org/gateway/ruleNo.asp?id=74-2.001>

3. Department of Justice (DOJ) Global Reference Architecture (GRA)

GRA enhances justice and public safety through a service-oriented approach to information sharing. It is accomplished by providing reference architecture with guidance for identifying, defining, implementing, and governing services.

GRA is an information exchange solution designed to cut 80 percent of implementation time and costs for state and local justice agencies through reuse of established promising practices in IT architecture and design.

4. FBI CJIS Security Policy(CSP)

The CJIS Security Policy provides guidance for the creation, viewing, modification, transmission, dissemination, storage, and destruction of CJIS data. This policy applies to every individual—contractor, private entity, noncriminal justice agency representative, or member of a criminal justice entity—with access to, or who operate in support of, criminal justice services and information.

5. FBI Electronic Biometric Transmission Specification (EBTS)

The FBI Criminal Justice Information Services Division is moving toward a system that will contain a complete biometric and biographic profile of the subject records in its databases. Although fingerprints will continue to be the FBI's primary mode of identification for the near future, the scope of the EBTS has been expanded over previous versions to include additional biometric modalities (e.g., palm print, facial, and iris) in recognition of the rapidly developing biometric identification industry. The most recent update to the American National Standards Institute /National Institute of Standards and Technology-Information Technology Laboratory 1-2011 standard (ANSI/NIST-ITL 1-2011) includes new record types to facilitate data sharing of new biometric modalities. Integrating biometric data in accordance with the ANSI/NIST standard, the FBI EBTS provides a description of all requests and responses associated with electronic fingerprint and other biometric identification services.

6. Global Federated Identity and Privilege Management (GFIPM)

The goal of GFIPM is to enable information sharing for state and local agencies through a federated model that is secure, scalable, and cost-effective. One of the guiding principles of GFIPM is to seek to understand and meet the needs of state and local agencies through a collaborative, consensus-based process that incorporates the input of all major stakeholders, including state and local agencies as well as the federal government.

7. Lightweight Directory Access Protocol (LDAP)/Active Directory

LDAP is an application protocol for accessing and maintaining distributed directory information services over an Internet Protocol (IP) network.

8. National Information Exchange Model (NIEM)

The National Information Exchange Model is a community-driven, government-wide, standards-based approach to exchanging information. NIEM connects communities of people who share a common need to exchange information in order to advance their mission.

Used in all 50 states and internationally, NIEM is available to everyone. It is a consistent starting point—which includes a data model, governance, training, tools, technical support services, and an active community—that assists users in adopting a standards-based approach to exchanging data.

When it matters most—protecting citizens, responding to disasters, monitoring prescription drug abuse, identifying welfare assistance eligibility, or providing support services to children and families—NIEM provides quick access to accurate, complete, and actionable information.

9. Security Assertion Markup Language (SAML)

SAML is an Extensible Markup Language (XML) based open standard data format for exchanging authentication and authorization data between parties, in particular, between an identity provider and a service provider.

10. United States Rehabilitation Act – Section 508 details accessibility standards for all systems

The Section 508 Standards are part of the Federal Acquisition Regulation (FAR) and address access for people with physical, sensory, or cognitive disabilities. They contain technical criteria specific to various types of technologies and performance-based requirements, which focus on functional capabilities of covered products. Specific criteria cover software applications and operating systems, web-based information and applications, computers, telecommunications products, video and multi-media, and self-contained closed products.

1	Agency: Florida Department of Law Enforcement		Project: Criminal Justice Data Transparency	
3	Section 1 -- Strategic Area			
4	#	Criteria	Values	Answer
5	1.01	Are project objectives clearly aligned with the agency's legal mission?	0% to 40% -- Few or no objectives aligned	81% to 100% -- All or nearly all objectives aligned
6			41% to 80% -- Some objectives aligned	
7			81% to 100% -- All or nearly all objectives aligned	
8	1.02	Are project objectives clearly documented and understood by all stakeholder groups?	Not documented or agreed to by stakeholders	Documented with sign-off by stakeholders
9			Informal agreement by stakeholders	
10			Documented with sign-off by stakeholders	
11	1.03	Are the project sponsor, senior management, and other executive stakeholders actively involved in meetings for the review and success of the project?	Not or rarely involved	Project charter signed by executive sponsor and executive team actively engaged in steering committee meetings
12			Most regularly attend executive steering committee meetings	
13			Project charter signed by executive sponsor and executive team actively engaged in steering committee meetings	
14	1.04	Has the agency documented its vision for how changes to the proposed technology will improve its business processes?	Vision is not documented	Vision is completely documented
15			Vision is partially documented	
16			Vision is completely documented	
17	1.05	Have all project business/program area requirements, assumptions, constraints, and priorities been defined and documented?	0% to 40% -- Few or none defined and documented	81% to 100% -- All or nearly all defined and documented
18			41% to 80% -- Some defined and documented	
19			81% to 100% -- All or nearly all defined and documented	
20	1.06	Are all needed changes in law, rule, or policy identified and documented?	No changes needed	No changes needed
21			Changes unknown	
22			Changes are identified in concept only	
23			Changes are identified and documented	
24			Legislation or proposed rule change is drafted	
25	1.07	Are any project phase or milestone completion dates fixed by outside factors, e.g., state or federal law or funding restrictions?	Few or none	All or nearly all
26			Some	
27			All or nearly all	
28	1.08	What is the external (e.g. public) visibility of the proposed system or project?	Minimal or no external use or visibility	Extensive external use or visibility
29			Moderate external use or visibility	
30			Extensive external use or visibility	
31	1.09	What is the internal (e.g. state agency) visibility of the proposed system or project?	Multiple agency or state enterprise visibility	Multiple agency or state enterprise visibility
32			Single agency-wide use or visibility	
33			Use or visibility at division and/or bureau level only	
34	1.10	Is this a multi-year project?	Greater than 5 years	Between 1 and 3 years
35			Between 3 and 5 years	
36			Between 1 and 3 years	
37			1 year or less	

	B	C	D	E
1	Agency: Florida Department of Law Enforcement		Project: Criminal Justice Data Transparency	
3	Section 2 -- Technology Area			
4	#	Criteria	Values	Answer
5	2.01	Does the agency have experience working with, operating, and supporting the proposed technical solution in a production environment?	Read about only or attended conference and/or vendor presentation	Installed and supported production system more than 3 years
6			Supported prototype or production system less than 6 months	
7			Supported production system 6 months to 12 months	
8			Supported production system 1 year to 3 years	
9			Installed and supported production system more than 3 years	
10	2.02	Does the agency's internal staff have sufficient knowledge of the proposed technical solution to implement and operate the new system?	External technical resources will be needed for implementation and operations	External technical resources will be needed for implementation and operations
11			External technical resources will be needed through implementation only	
12			Internal resources have sufficient knowledge for implementation and operations	
13	2.03	Have all relevant technical alternatives/ solution options been researched, documented and considered?	No technology alternatives researched	Some alternatives documented and considered
14			Some alternatives documented and considered	
15			All or nearly all alternatives documented and considered	
16	2.04	Does the proposed technical solution comply with all relevant agency, statewide, or industry technology standards?	No relevant standards have been identified or incorporated into proposed technology	Proposed technology solution is fully compliant with all relevant agency, statewide, or industry standards
17			Some relevant standards have been incorporated into the proposed technology	
18			Proposed technology solution is fully compliant with all relevant agency, statewide, or industry standards	
19	2.05	Does the proposed technical solution require significant change to the agency's existing technology infrastructure?	Minor or no infrastructure change required	Minor or no infrastructure change required
20			Moderate infrastructure change required	
21			Extensive infrastructure change required	
22			Complete infrastructure replacement	
23	2.06	Are detailed hardware and software capacity requirements defined and documented?	Capacity requirements are not understood or defined	Capacity requirements are defined only at a conceptual level
24			Capacity requirements are defined only at a conceptual level	
25			Capacity requirements are based on historical data and new system design specifications and performance requirements	

	B	C	D	E
1	Agency: Florida Department of Law Enforcement		Project: Criminal Justice Data Transparency	
3	Section 3 -- Organizational Change Management Area			
4	#	Criteria	Values	Answer
5	3.01	What is the expected level of organizational change that will be imposed within the agency if the project is successfully implemented?	Extensive changes to organization structure, staff or business processes	Minimal changes to organization structure, staff or business processes structure
6			Moderate changes to organization structure, staff or business processes	
7			Minimal changes to organization structure, staff or business processes structure	
8	3.02	Will this project impact essential business processes?	Yes	Yes
9			No	
10	3.03	Have all business process changes and process interactions been defined and documented?	0% to 40% -- Few or no process changes defined and documented	41% to 80% -- Some process changes defined and documented
11			41% to 80% -- Some process changes defined and documented	
12			81% to 100% -- All or nearly all processes defined and documented	
13	3.04	Has an Organizational Change Management Plan been approved for this project?	Yes	Yes
14			No	
15	3.05	Will the agency's anticipated FTE count change as a result of implementing the project?	Over 10% FTE count change	Less than 1% FTE count change
16			1% to 10% FTE count change	
17			Less than 1% FTE count change	
18	3.06	Will the number of contractors change as a result of implementing the project?	Over 10% contractor count change	Less than 1% contractor count change
19			1 to 10% contractor count change	
20			Less than 1% contractor count change	
21	3.07	What is the expected level of change impact on the citizens of the State of Florida if the project is successfully implemented?	Extensive change or new way of providing/receiving services or information)	Extensive change or new way of providing/receiving services or information)
22			Moderate changes	
23			Minor or no changes	
24	3.08	What is the expected change impact on other state or local government agencies as a result of implementing the project?	Extensive change or new way of providing/receiving services or information	Extensive change or new way of providing/receiving services or information
25			Moderate changes	
26			Minor or no changes	
27	3.09	Has the agency successfully completed a project with similar organizational change requirements?	No experience/Not recently (>5 Years)	Recently completed project with greater change requirements
28			Recently completed project with fewer change requirements	
29			Recently completed project with similar change requirements	
30			Recently completed project with greater change requirements	

	B	C	D	E
1	Agency: Agency Name		Project: Project Name	
3	Section 4 -- Communication Area			
4	#	Criteria	Value Options	Answer
5	4.01	Has a documented Communication Plan been approved for this project?	Yes	Yes
6			No	
7	4.02	Does the project Communication Plan promote the collection and use of feedback from management, project team, and business stakeholders (including end users)?	Negligible or no feedback in Plan	Routine feedback in Plan
8			Routine feedback in Plan	
9			Proactive use of feedback in Plan	
10	4.03	Have all required communication channels been identified and documented in the Communication Plan?	Yes	Yes
11			No	
12	4.04	Are all affected stakeholders included in the Communication Plan?	Yes	Yes
13			No	
14	4.05	Have all key messages been developed and documented in the Communication Plan?	Plan does not include key messages	Some key messages have been developed
15			Some key messages have been developed	
16			All or nearly all messages are documented	
17	4.06	Have desired message outcomes and success measures been identified in the Communication Plan?	Plan does not include desired messages outcomes and success measures	Plan does not include desired messages outcomes and success measures
18			Success measures have been developed for some messages	
19			All or nearly all messages have success measures	
20	4.07	Does the project Communication Plan identify and assign needed staff and resources?	Yes	Yes
21			No	

B		C		D		E	
1	Agency: Florida Department of Law Enforcement			Project: Criminal Justice Data Transparency			
3	Section 5 -- Fiscal Area						
4	#	Criteria	Values			Answer	
5	5.01	Has a documented Spending Plan been approved for the entire project lifecycle?	Yes			Yes	
6			No				
7	5.02	Have all project expenditures been identified in the Spending Plan?	0% to 40% -- None or few defined and documented			81% to 100% -- All or nearly all defined and documented	
8			41% to 80% -- Some defined and documented				
9			81% to 100% -- All or nearly all defined and documented				
10	5.03	What is the estimated total cost of this project over its entire lifecycle?	Unknown			Greater than \$10 M	
11			Greater than \$10 M				
12			Between \$2 M and \$10 M				
13			Between \$500K and \$1,999,999				
14			Less than \$500 K				
15	5.04	Is the cost estimate for this project based on quantitative analysis using a standards-based estimation model?	Yes			No	
16			No				
17	5.05	What is the character of the cost estimates for this project?	Detailed and rigorous (accurate within ±10%)			Order of magnitude – estimate could vary between 10-100%	
18			Order of magnitude – estimate could vary between 10-100%				
19			Placeholder – actual cost may exceed estimate by more than 100%				
20	5.06	Are funds available within existing agency resources to complete this project?	Yes			No	
21			No				
22	5.07	Will/should multiple state or local agencies help fund this project or system?	Funding from single agency			Funding from single agency	
23			Funding from local government agencies				
24			Funding from other state agencies				
25	5.08	If federal financial participation is anticipated as a source of funding, has federal approval been requested and received?	Neither requested nor received			Requested and received	
26			Requested but not received				
27			Requested and received				
28			Not applicable				
29	5.09	Have all tangible and intangible benefits been identified and validated as reliable and achievable?	Project benefits have not been identified or validated			Most project benefits have been identified but not validated	
30			Some project benefits have been identified but not validated				
31			Most project benefits have been identified but not validated				
32			All or nearly all project benefits have been identified and validated				
33	5.10	What is the benefit payback period that is defined and documented?	Within 1 year			No payback	
34			Within 3 years				
35			Within 5 years				
36			More than 5 years				
37			No payback				
38	5.11	Has the project procurement strategy been clearly determined and agreed to by affected stakeholders?	Procurement strategy has not been identified and documented			Stakeholders have not been consulted re: procurement strategy	
39			Stakeholders have not been consulted re: procurement strategy				
40			Stakeholders have reviewed and approved the proposed procurement strategy				
41	5.12	What is the planned approach for acquiring necessary products and solution services to successfully complete the project?	Time and Expense (T&E)				Combination FFP and T&E
42			Firm Fixed Price (FFP)				
43			Combination FFP and T&E				
44	5.13	What is the planned approach for procuring hardware and software for the project?	Timing of major hardware and software purchases has not yet been determined			Just-in-time purchasing of hardware and software is documented in the project schedule	
45			Purchase all hardware and software at start of project to take advantage of one-time discounts				
46			Just-in-time purchasing of hardware and software is documented in the project schedule				
47	5.14	Has a contract manager been assigned to this project?	No contract manager assigned			Contract manager assigned is not the procurement manager or the project manager	
48			Contract manager is the procurement manager				
49			Contract manager is the project manager				
50			Contract manager assigned is not the procurement manager or the project manager				
51	5.15	Has equipment leasing been considered for the project's large-scale computing purchases?	Yes			Yes	
52			No				
53	5.16	Have all procurement selection criteria and outcomes been clearly identified?	No selection criteria or outcomes have been identified			All or nearly all selection criteria and expected outcomes have been defined and documented	
54			Some selection criteria and outcomes have been defined and documented				
55			All or nearly all selection criteria and expected outcomes have been defined and documented				
56	5.17	Does the procurement strategy use a multi-stage evaluation process to progressively narrow the field of prospective vendors to the single, best qualified candidate?	Procurement strategy has not been developed			Multi-stage evaluation and proof of concept or prototype planned/used to select best qualified vendor	
57			Multi-stage evaluation not planned/used for procurement				
58			Multi-stage evaluation and proof of concept or prototype planned/used to select best qualified vendor				
59	5.18	For projects with total cost exceeding \$10 million, did/will the procurement strategy require a proof of concept or prototype as part of the bid response?	Procurement strategy has not been developed			No, bid response did/will not require proof of concept or prototype	
60			No, bid response did/will not require proof of concept or prototype				
61			Yes, bid response did/will include proof of concept or prototype				
62			Not applicable				
63							
64							
65							
66							

	B	C	D	E
1	Agency: Florida Department of Law Enforcement		Project: Criminal Justice Data Transparency	
3	Section 6 -- Project Organization Area			
4	#	Criteria	Values	Answer
5	6.01	Is the project organization and governance structure clearly defined and documented within an approved project plan?	Yes	Yes
6			No	
7	6.02	Have all roles and responsibilities for the executive steering committee been clearly identified?	None or few have been defined and documented	All or nearly all have been defined and documented
8			Some have been defined and documented	
9			All or nearly all have been defined and documented	
10	6.03	Who is responsible for integrating project deliverables into the final solution?	Not yet determined	System Integrator (contractor)
11			Agency	
12			System Integrator (contractor)	
13	6.04	How many project managers and project directors will be responsible for managing the project?	3 or more	3 or more
14			2	
15			1	
16	6.05	Has a project staffing plan specifying the number of required resources (including project team, program staff, and contractors) and their corresponding roles, responsibilities and needed skill levels been developed?	Needed staff and skills have not been identified	Staffing plan identifying all staff roles, responsibilities, and skill levels have been documented
17			Some or most staff roles and responsibilities and needed skills have been identified	
18			Staffing plan identifying all staff roles, responsibilities, and skill levels have been documented	
19	6.06	Is an experienced project manager dedicated fulltime to the project?	No experienced project manager assigned	Yes, experienced project manager dedicated full-time, 100% to project
20			No, project manager is assigned 50% or less to project	
21			No, project manager assigned more than half-time, but less than full-time to project	
22			Yes, experienced project manager dedicated full-time, 100% to project	
23	6.07	Are qualified project management team members dedicated full-time to the project	None	Yes, business, functional or technical experts dedicated full-time, 100% to project
24			No, business, functional or technical experts dedicated 50% or less to project	
25			No, business, functional or technical experts dedicated more than half-time but less than full-time to project	
26			Yes, business, functional or technical experts dedicated full-time, 100% to project	
27	6.08	Does the agency have the necessary knowledge, skills, and abilities to staff the project team with in-house resources?	Few or no staff from in-house resources	Half of staff from in-house resources
28			Half of staff from in-house resources	
29			Mostly staffed from in-house resources	
30			Completely staffed from in-house resources	
31	6.09	Is agency IT personnel turnover expected to significantly impact this project?	Minimal or no impact	Minimal or no impact
32			Moderate impact	
33			Extensive impact	
34	6.10	Does the project governance structure establish a formal change review and control board to address proposed changes in project scope, schedule, or cost?	Yes	Yes
35			No	
36	6.11	Are all affected stakeholders represented by functional manager on the change review and control board?	No board has been established	No, all stakeholders are not represented on the board
37			No, only IT staff are on change review and control board	
38			No, all stakeholders are not represented on the board	
39			Yes, all stakeholders are represented by functional manager	

	B	C	D	E
1	Agency: Florida Department of Law Enforcement		Project: Criminal Justice Data Transparency	
3	Section 7 -- Project Management Area			
4	#	Criteria	Values	Answer
5	7.01	Does the project management team use a standard commercially available project management methodology to plan, implement, and control the project?	No	Yes
6			Project Management team will use the methodology selected by the systems integrator	
7			Yes	
8	7.02	For how many projects has the agency successfully used the selected project management methodology?	None	More than 3
9			1-3	
10			More than 3	
11	7.03	How many members of the project team are proficient in the use of the selected project management methodology?	None	Some
12			Some	
13			All or nearly all	
14	7.04	Have all requirements specifications been unambiguously defined and documented?	0% to 40% -- None or few have been defined and documented	81% to 100% -- All or nearly all have been defined and documented
15			41 to 80% -- Some have been defined and documented	
16			81% to 100% -- All or nearly all have been defined and documented	
17	7.05	Have all design specifications been unambiguously defined and documented?	0% to 40% -- None or few have been defined and documented	81% to 100% -- All or nearly all have been defined and documented
18			41 to 80% -- Some have been defined and documented	
19			81% to 100% -- All or nearly all have been defined and documented	
20	7.06	Are all requirements and design specifications traceable to specific business rules?	0% to 40% -- None or few are traceable	81% to 100% -- All or nearly all requirements and specifications are traceable
21			41 to 80% -- Some are traceable	
22			81% to 100% -- All or nearly all requirements and specifications are traceable	
23	7.07	Have all project deliverables/services and acceptance criteria been clearly defined and documented?	None or few have been defined and documented	All or nearly all deliverables and acceptance criteria have been defined and documented
24			Some deliverables and acceptance criteria have been defined and documented	
25			All or nearly all deliverables and acceptance criteria have been defined and documented	
26	7.08	Is written approval required from executive sponsor, business stakeholders, and project manager for review and sign-off of major project deliverables?	No sign-off required	Review and sign-off from the executive sponsor, business stakeholder, and project manager are required on all major project deliverables
27			Only project manager signs-off	
28			Review and sign-off from the executive sponsor, business stakeholder, and project manager are required on all major project deliverables	
29	7.09	Has the Work Breakdown Structure (WBS) been defined to the work package level for all project activities?	0% to 40% -- None or few have been defined to the work package level	41 to 80% -- Some have been defined to the work package level
30			41 to 80% -- Some have been defined to the work package level	
31			81% to 100% -- All or nearly all have been defined to the work package level	
32	7.10	Has a documented project schedule been approved for the entire project lifecycle?	Yes	No
33			No	
34	7.11	Does the project schedule specify all project tasks, go/no-go decision points (checkpoints), critical milestones, and resources?	Yes	No
35			No	
36	7.12	Are formal project status reporting processes documented and in place to manage and control this project?	No or informal processes are used for status reporting	Project team and executive steering committee use formal status reporting processes
37			Project team uses formal processes	
38			Project team and executive steering committee use formal status reporting processes	
39	7.13	Are all necessary planning and reporting templates, e.g., work plans, status reports, issues and risk management, available?	No templates are available	All planning and reporting templates are available
40			Some templates are available	
41			All planning and reporting templates are available	
42	7.14	Has a documented Risk Management Plan been approved for this project?	Yes	Yes
43			No	
44	7.15	Have all known project risks and corresponding mitigation strategies been identified?	None or few have been defined and documented	All known risks and mitigation strategies have been defined
45			Some have been defined and documented	
46			All known risks and mitigation strategies have been defined	
47	7.16	Are standard change request, review and approval processes documented and in place for this project?	Yes	Yes
48			No	
49	7.17	Are issue reporting and management processes documented and in place for this project?	Yes	Yes
50			No

3	Section 8 -- Project Complexity Area			
4	#	Criteria	Values	Answer
5	8.01	How complex is the proposed solution compared to the current agency systems?	Unknown at this time	More complex
6			More complex	
7			Similar complexity	
8			Less complex	
9	8.02	Are the business users or end users dispersed across multiple cities, counties, districts, or regions?	Single location	More than 3 sites
10			3 sites or fewer	
11			More than 3 sites	
12	8.03	Are the project team members dispersed across multiple cities, counties, districts, or regions?	Single location	3 sites or fewer
13			3 sites or fewer	
14			More than 3 sites	
15	8.04	How many external contracting or consulting organizations will this project require?	No external organizations	1 to 3 external organizations
16			1 to 3 external organizations	
17			More than 3 external organizations	
18	8.05	What is the expected project team size?	Greater than 15	5 to 8
19			9 to 15	
20			5 to 8	
21			Less than 5	
22	8.06	How many external entities (e.g., other agencies, community service providers, or local government entities) will be impacted by this project or system?	More than 4	More than 4
23			2 to 4	
24			1	
25			None	
26	8.07	What is the impact of the project on state operations?	Business process change in single division or bureau	Statewide or multiple agency business process change
27			Agency-wide business process change	
28			Statewide or multiple agency business process change	
29	8.08	Has the agency successfully completed a similarly-sized project when acting as Systems Integrator?	Yes	Yes
30			No	
31	8.09	What type of project is this?	Infrastructure upgrade	Implementation requiring software development or purchasing commercial off the shelf (COTS) software
32			Implementation requiring software development or purchasing commercial off the shelf (COTS) software	
33			Business Process Reengineering	
34			Combination of the above	
35	8.10	Has the project manager successfully managed similar projects to completion?	No recent experience	No recent experience
36			Lesser size and complexity	
37			Similar size and complexity	
38			Greater size and complexity	
39	8.11	Does the agency management have experience governing projects of equal or similar size and complexity to successful completion?	No recent experience	Greater size and complexity
40			Lesser size and complexity	
41			Similar size and complexity	
42			Greater size and complexity

Appendix B – FDLE’s Information Technology Standards

The following IT standards have been adopted for FDLE’s information systems and services. The application of specific standards may depend on requirements of the systems and services. Questions should be directed to the Division of Information Technology Services.

- a. Architecture
 - Approved cloud computing service is authorized for FDLE applications.
 - Information systems will be developed to operate in a multi-tier architecture
 - Web-based interfaces will be used for the presentation (user) tier
 - Information systems will use load-balancing where appropriate
 - Information systems will operate on clustered server environments where appropriate
 - Development and testing will be performed on separate non-production servers
 - No data or transactions are to be lost due to isolated failures of equipment
- b. Servers
 - Servers will be scaled to handle large bursts of transactions on each interface where appropriate
 - Virtualization will be used when possible
 - Server operating systems will be either Red Hat Linux or Microsoft Windows Server
- c. Storage
 - Information systems will be designed to use redundant storage technologies in primary and backup or secondary (DR) sites
 - Backup and recovery processes will enable the recovery of data and software in the event that primary files are corrupted or destroyed
- d. Network
 - When officer or public safety is involved, CJNET will be the preferred network transport
 - Firewalls will be used to monitor and control incoming and outgoing network traffic
- e. Database
 - FDLE supports relational database(s) using either Oracle RDBMS, Microsoft SQL Server or MySQL
 - Audit logs will capture forensic metadata for all changes to data, including changes made by FDLE staff
- f. Application Software
 - Commercial software products must be reviewed and approved by ITS
 - Software development standards are specified in FDLE Development Standards Version 2.0
 - FDLE supports software development using Java EE or Microsoft .NET
 - Java development standards are specified in Java Development Standards Version 2.0
 - Web-based application standards are specified in JSF Web Framework Standards Version 2.0
 - JBoss is the preferred application server platform used for FDLE information systems
 - Web Services should be used where possible when application communicates outside the agency
- g. Security
 - 28 CFR Part 20 and Public Law 92-544, regulates sharing criminal justice information with criminal justice and non-criminal justice governmental agencies

- Systems that store or process criminal history information shall meet the FBI CJIS Security Policy (CSP)
- Florida Statutes
 - Chapter 119, F.S. – Public Records
 - Section 282.318, F.S. – Security of data and information technology
 - Section 501.171, F.S. – Security of confidential personal information
 - Chapter 943, F.S. – Department of Law Enforcement
- Administrative Rules
 - 60GG-2, F.A.C., Information Security
 - 60GG-4, F.A.C. – Cloud Computing
 - 60GG-5, F.A.C. – Information Technology Architecture Standards
- FDLE Policies -
 - 1.4 – Use of FDLE Resources
 - 2.5 – Information Security
 - 2.6 – Acceptable Use of Information Technology
 - 3.1 – Background Investigations.

- Cloud Computing
 - Microsoft Azure Security Best Practices

- Industry Standards – Where applicable, compliance with the following standards is preferred:
 - Lightweight Directory Access Protocol (LDAP)/Active Directory (AD)
 - Security Assertion Markup Language (SAML)
 - Global Federated Identity and Privilege Management (GFIPM)

- h. Availability
 - FDLE’s standards on availability: minimum 99.5% uptime

- i. Data Communication Standards
 - Sections 282.701 to 282.711, F.S. – Communication Information Technology Services Act
 - National Information Exchange Model (NIEM)
 - FBI Criminal Justice Information Services (CJIS) Standards, including those associated with;
 - National Crime Information Center (NCIC)
 - Interstate Identification Index (III)
 - National Fingerprint File (NFF)
 - National Instant Criminal Background Check System (NICS)
 - National Data Exchange (N-Dex)

- j. Accessibility
 - United States Rehabilitation Act – Section 508 details accessibility standards for all systems
 - Section 282.601 to 282.606, F.S. – Accessibility of Information and Technology

- k. Desktop Computing
 - Microsoft Windows Operating System
 - Microsoft Office
 - Microsoft Visio
 - Microsoft Project
 - Adobe Acrobat

I. Project Management

- Sections 282.003 to 282.318, F.S. – Information Technology Management Act
- Rule 60GG-1, F.A.C. – Project Management and Oversight Standards
- Project Management Institute, Project Management Body of Knowledge (PMBOK)
- All production deployments must follow ITS procedure 5.1 “Production Change” CCCB

m. Deviations from these standards must be directed ITS for review and approval.

n. All identified technologies must be in a supported version

I. Schedule IV-B Cover Sheet

Schedule IV-B Cover Sheet and Agency Project Approval	
Agency: Florida Department of Law Enforcement	Schedule IV-B Submission Date: October 15, 2020
Project Name: Uniform Arrest Affidavit	Is this project included in the Agency's LRPP? _____ Yes <u> X </u> No
FY 2021-22 LBR Issue Code: 36123C0	FY 2021-22 LBR Issue Title: Uniform Arrest Affidavit
Agency Contact for Schedule IV-B (Name, Phone #, and E-mail address): Ebony Tisby, 850-410-8860, EbonyTisby@fdle.state.fl.us	
AGENCY APPROVAL SIGNATURES	
I am submitting the attached Schedule IV-B in support of our legislative budget request. I have reviewed the estimated costs and benefits documented in the Schedule IV-B and believe the proposed solution can be delivered within the estimated time for the estimated costs to achieve the described benefits. I agree with the information in the attached Schedule IV-B.	
Agency Head: 	Date: 10/15/2020
Printed Name: Richard Swearingen	
Agency Chief Information Officer (or equivalent): 	Date: 10/15/2020
Printed Name: Joey Hornsby	
Budget Officer: 	Date: 10/14/2020
Printed Name: Cynthia Barr	
Planning Officer: 	Date: 10/14/2020
Printed Name: Sharon Wester	
Project Sponsor: 	Date: 10/14/2020
Printed Name: Charles Schaeffer	
Schedule IV-B Preparers (Name, Phone #, and E-mail address):	
Business Need:	Renee Strickland, 850-410-7100, ReneeStrickland@fdle.state.fl.us
Cost Benefit Analysis:	Danielle Rioux, 850-410-7245, DanielleRioux@fdle.state.fl.us

Technology Planning:	Ebony Tisby, 850-410-8860, EbonyTisby@fdle.state.fl.us
Project Planning:	Ebony Tisby, 850-410-8860, EbonyTisby@fdle.state.fl.us

II. Schedule IV-B Business Case – Strategic Needs Assessment

A. Background and Strategic Needs Assessment

Purpose: To clearly articulate the business-related need(s) for the proposed project

1. Business Need

The 2019 Legislative Session, through House Bill (HB) 7125 amended s. 900.05 and s.943.6871, Florida Statutes, requiring the Florida Department of Law Enforcement (FDLE) to establish a statewide uniform arrest affidavit. Currently, law enforcement agencies in Florida use different methods for collecting arrest data. Some agencies use paper arrest forms, and others have electronic mechanisms for collecting arrest data. The paper-based arrest process is inefficient and prolongs officers' time processing the arrestee. While there are similarities, each booking agency in Florida has different formats and collection requirements that must be used for arrests. The collection of arrest data is not standard across all agencies. This can create inconsistencies in collecting and reporting data for the Florida Incident-Based Reporting System (FIBRS) repository and Criminal Justice Data Transparency (CJDT) solution.

HB 7125 expanded upon the foundation the Florida Legislature created when it passed Senate Bill 1392 (SB1392) creating s. 900.05 and s. 943.6871, Florida Statutes, during the 2018 Legislative Session. SB 1392 required contributors to provide criminal justice data and statistics to FDLE as part of a Criminal Justice Data Transparency (CJDT) initiative. The legislation stipulates specific parameters concerning the data collections and directs FDLE to provide public access to the data. While associated in statute, CJDT is an independent project per the Project Management Institute standards.

The combined CJDT and UAA project has been separated for FY 21-22. The requirements of s.943.6871(1) through (9), F.S. are met through CJDT, and a separate budget request. The uniform arrest affidavit as defined in s.943.6871(10), F.S. is in this Schedule IV-B.

The initial scope of the uniform arrest affidavit project was to capture uniform data from arresting agencies about arrests that initiate a booking at a county detention facility. Bookings, sometimes called physical arrests, involve the transport of a subject to a county detention facility for processing. The processing includes the capture of biometric information like fingerprints, photos, and DNA. Working with both legislative staff and the criminal justice community, FDLE quickly identified the need for the uniform arrest affidavit to extend beyond the initial plan.

One extension is the need to capture consistent arrest information for non-physical arrests. These events are often called notice to appear (NTAs) in court, sworn complaints and/or criminal citations. During initial requirement gathering we learned that some jurisdictions have a single process for both physical arrests (bookings) and non-physical arrests (NTAs, etc.). In these jurisdictions, the inaugural arrest affidavit will meet the needs to capture arrest affidavits for physical and non-physical arrests. Other jurisdictions have different processes for non-physical arrests. To provide a comprehensive, uniform arrest affidavit in these jurisdictions will require detailed analysis to determine how to reasonably blend divergent local processes with the statewide uniform arrest affidavit.

Another critical extension is to capture data from the county detention booking process. Examples of booking data identified are the booking data and time, the booking officer, and booking identifiers (like the case, transaction and OBTS numbers). Demographic details of the subject not available at arrest, like marital status and tattoo descriptions could be captured. Additional information about juvenile referrals to DCF and into whose custody are juveniles released could be captured. These elements, and others like them, are discovered during the physical booking process. Much of this data is recorded in jail management systems today, but in a non-standard way. CJDT has assisted county detention facilities in standardizing some of these elements.

FDLE proposes a second phase of the uniform arrest affidavit project to expand consistent definitions to include booking elements needed to support CJDT. The data shared from the arresting agency can be augmented with booking information. This super-set of data benefits FDLE by supporting increased consistency in data. This will provide more standard elements documented in the technical specifications with which FDLE can expand the confidence in data

linking and visualization process.

Extending the process helps the Clerks of Court establish court case events in their case maintenance systems. Data created by the arresting agency can be augmented with booking information and shared with the judiciary and clerks. This automated, consistent data transmission will support case initiation for the clerks and the judiciary by providing an expedited and efficient option to establish a court case without manual data entry. Clerks with automated processes can use the enhanced data to build the court record with more relevant, error-free information. FDLE proposes to expand the uniform arrest affidavit project into FY 2022-23. The technical specification expansion will provide clerks the data needed for initiation of a criminal court case.

2. Business Objectives

- To provide an automated uniform arrest affidavit for all criminal justice agencies in the state of Florida, FDLE must support the following business objectives:
- Provide a state level repository to support the uniform arrest affidavit data collection from state and local law enforcement agencies.
- Automate the on-line collection of law enforcement agencies arrest data through the use of a standardized arrest affidavit.
- Support data element level sharing of appropriate, non-confidential data.
- Provide a method for law enforcement agencies to submit standardized arrest affidavit data.
- Support mobile client integration for arresting agencies.
- Provide a method to share data with other FDLE Criminal Justice Analytics data sources.
- Provide a method to share data between arresting agencies, state attorney or clerk of court systems.
- Provide a method to extend the data from arresting agencies, to include booking data needed for clerks of court to initiate a criminal court case.
- Perform data quality checks on received data to ensure it meets associated business rules and automate when applicable.
- Provide a mechanism for the law enforcement agencies to perform data review and approval through a secure interface.
- Comply with current and subsequent updates to state and national retention requirements.
- Provide training on the solution.
- Provide the ability to audit all transactions and generate audit reports.
- Eliminate manual and/or obsolete processes in the collection of data, formatting/reformatting of data, generation of statistics and reports, maintenance of agency information and points of contact, data review, and data approval.
- Consolidate and streamline data submission from state and local agencies to state and local data repositories.

B. Baseline Analysis

1. Current Business Process(es)

Purpose: To establish a basis for understanding the business processes, stakeholder groups, and current technologies that will be affected by the project and the level of business transformation that will be required for the project to be successful.

The creation of s. 900.05 and s.943.6871, Florida Statutes directs FDLE to provide new services. FDLE currently has many processes that coordinate data submission from other local and state agencies, data processing, and publication. These submissions occur for data that enters the repository of computerized criminal history records (CCH), the Uniform Crime Reports (UCR) program, and the Sexual Offender and Predator Registry (SOPR). Current processes are outlined as follows:

CCH

The clerks of court, county detention facilities, and the Florida Department of Corrections provide some of the specified data to FDLE's CCH files which serve as the State's criminal history repository. The submitted data updates the criminal history records after passing through rigorous data matching processes to ensure the data are associated with the correct person's record. The CCH system has internal error checks and verifications to ensure data integrity and validity. By statute CCH data is not public, therefore limited summaries of arrest data are currently represented on FDLE's website. They are displayed in as an aggregate as trends, presented in a graphical form, and compared to Florida's UCR incident trends for similar crime types.

UCR

Summary data are currently submitted to FDLE by over 400 local and state agencies twice annually for UCR Offenses and Arrests that have occurred for the specified period. Agencies may upload text files into the UCR Input System, or may individually enter data directly into the system. Submissions for seven segments are required, including Arrest, Offense, Property, Weapon, Domestic Violence, Arson, and Motor Vehicles and two segments are optional, including Law Enforcement Officers Killed and Assaulted and Supplemental Homicide Reports. The UCR Input System has internal quality checks and verifications.

Florida compiles, reports, and publishes data semi-annually that display aggregated counts for the semi-annual (January through June) and annual (January through December) reporting cycles. The data is currently summarized by total offense counts by crime type and unique crime type characteristics on annual basis. Arrest totals for each crime are also available with counts by County, Age and Sex, and Judicial Circuit. (FIBRS will replace this reporting.)

SOPR

Florida sexual offenders and predators are required to register quarterly or biannually, based on their registration requirements. FDLE receives data about individuals who have registered as a sexual offender or predator on a daily basis from over 400 local and state agencies and the Department of Highway Safety and Motor Vehicles. Data are transmitted to FDLE via text file, which is validated and uploaded into the Sexual Offender and Predator Database. Florida's Sexual Offenders and Predators database is freely available and searchable online.

Other Published Data

FDLE has other searchable databases currently available to the public online including the Public Access System (PAS) <http://pas.fdle.state.fl.us/pas/restricted/PAS/home/home.jsf>). In addition, the Florida Department of Corrections offers their searchable Corrections Offender Network to the public online (<http://www.dc.state.fl.us/offendersearch/>).

Other Data Distribution by FDLE

Criminal History Record Checks

A full criminal history may be requested for an individual through FDLE's criminal history record check service and is subject to a fee. These data are not otherwise published or publicly available.

Privacy and Security Agreements

Limited individual criminal history information may be provided under certain restrictions based on s. 943.057, Florida Statutes and Rule 11C-6.005, Florida Administrative Code. Researchers may request criminal history information only for research and statistical purposes as part of a Privacy and Security Agreement with FDLE. These data are limited to as little criminal history information as possible to fulfill the request, and researchers must follow definitive rules to ensure the protection of the data provided. Such requests are subject to a fee.

Public Records Requests

Limited arrest and court information may be provided under certain restrictions based on s. 119, Florida Statutes. Individuals requesting data based on the Public Records law receive aggregated counts from CCH or UCR based on their specific request. Requests are subject to a fee.

2. Assumptions and Constraints

Assumptions

The following assumptions relate to the uniform arrest affidavit:

- The solution must have “high-availability.”
 - The solution will standardize common data with the FIBRS and CJDT solutions.
 - Detailed requirements need to be documented before moving forward with the project.
 - The solution will ensure data element level sharing of appropriate, non-confidential data.
 - The system will comply with state of Florida and FBI CJIS Security Policy.
 - Contributors will make data available in a format supported by the CJDT database.
- Implementation of a uniform arrest affidavit will improve the quality of the CJDT data.

Constraints

The following constraints relate to the uniform arrest affidavit:

- The data required include both Personally Identifiable Information (PII) and Criminal Justice Information (CJI) which must both be protected and managed according to CJIS Security Policies in motion and at rest.
- Florida’s CJIS Council must approve the uniform arrest affidavit elements.
- Submissions to FDLE must include standard data element names, standard business rules, and standard format of data collection.
- FDLE must develop methods for archiving data, retrieving archived data, and data editing and verification.

C. Proposed Business Process Requirements

1. Process Requirements

Purpose: To establish a basis for understanding what business process requirements the proposed solution must meet in order to select an appropriate solution for the project.

FDLE is required by s.943.687, F.S. to procure a uniform arrest affidavit solution and establish guidelines for a statute crosswalk table. The following are high-level requirements for the uniform arrest affidavit.

- 1) Establish a uniform arrest affidavit database and an interface to receive and store arrest data
- 2) Develop a test environment for verifying system functionality and agency connectivity
- 3) Establish requirements on how entities submit data through the application programming interface
- 4) Establish rules on how the data will be compiled, processed, structured, used, or shared
- 5) Develop methods for data editing and verification
- 6) Test data quality for accuracy, validity, reliability, and completeness
- 7) Develop methods and rules for archiving and retrieving archived data.
- 8) Provide 24/7/365 support

2. Business Solution Alternatives

Per s. 943.6871, F.S., FDLE must procure a solution.

3. Rationale for Selection

FDLE applied several criteria to compare alternatives and recommend a business solution that best meets the business and strategic needs of the agency, as well as state and local agency stakeholders.

These criteria include:

- Initial and future workload for required entities
- Support for multiple data sets used by the state
- Ability to automate or streamline data collection processes
- Ability to disseminate crime data to the public and stakeholders
- Impact to data systems of submitting entities
- Impact to FDLE Information Technology Services and systems
- Costs

4. Recommended Business Solution

For the uniform arrest affidavit, per s. 943.6871, F.S., FDLE must procure a solution.

D. Functional and Technical Requirements

Purpose: To identify the functional and technical system requirements that must be met by the project.

Data Collection and Storage

For the uniform arrest affidavit, FDLE must:

- Procure a solution to collect arrest and offense data per the technical specifications
- Provide automated data quality checks on the data received per the business rules
- Provide reporting capabilities on all data housed within the solution
- Provide an interface to the FDLE's statute management module
- Provide user management capability for uniform arrest affidavit users
- Meet state and federal CJIS security policy, standards, and requirements
- Provide a mechanism for external systems/agencies to exchange data and expand to additional systems in the future
- Provide high availability for the uniform arrest affidavit solution

III. Success Criteria

Purpose: To identify the critical results, both outputs and outcomes, that must be realized for the project to be considered a success.

SUCCESS CRITERIA TABLE				
#	Description of Criteria	How will the Criteria be measured/assessed?	Who benefits?	Realization Date (MM/YY)
1	Leverage new technology	Use of standards such as web services and open data platform	FDLE Local and state agencies/officials Public	FY 2021-2022
2	Consistent collection, linkage, and reporting of criminal justice data from multiple data owners	Definitions of identified data elements for use by all agencies	FDLE Local and state agencies/officials State policymakers Public	FY 2022-2023
3	Implement the uniform arrest affidavit statewide	State and local arresting agencies throughout Florida are using the uniform arrest affidavit	FDLE Local and state agencies/officials	FY 2021-2022

IV. Schedule IV-B Benefits Realization and Cost Benefit Analysis

A. Benefits Realization Table

Purpose: To calculate and declare the tangible benefits compared to the total investment of resources needed to support the proposed IT project.

BENEFITS REALIZATION TABLE					
#	Description of Benefit	Who receives the benefit?	How is benefit realized?	How is the realization of the benefit measured?	Realization Date (MM/YY)
1	Automated submission processes and availability of information as defined by law	Criminal Justice Agencies; State and Local Policymakers; State and Local governments; FDLE; Public.	Data is collected in an automated process, analyzed, and published in open data platform	Implementation of new methods for receiving and publishing of open data.	FY 2021-2022
2	Implemented automated state-wide uniform arrest	Criminal Justice	Data collected uniformly and	State and local arresting agencies	FY2021-

SCHEDULE IV-B FOR UNIFORM ARREST AFFIDAVIT

BENEFITS REALIZATION TABLE					
#	Description of Benefit	Who receives the benefit?	How is benefit realized?	How is the realization of the benefit measured?	Realization Date (MM/YY)
	affidavit	Agencies; FDLE.	electronically from all arresting agencies can standardize business processes and reduce local training costs	throughout Florida are using the uniform arrest affidavit	2022
3	Extended the uniform arrest affidavit data collection to include court case initiation	Criminal Justice Agencies; State and Local governments; FDLE.	Data collected uniformly, electronically, and consistently	Agencies throughout Florida are using the uniform arrest affidavit through the booking and court case initiation process	FY2022-2023

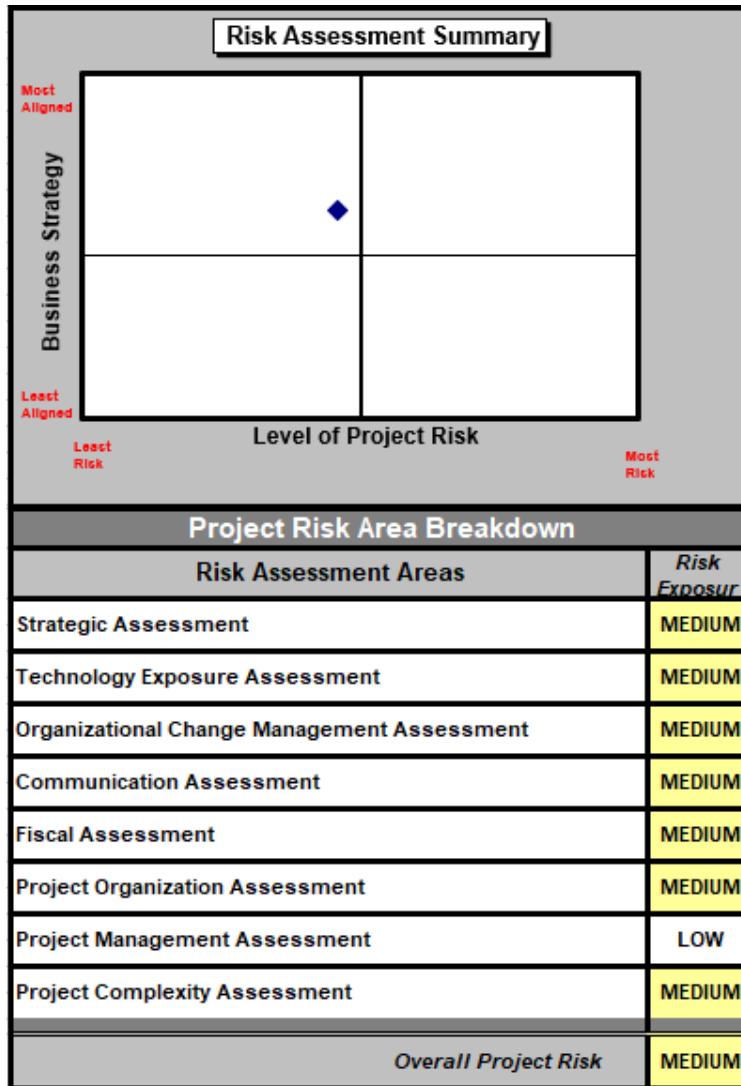

B. Cost Benefit Analysis (CBA)

Purpose: To provide a comprehensive financial prospectus specifying the project’s tangible benefits, funding requirements, and proposed source(s) of funding.

Cost Benefit Analysis spreadsheets are in Appendix C.

V. Schedule IV-B Major Project Risk Assessment

Purpose: To provide an initial high-level assessment of overall risk incurred by the project to enable appropriate risk mitigation and oversight and to improve the likelihood of project success. The risk assessment summary identifies the overall level of risk associated with the project and provides an assessment of the project’s alignment with business objectives.

VI. Schedule IV-B Technology Planning

A. Current Information Technology Environment

Purpose: To ensure there is close alignment with the business and functional requirements and the selected technology.

1. Current System

a. Description of Current System

The Florida Department of Law Enforcement does not have a current established business process for this system. These are new requirements for the Department.

b. Current System Resource Requirements

Not applicable

c. Current System Performance

Not applicable

2. Information Technology Standards

See attached appendix F for FDLE information technology standards. When applicable, FDLE's information technology standards are followed. Additional requirements are listed below.

- Requirements of Florida Statutes sections 282.318, 501.171, 775.085, 812.014, 815.06, 817.568, 847.0135, 847.0137, 847.0138, 847.0139, 877.19, 900.05, 943.05, 943.051, 943.053, 943.054, 943.0544, 943.6871, and Chapters 119, 815, 817 Part II, 934, in addition to a variety of other statutes detailing background screening requirements, which describe FDLE's duties as the State's central repository for criminal record information and gateway to the Federal repository.
- NIEM 4.2 (or current version)

B. Current Hardware and/or Software Inventory

Not applicable.

C. Proposed Technical Solution

1. Technical Solution Alternatives

Per s. 943.6871, F.S., FDLE must procure a solution. Other alternatives were not evaluated.

2. Rationale for Selection

FDLE applied several criteria to compare alternatives and recommend a business solution that best meets the business and strategic needs of the agency, as well as state and local agency stakeholders.

These criteria include:

- Initial and future workload for required entities
- Support for multiple data sets used by the state
- Ability to automate or streamline data collection processes
- Ability to disseminate crime data to the public and stakeholders
- Impact to data systems of submitting entities
- Impact to FDLE IT services and systems
- Costs

3. Recommended Technical Solution

For the uniform arrest affidavit, per s. 943.6871, F.S. FDLE must procure a solution. FDLE identified a vendor and established a contract on February 14, 2020. In 2020-21 FDLE submitted a single funding request for CJDT and the uniform arrest affidavit. FDLE received the initial funding request, but submitted an amended request after the vendor contract was signed and the actual costs were identified. This amended budget request was not adopted. This resulting shortfall caused FDLE to suspend the uniform arrest affidavit portion of the vendor contract, allowing FDLE and local agencies to continue with CJDT objectives. Proposed Solution Description

The uniform arrest affidavit solution will leverage technology from the Florida Incident-Based Reporting System (FIBRS) project by utilizing a standard technical specification that will streamline the submission of data to FDLE. This will have the added benefit of reducing the need for multiple repositories. Independently implementing a uniform arrest affidavit will significantly increase the cost for FDLE and data contributors.

D. Proposed Solution Description

1. Summary Description of Proposed System

Within the vendor contract, contributors have two options to submit the data elements. First, agencies can submit XML transactions through the Florida CJIS Portal to the system. Second, agencies can manually enter the arrest affidavit data through the user interface (UI).

System Type

System will include an application server, web server, mobile client, and a database server, with a web-based interface. Operating system, database management system, storage, programming language, etc. was determined based on negotiation between FDLE and the vendor selected.

Connectivity

The uniform arrest affidavit will leverage existing and newly defined data feeds from state and local agencies over secure connections. These connections were established as part of the FIBRS project.

Security, Privacy, Confidentiality, Access

These standards will be the same as the current security standards used by FDLE. Since data will contain personally identifiable information, data controls will be established to ensure that access to sensitive data is restricted to appropriate personnel.

Development and Procurement Approach

To realize the business solution, FDLE will procure a commercially available system that can be customized to meet FDLE's business requirements. The contracted system will include, but not limited to:

- Project management services
- Software customization services
- Data analysis services
- System integration and testing services
- Implementation and configuration
- Support services
- Training services

Maturity and Life Expectancy of the Technology

FDLE will procure a mature solution, with customizable functionality to accommodate the business need. The vendor solution shall be flexible to facilitate future changes and upgrades as applicable.

2. Resource and Summary Level Funding Requirements for Proposed Solution (if known)

Anticipated project costs for the uniform arrest affidavit are summarized in the table below:

Title:	Uniform Arrest Affidavit				
Tracking #:	TBD				
Customer:	Criminal Justice Information Services				
Manager:	David Gillespie				
Planned Start:	7/1/2019		Planned Finish:	6/30/2022	
Duration (mos):	36.5				
Baseline Date:	10/1/2018				
Revision Date:	10/8/2020		Version #:	2.0	

Project Budget	Actual	Planned	Planned	Planned	
Cost Elements	FY 19/20	FY 20/21	FY 21/22	FY 22/23	Totals
OCO	\$0	\$0	\$0	\$0	\$0
Contract Services					
Contract Staff	\$147,879	\$92,995	\$582,400	\$582,400	\$1,405,674
Project Deliverables	\$114,000	\$0	\$6,011,000	\$3,125,000	\$9,250,000
Other IT Services	\$0	\$0	\$231,801	\$151,364	\$383,165
Other	\$3,599	\$1,513	\$18,372	\$59,292	\$82,776
Total	\$402,368	\$380,740	\$7,122,149	\$4,449,636	\$12,354,893

Maintenance Budget	Actual	Planned	Planned	Planned	
Cost Elements	FY 19/20	FY 20/21	FY 21/22	FY 22/23	Totals
Maintenance Expenses	\$2,500	\$184,754	\$547,727	\$547,727	\$1,282,708
Contracted Services Maintenance	\$0	\$0	\$300,000	\$720,000	\$1,020,000
Total	\$2,500	\$184,754	\$847,727	\$1,267,727	\$2,302,708

E. Capacity Planning
(historical and current trends versus projected requirements)

The uniform arrest affidavit solution does not have historical data and needs to meet the annual capacity requirements. The annual number of physical arrests, also known as bookings, in Florida for the past five years is listed below.

- o 2014 – 867,084
- o 2015 – 773,174
- o 2016 – 726,496
- o 2017 – 711,831
- o 2018 – 716,653

Using the last five years as a basis for estimating the uniform arrest affidavit capacity, the capacity for 10 years would be 7.6 million. However, growth in Notice to Appear (not physical bookings) is expected to increase the number of arrests. Factoring in a 2% growth and growth for Notice to Appear records the estimated capacity for the uniform arrest affidavit is 8 million.

VII. Schedule IV-B Project Management Planning

Purpose: To require the agency to provide evidence of its thorough project planning and provide the tools the agency will use to carry out and manage the proposed project. The level of detail must be appropriate for the project's scope and complexity.

FDLE prepared a Project Management Plan for the implementation of the uniform arrest affidavit solution. This plan includes:

Project Phasing Plan and Scope

This project consists of three high-level phases: detailed planning, procurement/contracting, and implementation

and deployment.

Phase 1 - Detailed Planning

The detailed planning phase involves designing and developing the system technical specification and technical requirements, assembling the project team, and establishing mechanisms for FDLE to collaborate with state and local agencies and with vendors. The CJJIS Council approved the technical specifications for the uniform arrest affidavit solution.

Phase 2 - Contracting

This phase of the project includes obtaining funding and statutory approvals to move forward with procurement process. The specifications and requirements developed during the detailed planning phase will be used to develop the procurement for the uniform arrest affidavit solution. FDLE procured a vendor(s) commercial product. The contract was executed February 14, 2020. Through the negotiation the actual costs were identified and an amended budget request for 2020-21 was presented, but was not adopted. This resulting shortfall caused FDLE to suspend the uniform arrest affidavit portion of the vendor contract.

Phase 3 - Implementation and Deployment

The implementation and deployment phase started as soon as the technical specification and requirements are available and the competitive procurement was complete. In addition, FDLE started development of a test plan and various documentation and software tools to simplify development and testing of products. These tasks are suspended pending funding availability.

Baseline Schedule

The contract schedule can be found in Appendix E. This schedule is not current and will be updated after funding is available.

Project Organization

The UAA project requires coordination and management of a skilled project staff consisting of technical, functional, and administrative staff, mixed with contract staff and task-specific vendors.

The UAA project organization consists of the Project Steering Committee (PSC), the Project Manager (PM), and the Project Team. FDLE SME's and a number of other groups provide additional support. Each group performs a particular role for the project and is comprised of members of ITS, CJIS, and FDLE leadership.

FDLE Project Steering Committee (PSC)

The PSC approves deliverables and change requests for the project. Members of the PSC include Criminal Justice Information Services and Information Technology Services.

Project Manager

The PM is responsible for the overall management and coordination of the work effort and successful completion of the project. The PM monitors the day-to-day status of project team efforts. This includes establishing and maintaining the project management plan, assigning, directing, and monitoring the work of project staff, serving as FDLE's primary point of contact for the prime contractor, managing issues and risks, monitoring and reporting project status, and reviewing contract deliverables prior to delivery to the PSC for approval.

Project Team

The Project Team consists of a core group of FDLE members responsible for the day-to-day tasks associated

with the project. This team will be comprised largely of members of Criminal Justice Information Services, Information Technology Services and any other positions (FTE or Contract) deemed necessary for the successful completion of the project. The Project Team is creating a Resource Plan which defines all resources for the project including all positions deemed necessary.

Contract Manager

As a member of the Project Team, the Contract Manager is responsible for gathering the necessary information for developing the statement of work (SOW) and other contracting vehicles, monitoring the award of those contracts, ensuring performance delivery as required by the contract and closing out contracts when the tasks are completed. The Contract Manager works closely with FDLE contract and legal members to ensure that all work is accomplished within State and FDLE contracting rules and guidelines. The Contract Manager will coordinate budget issues and maintain awareness of all expenditures and accounts payable.

FDLE Implementation and Transition Unit (ITU)

Workgroups assist the Project Team in ensuring the uniform arrest affidavit meets the operational needs. SMEs, representatives from business operations, and IT will be assigned to the project. The unit will be responsible for implementation and transition as well as for stakeholder and customer communication, education/training, preparation and readiness for the new technology. They will evaluate existing policies and determine whether modifications are needed, or if new policies need to be created, to mitigate privacy or other risks related to new services and business processes.

The ITU will serve as the conduit through which user community stakeholders and program personnel communicate, ensuring the resulting services are compliant with the mission. This includes policy identification/coordination for new services, questions for the record, and public inquires. This project will require extensive coordination with contributors as they make modifications to their systems to become compliant with state specifications. ITU members are housed in the Criminal Justice Analytics Bureau.

Quality Assurance Plan

The focus of the quality management process is to build effective processes that enable the production of high quality deliverables that meet the specified business requirements. The quality management procedure consists of two principal processes: Quality Assurance (QA) and Quality Control (QC).

Quality Assurance

QA is the practice of adhering to planned, established and systematic approaches designed to ensure the high caliber of the deliverables and the detection and correction of any errors. It provides information about a common set of guidelines and standards to be applied by the Project Team. The primary aspect of a QA review is to ensure that the processes established for the project are being followed. If new processes are required, a group will be formed to establish the quality procedure. The benefits of following quality assurance processes include the following:

- Improved communication
- Improved planning and requirement gathering/definition processes
- Improved development process
- Improved product quality
- Better criteria for hardware and software testing
- Easier transition to production for hardware and software

The most effective QA activity is a formal QA review. The Project Team and PSC will conduct these reviews of project processes. Using results generated by this review, the PM will direct follow-up actions to ensure

that the project uses sound processes. Additionally the PSC will advise the PM of any observed deficiencies in processes and the PM will take corrective action to resolve the deficiency in the future.

Quality Control

QC activities are those focused on the inspection and/or testing of the deliverable produced. The QC Team will verify that the deliverables are of acceptable quality and that they are technically accurate. QC is the responsibility of the Project Team and the PM or Task Lead responsible for a deliverable. The PM will monitor the activities associated with the acceptance of deliverables. QC is conducted before a deliverable is submitted as final to be approved by the PM. The Project Manager is responsible for developing and maintaining a Quality Plan. The Quality Plan will document major deliverables of the project, completeness and correctness criteria, quality control activities and quality assurance activities.

Topics Addressed in the Quality Plan:

Quality Control activities associated with project deliverables:

- Document Deliverables
- Hardware and Software Deliverables
- Service Deliverables

Quality Assurance activities:

- QA processes (Requirements Traceability, Testing, Data Migration, etc.)
- Responsibility for QA processes

Quality Metrics for the project such as:

- Changes in Scope
- Changes to Schedule
- Changes in Cost
- Number and Type of Issues
- Number and Type of Defects
- Preparedness of customer to assume production responsibilities
- Preparedness of IT to assume production responsibilities
- Solution "Fitness for Use"

System testing and operational acceptance testing will be the primary QC processes used to assure that deliverables meet FDLE's documented requirements. System testing will involve specific testing and measurement at a technical level to verify compatibility, usability, performance, accuracy, and content of results.

External Project Oversight

Criminal and Juvenile Justice Information Systems (CJJIS) Council

The CJJIS Council was created by section 943.08, F.S., with the purpose to develop and implement a statewide strategy for identification, sharing, and coordination of criminal and juvenile justice data among federal, state and local criminal justice agencies. The Council is comprised by 14 members, consisting of representatives from the Attorney General, State Attorneys, Department of Law Enforcement, Department of Corrections, Parole Commission, Department of Juvenile Justice, Department of Highway Safety and Motor Vehicles, Public Defenders and the Office of State Court Administrators. The Governor of Florida appoints two sheriffs, two police chiefs, and one clerk of court to the Council. With this broad representation of the criminal justice community, all issues receive a full and fair hearing from all perspectives.

Change Management

Change management occurs throughout the lifecycle of the project. A change can be related to any facet of the project – scope creep, schedule revision, funding / cost changes, team / resource changes, issues and risks, etc.

If the change is minor, the PM may determine that the change can be met within current project parameters and the formal change process is not necessary. If the change could impact requirements, deliverables, payment schedule, cost, or completion date of a major milestone, the PM (or team member assigned) will fully research the impact of the project change and formulate a resolution. The PM will complete a formal Project Change Request form and present the change to the PSC.

The PSC will determine if the proposed change should be approved. Members of the PSC will signify approval or disapproval of a proposed project change by signing the Project Change Request form.

If the Project Steering Committee or FDLE Leadership (Assistant Commissioner, Director of CJIS, Director of Business Support, and the Chief Information Officer) determines that the approved project change will require a Contract Amendment, the PM will work with the vendor to prepare the Contract Amendment for the PSC’s review and approval. The contract amendment will then be processed according to FDLE contract procedures.

Communications Plan

The PM developed a Communications Plan to provide a framework for addressing communications with project stakeholders. The Communications Plan outlines a comprehensive strategy of both communicating project and process change information to the stakeholders as well as receiving and processing input/feedback from stakeholders. The Communication Plan identifies communication strategies which will be used to target the different audience groups (users, stakeholders, advisors, decision-makers, etc.) via an assortment of communication methods (Internet and email, formal and informal documents, multi-media presentations, and face-to-face meetings). This document serves as the core of the change management effort and will be updated throughout the life of the project.

The Project Manager is responsible for developing and maintaining a Communication Management Plan. This plan will document how and in what format information will be communicated, when and where communication will be made, and who is responsible for providing each type of communication.

Topics included in the Communication Management Plan:

1. Target Audience - Identification of all possible audience groups in as much detail as possible:
 - Specific stakeholder groups
 - Data contributors
 - Project Team
 - Project Steering Committee
 - FDLE management
 - FDLE customers
 - Legislature and Cabinet
 - Oversight agencies

2. Communication Method Communications may be formal, such as status reports, Operational Work Plans, newsletters, and quarterly meetings or informal such as notices or announcements

through email or website. Communications may also be in written form or face-to-face. Examples include such things as:

- Status reports
- Operational Work Plans
- Stakeholder /customer surveys
- Project and program newsletters
- Project and program websites
- Ad Hoc notices
- Project Steering Committee meetings
- Project Team meetings
- FDLE Executive Leadership briefs

3. Method of Delivery - Methods of delivery could be such things as:

- Emails
- Presentations
- Reports
- Websites
- Documents (electronic or paper)
- Meetings

4. Frequency

Some communications could be set at regular intervals such as meetings or reports required annually, quarterly, biweekly, etc. or upon specific project milestone or phase timelines according to project needs. Some communication could also be random and event-specific such as notices dealing with specific issues.

5. Responsibility

Each type of communication must be assigned to the PM or a specific member of the Project Team.

Risk Management

The Risk Management Plan describes the plan to manage risks throughout the life of the project. A risk refers to future conditions or circumstances, which will have an adverse impact on the project if they occur, that exist outside of the control of FDLE or the Project Team. In other words, a risk is a potential future problem. Risk management is performed continually over the life of the project. Risk management includes the following:

- Step 1: Identify major risks to project success
- Step 2: Assess the potential impact of each risk and its probability of occurrence
- Step 3: Determine appropriate contingency plans
- Step 4: Determine the acceptable level of tolerance for each risk
- Step 5: Specify mitigation strategies to be implemented for critical risks
- Step 6: Periodically review the effectiveness of mitigation strategies and identify any new risks.

Risk identification occurs throughout the life of the project. Any project stakeholder, Project Team member, customer or contractor can submit a risk at any time. A risk mitigation session is conducted at the start of each build or phase. The PM will manage the FDLE risk documents which is one of the artifacts maintained throughout the life of the project. Distribution of the risk document will be agreed upon between the FDLE and the vendor

PM at the beginning of the engagement. The risk document will be an electronic document and available to the Project Team and PSC at all times during the project.

The PM (in consultation with the PSC) evaluates the risk and recommends a risk level. The risk level is used to set the priority of the risk and determine how risks should be addressed.

Risk management includes an ongoing cycle of risk identification, analysis and monitoring. Each risk with a risk level of medium or high is evaluated to determine if the impact is severe enough that a risk mitigation plan should be created. If a risk mitigation plan is required, the risk is investigated to determine whether or not the resolution of a risk causes the budget, personnel, scope or schedule to change. In the event a risk mitigation plan must be exercised, project change control processes will be used (if necessary) and activities associated with the risk mitigation plan will be added to the Project Schedule to ensure the work is completed. The PM monitors all risk mitigation plans to ensure they are being executed successfully.

Implementation Plan

The project will utilize an implementation plan for deploying the solution to the projection environment. The implementation plan identifies all activities required for successful deployment(s) of the solutions for production use. The implementation plan will include:

- Implementation Plan (Step-by-step instructions)
- Go-live Schedule
- Implementation Approvals
- Implementation Communication Plan
- Dependencies
- Resource Requirements
- Failback Plan
- Post-Implementation Tasks

VIII. Appendices

Appendix A – Standards and Definitions

Appendix B – Project Risk Assessment

Appendix C – Cost Benefit Analysis

Appendix D – Estimated Project Budget

Appendix E – Estimated Project Schedules

Appendix F – Information Technology Standards

Appendix A– Standards and Definitions

1. 28 Code of Federal Regulations Part 20 (28 CFR Part 20)

These regulations are in place to assure that criminal history record information, wherever it appears, is collected, stored, and disseminated in a manner to ensure the accuracy, completeness, currency, integrity, and security of such information and to protect individual privacy.

2. Chapter 74-2, F.A.C. the State of Florida Cybersecurity Standards (FCS)

<https://www.flrules.org/gateway/ruleNo.asp?id=74-2.001>

3. Department of Justice (DOJ) Global Reference Architecture (GRA)

GRA enhances justice and public safety through a service-oriented approach to information sharing. It is accomplished by providing reference architecture with guidance for identifying, defining, implementing, and governing services.

GRA is an information exchange solution designed to cut 80 percent of implementation time and costs for state and local justice agencies through reuse of established promising practices in IT architecture and design.

4. FBI CJIS Security Policy(CSP)

The CJIS Security Policy provides guidance for the creation, viewing, modification, transmission, dissemination, storage, and destruction of CJIS data. This policy applies to every individual—contractor, private entity, noncriminal justice agency representative, or member of a criminal justice entity—with access to, or who operate in support of, criminal justice services and information.

5. FBI Electronic Biometric Transmission Specification (EBTS)

The FBI Criminal Justice Information Services Division is moving toward a system that will contain a complete biometric and biographic profile of the subject records in its databases. Although fingerprints will continue to be the FBI's primary mode of identification for the near future, the scope of the EBTS has been expanded over previous versions to include additional biometric modalities (e.g., palm print, facial, and iris) in recognition of the rapidly developing biometric identification industry. The most recent update to the American National Standards Institute /National Institute of Standards and Technology-Information Technology Laboratory 1-2011 standard (ANSI/NIST-ITL 1-2011) includes new record types to facilitate data sharing of new biometric modalities. Integrating biometric data in accordance with the ANSI/NIST standard, the FBI EBTS provides a description of all requests and responses associated with electronic fingerprint and other biometric identification services.

6. Global Federated Identity and Privilege Management (GFIPM)

The goal of GFIPM is to enable information sharing for state and local agencies through a federated model that is secure, scalable, and cost-effective. One of the guiding principles of GFIPM is to seek to understand and meet the needs of state and local agencies through a collaborative, consensus-based process that incorporates the input of all major stakeholders, including state and local agencies as well as the federal government.

7. Lightweight Directory Access Protocol (LDAP)/Active Directory

LDAP is an application protocol for accessing and maintaining distributed directory information services over an Internet Protocol (IP) network.

8. National Information Exchange Model (NIEM)

The National Information Exchange Model is a community-driven, government-wide, standards-based approach to exchanging information. NIEM connects communities of people who share a common need to exchange information in order to advance their mission.

Used in all 50 states and internationally, NIEM is available to everyone. It is a consistent starting point—which includes a data model, governance, training, tools, technical support services, and an active community—that assists users in adopting a standards-based approach to exchanging data.

When it matters most—protecting citizens, responding to disasters, monitoring prescription drug abuse, identifying welfare assistance eligibility, or providing support services to children and families—NIEM provides quick access to accurate, complete, and actionable information.

9. Security Assertion Markup Language (SAML)

SAML is an Extensible Markup Language (XML) based open standard data format for exchanging authentication and authorization data between parties, in particular, between an identity provider and a service provider.

10. United States Rehabilitation Act – Section 508 details accessibility standards for all systems

The Section 508 Standards are part of the Federal Acquisition Regulation (FAR) and address access for people with physical, sensory, or cognitive disabilities. They contain technical criteria specific to various types of technologies and performance-based requirements, which focus on functional capabilities of covered products. Specific criteria cover software applications and operating systems, web-based information and applications, computers, telecommunications products, video and multi-media, and self-contained closed products.

	B	C	D	E
1	Agency: Florida Department of Law Enforcement		Project: Uniform Arrest Affidavit	
3	Section 1 -- Strategic Area			
4	#	Criteria	Values	Answer
5	1.01	Are project objectives clearly aligned with the agency's legal mission?	0% to 40% -- Few or no objectives aligned	81% to 100% -- All or nearly all objectives aligned
6			41% to 80% -- Some objectives aligned	
7			81% to 100% -- All or nearly all objectives aligned	
8	1.02	Are project objectives clearly documented and understood by all stakeholder groups?	Not documented or agreed to by stakeholders	Informal agreement by stakeholders
9			Informal agreement by stakeholders	
10			Documented with sign-off by stakeholders	
11	1.03	Are the project sponsor, senior management, and other executive stakeholders actively involved in meetings for the review and success of the project?	Not or rarely involved	Project charter signed by executive sponsor and executive team actively engaged in steering committee meetings
12			Most regularly attend executive steering committee meetings	
13			Project charter signed by executive sponsor and executive team actively engaged in steering committee meetings	
14	1.04	Has the agency documented its vision for how changes to the proposed technology will improve its business processes?	Vision is not documented	Vision is partially documented
15			Vision is partially documented	
16			Vision is completely documented	
17	1.05	Have all project business/program area requirements, assumptions, constraints, and priorities been defined and documented?	0% to 40% -- Few or none defined and documented	81% to 100% -- All or nearly all defined and documented
18			41% to 80% -- Some defined and documented	
19			81% to 100% -- All or nearly all defined and documented	
20	1.06	Are all needed changes in law, rule, or policy identified and documented?	No changes needed	No changes needed
21			Changes unknown	
22			Changes are identified in concept only	
23			Changes are identified and documented	
24			Legislation or proposed rule change is drafted	
25	1.07	Are any project phase or milestone completion dates fixed by outside factors, e.g., state or federal law or funding restrictions?	Few or none	All or nearly all
26			Some	
27			All or nearly all	
28	1.08	What is the external (e.g. public) visibility of the proposed system or project?	Minimal or no external use or visibility	Extensive external use or visibility
29			Moderate external use or visibility	
30			Extensive external use or visibility	
31	1.09	What is the internal (e.g. state agency) visibility of the proposed system or project?	Multiple agency or state enterprise visibility	Multiple agency or state enterprise visibility
32			Single agency-wide use or visibility	
33			Use or visibility at division and/or bureau level only	
34	1.10	Is this a multi-year project?	Greater than 5 years	Between 1 and 3 years
35			Between 3 and 5 years	
36			Between 1 and 3 years	
37			1 year or less	

	B	C	D	E
1	Agency: Florida Department of Law Enforcement		Project: Uniform Arrest Affidavit	
3	Section 2 -- Technology Area			
4	#	Criteria	Values	Answer
5	2.01	Does the agency have experience working with, operating, and supporting the proposed technical solution in a production environment?	Read about only or attended conference and/or vendor presentation	Supported prototype or production system less than 6 months
6			Supported prototype or production system less than 6 months	
7			Supported production system 6 months to 12 months	
8			Supported production system 1 year to 3 years	
9			Installed and supported production system more than 3 years	
10	2.02	Does the agency's internal staff have sufficient knowledge of the proposed technical solution to implement and operate the new system?	External technical resources will be needed for implementation and operations	External technical resources will be needed for implementation and operations
11			External technical resources will be needed through implementation only	
12			Internal resources have sufficient knowledge for implementation and operations	
13	2.03	Have all relevant technical alternatives/ solution options been researched, documented and considered?	No technology alternatives researched	Some alternatives documented and considered
14			Some alternatives documented and considered	
15			All or nearly all alternatives documented and considered	
16	2.04	Does the proposed technical solution comply with all relevant agency, statewide, or industry technology standards?	No relevant standards have been identified or incorporated into proposed technology	Proposed technology solution is fully compliant with all relevant agency, statewide, or industry standards
17			Some relevant standards have been incorporated into the proposed technology	
18			Proposed technology solution is fully compliant with all relevant agency, statewide, or industry standards	
19	2.05	Does the proposed technical solution require significant change to the agency's existing technology infrastructure?	Minor or no infrastructure change required	Minor or no infrastructure change required
20			Moderate infrastructure change required	
21			Extensive infrastructure change required	
22			Complete infrastructure replacement	
23	2.06	Are detailed hardware and software capacity requirements defined and documented?	Capacity requirements are not understood or defined	Capacity requirements are based on historical data and new system design specifications and performance requirements
24			Capacity requirements are defined only at a conceptual level	
25			Capacity requirements are based on historical data and new system design specifications and performance requirements	

	B	C	D	E
1	Agency: Florida Department of Law Enforcement		Project: Uniform Arrest Affidavit	
3	Section 3 -- Organizational Change Management Area			
4	#	Criteria	Values	Answer
5	3.01	What is the expected level of organizational change that will be imposed within the agency if the project is successfully implemented?	Extensive changes to organization structure, staff or business processes	Minimal changes to organization structure, staff or business processes structure
6			Moderate changes to organization structure, staff or business processes	
7			Minimal changes to organization structure, staff or business processes structure	
8	3.02	Will this project impact essential business processes?	Yes	No
9			No	
10	3.03	Have all business process changes and process interactions been defined and documented?	0% to 40% -- Few or no process changes defined and documented	41% to 80% -- Some process changes defined and documented
11			41% to 80% -- Some process changes defined and documented	
12			81% to 100% -- All or nearly all processes defined and documented	
13	3.04	Has an Organizational Change Management Plan been approved for this project?	Yes	Yes
14			No	
15	3.05	Will the agency's anticipated FTE count change as a result of implementing the project?	Over 10% FTE count change	Less than 1% FTE count change
16			1% to 10% FTE count change	
17			Less than 1% FTE count change	
18	3.06	Will the number of contractors change as a result of implementing the project?	Over 10% contractor count change	Less than 1% contractor count change
19			1 to 10% contractor count change	
20			Less than 1% contractor count change	
21	3.07	What is the expected level of change impact on the citizens of the State of Florida if the project is successfully implemented?	Extensive change or new way of providing/receiving services or information)	Extensive change or new way of providing/receiving services or information)
22			Moderate changes	
23			Minor or no changes	
24	3.08	What is the expected change impact on other state or local government agencies as a result of implementing the project?	Extensive change or new way of providing/receiving services or information	Extensive change or new way of providing/receiving services or information
25			Moderate changes	
26			Minor or no changes	
27	3.09	Has the agency successfully completed a project with similar organizational change requirements?	No experience/Not recently (>5 Years)	Recently completed project with greater change requirements
28			Recently completed project with fewer change requirements	
29			Recently completed project with similar change requirements	
30			Recently completed project with greater change requirements	

	B	C	D	E
1	Agency: Agency Name		Project: Project Name	
3	Section 4 -- Communication Area			
4	#	Criteria	Value Options	Answer
5	4.01	Has a documented Communication Plan been approved for this project?	Yes	Yes
6			No	
7	4.02	Does the project Communication Plan promote the collection and use of feedback from management, project team, and business stakeholders (including end users)?	Negligible or no feedback in Plan	Routine feedback in Plan
8			Routine feedback in Plan	
9			Proactive use of feedback in Plan	
10	4.03	Have all required communication channels been identified and documented in the Communication Plan?	Yes	Yes
11			No	
12	4.04	Are all affected stakeholders included in the Communication Plan?	Yes	Yes
13			No	
14	4.05	Have all key messages been developed and documented in the Communication Plan?	Plan does not include key messages	Some key messages have been developed
15			Some key messages have been developed	
16			All or nearly all messages are documented	
17	4.06	Have desired message outcomes and success measures been identified in the Communication Plan?	Plan does not include desired messages outcomes and success measures	Plan does not include desired messages outcomes and success measures
18			Success measures have been developed for some messages	
19			All or nearly all messages have success measures	
20	4.07	Does the project Communication Plan identify and assign needed staff and resources?	Yes	Yes
21			No	

B		C		D		E	
1	Agency: Florida Department of Law Enforcement			Project: Uniform Arrest Affidavit			
3	Section 5 -- Fiscal Area						
4	#	Criteria	Values			Answer	
5	5.01	Has a documented Spending Plan been approved for the entire project lifecycle?	Yes				No
6			No				
7	5.02	Have all project expenditures been identified in the Spending Plan?	0% to 40% -- None or few defined and documented			81% to 100% -- All or nearly all defined and documented	
8			41% to 80% -- Some defined and documented				
9			81% to 100% -- All or nearly all defined and documented				
10	5.03	What is the estimated total cost of this project over its entire lifecycle?	Unknown			Greater than \$10 M	
11			Greater than \$10 M				
12			Between \$2 M and \$10 M				
13			Between \$500K and \$1,999,999				
14			Less than \$500 K				
15	5.04	Is the cost estimate for this project based on quantitative analysis using a standards-based estimation model?	Yes				No
16			No				
17	5.05	What is the character of the cost estimates for this project?	Detailed and rigorous (accurate within ±10%)			Order of magnitude – estimate could vary between 10-100%	Order of magnitude – estimate could vary between 10-100%
18			Order of magnitude – estimate could vary between 10-100%				
19			Placeholder – actual cost may exceed estimate by more than 100%				
20	5.06	Are funds available within existing agency resources to complete this project?	Yes				No
21			No				
22	5.07	Will/should multiple state or local agencies help fund this project or system?	Funding from single agency			Funding from single agency	
23			Funding from local government agencies				
24			Funding from other state agencies				
25	5.08	If federal financial participation is anticipated as a source of funding, has federal approval been requested and received?	Neither requested nor received			Neither requested nor received	
26			Requested but not received				
27			Requested and received				
28			Not applicable				
29	5.09	Have all tangible and intangible benefits been identified and validated as reliable and achievable?	Project benefits have not been identified or validated			Most project benefits have been identified but not validated	
30			Some project benefits have been identified but not validated				
31			Most project benefits have been identified but not validated				
32			All or nearly all project benefits have been identified and validated				
33	5.10	What is the benefit payback period that is defined and documented?	Within 1 year			No payback	
34			Within 3 years				
35			Within 5 years				
36			More than 5 years				
37			No payback				
38	5.11	Has the project procurement strategy been clearly determined and agreed to by affected stakeholders?	Procurement strategy has not been identified and documented			Stakeholders have reviewed and approved the proposed procurement strategy	
39			Stakeholders have not been consulted re: procurement strategy				
40			Stakeholders have reviewed and approved the proposed procurement strategy				
41	5.12	What is the planned approach for acquiring necessary products and solution services to successfully complete the project?	Time and Expense (T&E)				
42			Firm Fixed Price (FFP)				
43			Combination FFP and T&E				
44	5.13	What is the planned approach for procuring hardware and software for the project?	Timing of major hardware and software purchases has not yet been determined			Just-in-time purchasing of hardware and software is documented in the project schedule	
45			Purchase all hardware and software at start of project to take advantage of one-time discounts				
46			Just-in-time purchasing of hardware and software is documented in the project schedule				
47	5.14	Has a contract manager been assigned to this project?	No contract manager assigned			Contract manager assigned is not the procurement manager or the project manager	
48			Contract manager is the procurement manager				
49			Contract manager is the project manager				
50			Contract manager assigned is not the procurement manager or the project manager				
51	5.15	Has equipment leasing been considered for the project's large-scale computing purchases?	Yes				Yes
52			No				
53	5.16	Have all procurement selection criteria and outcomes been clearly identified?	No selection criteria or outcomes have been identified			All or nearly all selection criteria and expected outcomes have been defined and documented	
54			Some selection criteria and outcomes have been defined and documented				
55			All or nearly all selection criteria and expected outcomes have been defined and documented				
56	5.17	Does the procurement strategy use a multi-stage evaluation process to progressively narrow the field of prospective vendors to the single, best qualified candidate?	Procurement strategy has not been developed			Multi-stage evaluation and proof of concept or prototype planned/used to select best qualified vendor	
57			Multi-stage evaluation not planned/used for procurement				
58			Multi-stage evaluation and proof of concept or prototype planned/used to select best qualified vendor				
59	5.18	For projects with total cost exceeding \$10 million, did/will the procurement strategy require a proof of concept or prototype as part of the bid response?	Procurement strategy has not been developed			Yes, bid response did/will include proof of concept or prototype	
60			No, bid response did/will not require proof of concept or prototype				
61			Yes, bid response did/will include proof of concept or prototype				
62			Not applicable

	B	C	D	E
1	Agency: Florida Department of Law Enforcement		Project: Uniform Arrest Affidavit	
3	Section 6 -- Project Organization Area			
4	#	Criteria	Values	Answer
5	6.01	Is the project organization and governance structure clearly defined and documented within an approved project plan?	Yes	Yes
6			No	
7	6.02	Have all roles and responsibilities for the executive steering committee been clearly identified?	None or few have been defined and documented	All or nearly all have been defined and documented
8			Some have been defined and documented	
9			All or nearly all have been defined and documented	
10	6.03	Who is responsible for integrating project deliverables into the final solution?	Not yet determined	System Integrator (contractor)
11			Agency	
12			System Integrator (contractor)	
13	6.04	How many project managers and project directors will be responsible for managing the project?	3 or more	3 or more
14			2	
15			1	
16	6.05	Has a project staffing plan specifying the number of required resources (including project team, program staff, and contractors) and their corresponding roles, responsibilities and needed skill levels been developed?	Needed staff and skills have not been identified	Some or most staff roles and responsibilities and needed skills have been identified
17			Some or most staff roles and responsibilities and needed skills have been identified	
18			Staffing plan identifying all staff roles, responsibilities, and skill levels have been documented	
19	6.06	Is an experienced project manager dedicated fulltime to the project?	No experienced project manager assigned	Yes, experienced project manager dedicated full-time, 100% to project
20			No, project manager is assigned 50% or less to project	
21			No, project manager assigned more than half-time, but less than full-time to project	
22			Yes, experienced project manager dedicated full-time, 100% to project	
23	6.07	Are qualified project management team members dedicated full-time to the project	None	Yes, business, functional or technical experts dedicated full-time, 100% to project
24			No, business, functional or technical experts dedicated 50% or less to project	
25			No, business, functional or technical experts dedicated more than half-time but less than full-time to project	
26			Yes, business, functional or technical experts dedicated full-time, 100% to project	
27	6.08	Does the agency have the necessary knowledge, skills, and abilities to staff the project team with in-house resources?	Few or no staff from in-house resources	Half of staff from in-house resources
28			Half of staff from in-house resources	
29			Mostly staffed from in-house resources	
30			Completely staffed from in-house resources	
31	6.09	Is agency IT personnel turnover expected to significantly impact this project?	Minimal or no impact	Minimal or no impact
32			Moderate impact	
33			Extensive impact	
34	6.10	Does the project governance structure establish a formal change review and control board to address proposed changes in project scope, schedule, or cost?	Yes	Yes
35			No	
36	6.11	Are all affected stakeholders represented by functional manager on the change review and control board?	No board has been established	No, all stakeholders are not represented on the board
37			No, only IT staff are on change review and control board	
38			No, all stakeholders are not represented on the board	
39			Yes, all stakeholders are represented by functional manager	

	B	C	D	E

3	Section 7 -- Project Management Area			
4	#	Criteria	Values	Answer
5	7.01	Does the project management team use a standard commercially available project management methodology to plan, implement, and control the project?	No	Yes
6			Project Management team will use the methodology selected by the systems integrator	
7			Yes	
8	7.02	For how many projects has the agency successfully used the selected project management methodology?	None	More than 3
9			1-3	
10			More than 3	
11	7.03	How many members of the project team are proficient in the use of the selected project management methodology?	None	Some
12			Some	
13			All or nearly all	
14	7.04	Have all requirements specifications been unambiguously defined and documented?	0% to 40% -- None or few have been defined and documented	81% to 100% -- All or nearly all have been defined and documented
15			41 to 80% -- Some have been defined and documented	
16			81% to 100% -- All or nearly all have been defined and documented	
17	7.05	Have all design specifications been unambiguously defined and documented?	0% to 40% -- None or few have been defined and documented	81% to 100% -- All or nearly all have been defined and documented
18			41 to 80% -- Some have been defined and documented	
19			81% to 100% -- All or nearly all have been defined and documented	
20	7.06	Are all requirements and design specifications traceable to specific business rules?	0% to 40% -- None or few are traceable	81% to 100% -- All or nearly all requirements and specifications are traceable
21			41 to 80% -- Some are traceable	
22			81% to 100% -- All or nearly all requirements and specifications are traceable	
23	7.07	Have all project deliverables/services and acceptance criteria been clearly defined and documented?	None or few have been defined and documented	All or nearly all deliverables and acceptance criteria have been defined and documented
24			Some deliverables and acceptance criteria have been defined and documented	
25			All or nearly all deliverables and acceptance criteria have been defined and documented	
26	7.08	Is written approval required from executive sponsor, business stakeholders, and project manager for review and sign-off of major project deliverables?	No sign-off required	Review and sign-off from the executive sponsor, business stakeholder, and project manager are required on all major project deliverables
27			Only project manager signs-off	
28			Review and sign-off from the executive sponsor, business stakeholder, and project manager are required on all major project deliverables	
29	7.09	Has the Work Breakdown Structure (WBS) been defined to the work package level for all project activities?	0% to 40% -- None or few have been defined to the work package level	41 to 80% -- Some have been defined to the work package level
30			41 to 80% -- Some have been defined to the work package level	
31			81% to 100% -- All or nearly all have been defined to the work package level	
32	7.10	Has a documented project schedule been approved for the entire project lifecycle?	Yes	Yes
33			No	
34	7.11	Does the project schedule specify all project tasks, go/no-go decision points (checkpoints), critical milestones, and resources?	Yes	No
35			No	
36	7.12	Are formal project status reporting processes documented and in place to manage and control this project?	No or informal processes are used for status reporting	Project team and executive steering committee use formal status reporting processes
37			Project team uses formal processes	
38			Project team and executive steering committee use formal status reporting processes	
39	7.13	Are all necessary planning and reporting templates, e.g., work plans, status reports, issues and risk management, available?	No templates are available	All planning and reporting templates are available
40			Some templates are available	
41			All planning and reporting templates are available	
42	7.14	Has a documented Risk Management Plan been approved for this project?	Yes	Yes
43			No	
44	7.15	Have all known project risks and corresponding mitigation strategies been identified?	None or few have been defined and documented	All known risks and mitigation strategies have been defined
45			Some have been defined and documented	
46			All known risks and mitigation strategies have been defined	
47	7.16	Are standard change request, review and approval processes documented and in place for this project?	Yes	Yes
48			No	
49	7.17	Are issue reporting and management processes documented and in place for this project?	Yes	Yes
50			No	

	B	C	D	E
1	Agency: Florida Department of Law Enforcement		Project: Uniform Arrest Affidavit	
2				
3	Section 8 -- Project Complexity Area			
4	#	Criteria	Values	Answer
5	8.01	How complex is the proposed solution compared to the current agency systems?	Unknown at this time	Similar complexity
6			More complex	
7			Similar complexity	
8			Less complex	
9	8.02	Are the business users or end users dispersed across multiple cities, counties, districts, or regions?	Single location	More than 3 sites
10			3 sites or fewer	
11			More than 3 sites	
12	8.03	Are the project team members dispersed across multiple cities, counties, districts, or regions?	Single location	Single location
13			3 sites or fewer	
14			More than 3 sites	
15	8.04	How many external contracting or consulting organizations will this project require?	No external organizations	1 to 3 external organizations
16			1 to 3 external organizations	
17			More than 3 external organizations	
18	8.05	What is the expected project team size?	Greater than 15	5 to 8
19			9 to 15	
20			5 to 8	
21			Less than 5	
22	8.06	How many external entities (e.g., other agencies, community service providers, or local government entities) will be impacted by this project or system?	More than 4	More than 4
23			2 to 4	
24			1	
25			None	
26	8.07	What is the impact of the project on state operations?	Business process change in single division or bureau	Statewide or multiple agency business process change
27			Agency-wide business process change	
28			Statewide or multiple agency business process change	
29	8.08	Has the agency successfully completed a similarly-sized project when acting as Systems Integrator?	Yes	Yes
30			No	
31	8.09	What type of project is this?	Infrastructure upgrade	Implementation requiring software development or purchasing commercial off the shelf (COTS) software
32			Implementation requiring software development or purchasing commercial off the shelf (COTS) software	
33			Business Process Reengineering	
34			Combination of the above	
35	8.10	Has the project manager successfully managed similar projects to completion?	No recent experience	Similar size and complexity
36			Lesser size and complexity	
37			Similar size and complexity	
38			Greater size and complexity	
39	8.11	Does the agency management have experience governing projects of equal or similar size and complexity to successful completion?	No recent experience	Greater size and complexity
40			Lesser size and complexity	
41			Similar size and complexity	
42			Greater size and complexity

Appendix F – FDLE’s Information Technology Standards

The following IT standards have been adopted for FDLE’s information systems and services. The application of specific standards may depend on requirements of the systems and services. Questions should be directed to the Division of Information Technology Services.

- a. Architecture
 - Approved cloud computing service is authorized for FDLE applications.
 - Information systems will be developed to operate in a multi-tier architecture
 - Web-based interfaces will be used for the presentation (user) tier
 - Information systems will use load-balancing where appropriate
 - Information systems will operate on clustered server environments where appropriate
 - Development and testing will be performed on separate non-production servers
 - No data or transactions are to be lost due to isolated failures of equipment
- b. Servers
 - Servers will be scaled to handle large bursts of transactions on each interface where appropriate
 - Virtualization will be used when possible
 - Server operating systems will be either Red Hat Linux or Microsoft Windows Server
- c. Storage
 - Information systems will be designed to use redundant storage technologies in primary and backup or secondary (DR) sites
 - Backup and recovery processes will enable the recovery of data and software in the event that primary files are corrupted or destroyed
- d. Network
 - When officer or public safety is involved, CJNET will be the preferred network transport
 - Firewalls will be used to monitor and control incoming and outgoing network traffic
- e. Database
 - FDLE supports relational database(s) using either Oracle RDBMS, Microsoft SQL Server or MySQL
 - Audit logs will capture forensic metadata for all changes to data, including changes made by FDLE staff
- f. Application Software
 - Commercial software products must be reviewed and approved by ITS
 - Software development standards are specified in FDLE Development Standards Version 2.0
 - FDLE supports software development using Java EE or Microsoft .NET
 - Java development standards are specified in Java Development Standards Version 2.0
 - Web-based application standards are specified in JSF Web Framework Standards Version 2.0
 - JBoss is the preferred application server platform used for FDLE information systems
 - Web Services should be used where possible when application communicates outside the agency
- g. Security
 - 28 CFR Part 20 and Public Law 92-544, regulates sharing criminal justice information with criminal justice and non-criminal justice governmental agencies

- Systems that store or process criminal history information shall meet the FBI CJIS Security Policy (CSP)
- Florida Statutes
 - Chapter 119, F.S. – Public Records
 - Section 282.318, F.S. – Security of data and information technology
 - Section 501.171, F.S. – Security of confidential personal information
 - Chapter 943, F.S. – Department of Law Enforcement
- Administrative Rules
 - 60GG-2, F.A.C., Information Security
 - 60GG-4, F.A.C. – Cloud Computing
 - 60GG-5, F.A.C. – Information Technology Architecture Standards
- FDLE Policies -
 - 1.4 – Use of FDLE Resources
 - 2.5 – Information Security
 - 2.6 – Acceptable Use of Information Technology
 - 3.1 – Background Investigations.

- Cloud Computing
 - Microsoft Azure Security Best Practices

- Industry Standards – Where applicable, compliance with the following standards is preferred:
 - Lightweight Directory Access Protocol (LDAP)/Active Directory (AD)
 - Security Assertion Markup Language (SAML)
 - Global Federated Identity and Privilege Management (GFIPM)

- h. Availability
 - FDLE’s standards on availability: minimum 99.5% uptime

- i. Data Communication Standards
 - Sections 282.701 to 282.711, F.S. – Communication Information Technology Services Act
 - National Information Exchange Model (NIEM)
 - FBI Criminal Justice Information Services (CJIS) Standards, including those associated with;
 - National Crime Information Center (NCIC)
 - Interstate Identification Index (III)
 - National Fingerprint File (NFF)
 - National Instant Criminal Background Check System (NICS)
 - National Data Exchange (N-Dex)

- j. Accessibility
 - United States Rehabilitation Act – Section 508 details accessibility standards for all systems
 - Section 282.601 to 282.606, F.S. – Accessibility of Information and Technology

- k. Desktop Computing
 - Microsoft Windows Operating System
 - Microsoft Office
 - Microsoft Visio
 - Microsoft Project
 - Adobe Acrobat

- I. Project Management
 - Sections 282.003 to 282.318, F.S. – Information Technology Management Act
 - Rule 60GG-1, F.A.C. – Project Management and Oversight Standards
 - Project Management Institute, Project Management Body of Knowledge (PMBOK)
 - All production deployments must follow ITS procedure 5.1 “Production Change” CCCB

- m. Deviations from these standards must be directed ITS for review and approval.

- n. All identified technologies must be in a supported version

SCHEDULE IV-B FOR BIOMETRIC IDENTIFICATION SOLUTION (BIS) MODERNIZATION

For Fiscal Year 2021-22

I. Schedule IV-B Cover Sheet

Schedule IV-B Cover Sheet and Agency Project Approval	
Agency: Florida Department of Law Enforcement	Schedule IV-B Submission Date: October 15, 2020
Project Name: Biometric Identification Solution (BIS) Modernization	Is this project included in the Agency's LRPP? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
FY 2021-22 LBR Issue Code: 36124C0	FY 2021-22 LBR Issue Title: Biometric Identification Solution (BIS) Modernization
Agency Contact for Schedule IV-B (Name, Phone #, and E-mail address): Ebony Tisby, 850-410-8860, ebonytisby@fdle.state.fl.us	
AGENCY APPROVAL SIGNATURES	
I am submitting the attached Schedule IV-B in support of our legislative budget request. I have reviewed the estimated costs and benefits documented in the Schedule IV-B and believe the proposed solution can be delivered within the estimated time for the estimated costs to achieve the described benefits. I agree with the information in the attached Schedule IV-B.

Project Planning:	Ebony Tisby, 850-410-8860, ebonytisby@fdle.state.fl.us

II. Schedule IV-B Business Case – Strategic Needs Assessment

A. Background and Strategic Needs Assessment

Purpose: To clearly articulate the business-related need(s) for the proposed project.

1. Business Need

Florida Statute 943.051 designates the Florida Department of Law Enforcement (FDLE) as the state's central criminal justice information repository responsible for collecting, storing, maintaining, and retaining criminal history records. The Biometric Identification Solution (BIS) acts as a national fingerprint file (NFF) repository and fingerprint searching and identification system for the state, to include fingerprints, palm prints, and facial images collected during arrest booking events. BIS is used to identify persons booked in jail, for Rapid ID checks (roadside instant checks to verify identity), and for persons undergoing fingerprint-based criminal history record checks for civilians working with vulnerable populations, obtaining a professional license, and for the issuance of concealed weapons permits. BIS is also used by latent examiners across the state to process fingerprint and palm print images obtained from crime scenes. BIS also submits biometric data to the Federal Bureau of Investigation (FBI) for use in nationwide criminal history record checks. BIS is the means that associated arrest information, such as demographics and charging information, is received and passed on to the Computerized Criminal History (CCH) system to update individual criminal history records.

The FDLE BIS is the third largest repository in the nation, containing approximately 9.5 million unique person IDs and 30.6 million fingerprint images, for both criminals and civilian monitored populations such as licensees and employees in positions of special trust. BIS receives and processes 2,300 criminal booking submissions and over 6,700 fingerprint-based criminal history record check submissions daily. Additionally, there are over 9,000 active Rapid ID devices throughout the state that submit over 1.5 million searches per year to the BIS Rapid ID matchers.

The current BIS went into production in 2009 with an original five-year life-cycle expectancy, and subsequently underwent three major planned upgrades to expand its capacities and extend its life expectancy. This proprietary system is completely vendor supported. The BIS system is nearing its end of life, and is projected to exceed its contracted capacity for records, matching, and support of additional latent workstations by December 31, 2021. The overall volume of Florida's criminal and civilian monitored populations has steadily grown, and the trend will continue to increase. The demand for improved system performance and additional storage is essential for maintaining the biometric records.

In 2019, FDLE signed a three-year extension of the current BIS maintenance contract, after which time the BIS vendor advised FDLE the system may begin experiencing a degradation of service in the area of biometric processing. No further substantive expansions are possible to improve the current system as its core architecture is at the end of its life-cycle. Failure to modernize the system will result in degraded services and may limit FDLE's ability to conduct biometric searches and comparisons. Due to the age of the associated hardware, there is an increased risk of catastrophic equipment failure, resulting in a system downtime of a week or longer. Processing will slow down, and response times to stakeholder groups will increase. The increased time to complete a fingerprint search and return a response will create a public safety concern.

The BIS degradation of service will also slow the processing times of fingerprint-based criminal history checks in Florida for those attempting to obtain a license from a regulatory agency, obtain employment in a position of special trust or serve vulnerable populations. Furthermore,

it will adversely affect the ability to share biometric data with the FBI for nation-wide searches. Additionally, the local agencies utilizing latent workstations are operating on outdated and unsupported hardware and software such as Microsoft Windows 7 Operating System, which may impact current operations from a functionality and security standpoint. Without modernizing FDLE's automated fingerprint identification system, the current BIS risks catastrophic system failure which will immediately impact FDLE's operating trust fund based on the inability to make identifications for fingerprint-based criminal history background checks. These daily functions also include supporting officer and public safety at booking, criminal arrests, and communication with the FBI. Ultimately, if not remedied, the degradation of the system will impact safety for all Floridians and visitors to the state of Florida.

2. Business Objectives

In order to comply with Florida Statute 943.051, the BIS Modernization project must support the following business objectives:

- Provide a statewide repository to support the collection of booking (ten-print) records, latent prints, retained civil prints; photographs to include booking, tattoos, and iris; and Rapid Identification (Rapid ID) workload through a cloud-based solution
- Provide improved processes for receiving, storing, and displaying data
- Provide more rapid development and deployment of applications and services
- Ability to provide increased storage capacity as required
- Establish a Disaster Recovery (DR) solution for biometric data housed in BIS, thereby providing a quicker recovery time from a catastrophic system outage and provide redundancy in the storage of the data
- Provide the ability to monitor capacity and increase capacity as data requirements continue to expand
- Provide an improved process for the management of images including fingerprints, palmprints, latent prints, and images such as mugshots, tattoos and scars
- Provide a method for managing civil records independently from criminal records
- Provide improved reporting capability including the ability to run real-time reports
- Provide full functioning, identical test and production systems
- Provide improved existing workflows within BIS
- Provide criminal workflows for Notices to Appear (NTA) and added charges while in custody
- Automate sealed and expunged records indicators
- Ability to establish new workflows for processes such as Livescan in the courtrooms, added charges, personal reviews, and deceased records
- Support enhanced communication between BIS and CCH
- Support enhanced communications between BIS and the FBI systems such as the Next Generation Identification (NGI) system
- Provide a mechanism for receiving and managing sealed and expunged records from CCH
- Meet current FBI, FDLE and state security requirements
- Support an interface to local Automated Fingerprint Information System (AFIS) installations that comply with the Interface Control Document (ICD)
- Comply with state and national fingerprint retention requirements
- Provide the ability to receive, process and submit data through NIEM XML standards and the FBI's Electronic Biometric Transmission Specification (EBTS)
- Support data submissions to Florida's CJIS Portal
- Take advantage of the enhanced system accuracy.

B. Baseline Analysis

Purpose: To establish a basis for understanding the business processes, stakeholder groups, and current technologies that will be affected by the project and the level of business transformation that will be required for the project to be successful.

1. Current Business Process(es)

FDLE's Criminal Justice Information Services (CJIS) is responsible for collecting, processing, storing, maintaining, and disseminating criminal justice information records necessary to the operation of Florida's criminal justice agencies. For every adult physically arrested and for juveniles arrested for specified offenses, the statute requires a booking event that includes fingerprints, palm prints, and facial images be submitted to FDLE's BIS. All criminal history records maintained by FDLE are based on positive biometric identification. Based on a fingerprint identification, each offender is assigned a unique number called a State Identification (SID) number, also known as an FDLE number. Fingerprints may be captured using the "ten-print" which includes fingerprints from all ten digits from criminals and civilians and "less-than-ten" which is the industry term for transactions like Rapid ID.

BIS contains fingerprints, palm prints, and facial images. This includes a total of 30.6 million arrest fingerprints and 9.5 million subject fingerprints; 8.5 million palm prints; and 4.6 million facial images. (There are approximately 400,000 subjects in CCH who have fingerprints on microfilm that are not searchable in BIS.)

- Demographic information such as name, date of birth, sex, race, height, weight, hair color, eye color, social security number, scars/marks/tattoos, and other personal and physical descriptors
- Charge information including arrest dates, arresting/booking agency, and arrest charges
- Custody information for offenders sentenced to state prison
- Registration information for subjects required to register as a sexual offender, sexual predator, career offender, and those sentenced to felony probation

Booking Ten-print Process:

Upon receipt of booking and registration fingerprints from local agencies, BIS compares the submitted fingerprints to existing criminal and civil retained fingerprints to determine if the person has a prior event. If there is a prior event, the fingerprints are verified as being of the same individual prior to the new set of fingerprints being added to the existing record. The booking information is submitted electronically via Livescan fingerprint submissions from sheriff's offices, police departments, county corrections, Department of Juvenile Justice and other submitting agencies from Florida's 67 counties. While the electronic fingerprint submission of a booking is preferred, in some instances, an agency may need to submit booking information on hard fingerprint cards. Fingerprint cards mailed to FDLE containing the required data elements are forwarded to the Biometric Services Section for entry and verification. When missing or invalid data elements are detected, the fingerprint card is flagged for corrective action. The submitting agency is contacted to resolve any discrepancies found on the fingerprint cards. Upon resolution of the error(s), the information is entered and verified. The fingerprint cards are then scanned and electronically submitted through BIS.

Latent Print Process:

Latent prints are impressions produced by the ridged skin, known as friction ridges, on human fingers, palms, and soles of the feet. Examiners analyze and compare latent prints to known prints of individuals in an effort to make identifications or exclusions. The Latent Stations are the FDLE crime laboratories and local crime laboratories that directly submit to FDLE. Latent

searches submitted to FDLE BIS through these Latent Stations search 20 fingers (10 finger blocks and the plain impressions or slaps) as well as the palm recordings for each hand, and all incidents for each individual stored in the FDLE BIS. This exponentially increases the potential to identify the source of the latent print. Latent Stations interface with the FBI's NGI Remote Universal Latent Workstation (ULW). The BIS Latent Station submits latent transactions using Hyper Text Transfer Protocol (HTTP). The Remote ULW uses email to send /receive NIST-formatted files to/from the FDLE BIS Data Exchange Services (DES) using SMTP, POP3, and IMAP4 protocol. The NIST files are included as SMIME-encoded email attachments.

Retained Civil Print Process:

Section 943.05, Florida Statutes, allows for the submission and subsequent retention of civil fingerprints to FDLE. Following a state and national fingerprint-based record check, FDLE will retain civil fingerprints if: (a) the Authorized Recipient or Qualified Entity requests fingerprint retention, or (b) the Authorized Recipient or Qualified Entity is required to retain civil fingerprints under Florida law. Incoming fingerprints related to criminal registrations and bookings are submitted to FDLE and searched against all retained fingerprints. If a fingerprint match occurs, FDLE provides criminal registration and criminal event notifications to the Authorized Recipient or Qualified Entity of the retained monitored civilian. The Florida Integrated Criminal History System (FALCON) automatically transmits each criminal registration and arrest notification to the Authorized Recipient or Qualified Entity via FDLE's electronic SecureMail application. FDLE requires all Authorized Recipients and Qualified Entities to manage their own retained civilian fingerprints through FALCON.

Rapid Identification (Rapid ID):

Small, often portable, "less-than-ten" fingerprint readers referred to as edge devices are required to perform rapid identification transactions. The edge devices capture and submit biometric data to Rapid ID, which makes a search against fingerprint minutia data from events provided from BIS using two fingerprint images. Edge devices are employed in a variety of settings including jails, courtrooms, and patrol cars to quickly perform searches to determine if a person has a criminal event in BIS. Rapid ID is used with multiple functions to include re-registering a sex offender, checking the status of a DNA submission, or querying the FBI's Repository for Individuals of Special Concern (RISC).

2. Assumptions and Constraints

Assumptions

- Detailed requirements must be documented before moving forward with the project for each implementation phase.
- The system will comply with state of Florida and FBI Criminal Justice Information Services (CJIS) Security Policies.
- The system will comply with the standardized system communications FDLE based on NIEM XML.
- Fingerprint matching algorithms are proprietary.
- A cloud solution offers FDLE a high level of security, scalability, and increased availability.

Constraints

- Existing latent workstations must be replaced to connect to the modernized BIS.
- CCH, FALCON, Civil Workflow Control System (CWCS) interfaces must be modified to

- connect to the modernized BIS.
- The Legislature’s intent for state agencies to adopt a cloud-first policy.

C. Proposed Business Process Requirements

Purpose: To establish a basis for understanding what business process requirements the proposed solution must meet in order to select an appropriate solution for the project.

1. Proposed Business Process Requirements

The system shall meet the following requirements:

- Collect latent prints, ten-prints, images and data for criminal bookings from local agencies
- Collect ten-prints and data for civil fingerprint submissions
- Collect latent prints from unsolved criminal investigations for comparison to retained criminal and civil fingerprints
- Expand image collection beyond mugshots to other modalities
- Improved matching algorithms
- Provide the following interfaces:
 - Livescan
 - Latent Workstations
 - County AFIS
 - FBI’s Next Generation Identification (NGI) system
 - FALCON
 - CWCS
 - Digital Image System
 - CCH
 - Florida CJIS Portal
- Retain all source fingerprint submissions
- Generate workload and throughput statistics for canned and ad hoc reporting
- Provide notifications when specific trigger events occur within the system
- Provide separate work queues for processing data submissions
- Provide administrative functions and features
- Support or improve existing functionality
- Establish a Disaster Recovery (DR) solution
- Expand criminal workflows for new processes (e.g. NTA)

2. Business Solution Alternatives

This section describes the analysis of alternative approaches considered for implementing a replacement for the current BIS system.

To conduct the alternatives analysis the following steps were performed:

- Identified and defined a list of potential alternative system implementation methods
- Developed high-level functional requirements the new system must be capable of addressing
- Established a set of uniform evaluation criteria against which each alternative was measured
- Evaluated each of the alternatives through the application of the evaluation criteria
- Determined the best alternative for the Department

Three approaches are presented:

Approach 1: In-House Management of Fingerprint Processing

Develop a new in-house system using a combination of staff and contracted staff. This approach is not feasible. FDLE does not have the technical expertise to build a biometric identification system or biometric matching algorithms.

Approach 2: System Replacement

Replace the current biometric identification system with a new solution which can meet FDLE's functional requirements and capacity needs. Replacing the aging BIS system allows for a new, more robust AFIS system with improved matching capabilities while also supporting expanded business requirements for new biometric modalities like facial recognition and iris scans.

Approach 3: Status Quo/As-Is

Continue to operate FDLE's current biometric identification system. No modifications or improvement can be made at this time. Additionally, system hardware will be of an age where replacement of parts is no longer feasible or available, requiring potential replacement of whole portions of the system which the current vendor has indicated is no longer possible.

3. Rationale for Selection

FDLE applied several criteria to compare alternatives and recommend a business solution that best meets the business and strategic needs of the agency, as well as state and local agency stakeholders.

These criteria include:

- Additional effort required to migrate data to an alternative proprietary system
- Initial and future workload for state and local agencies
- Ability to automate or streamline biometric identification processes
- Expand the ability to integrate with additional systems
- Ability to dynamically expand capacity as growing workload demands
- Impact to vendor and agency systems
- Impact to FDLE IT services and systems
- Cost to transition to a different vendor
- Accuracy of record matching

4. Recommended Business Solution

After evaluation of several approaches, the recommended business solution is to replace the current BIS with a new modernized solution, based on Approach 2, above. This system will meet Florida's needs for collecting, processing, storing, maintaining, and disseminating of biometrically based records. FDLE intends to modernized the BIS with sole source procurement that is customizable to meet current and future business needs and integrate with existing systems. FDLE has been operating Idemia biometric identification systems since the 1980's and has extensive experience with the fingerprint technology they provide. In order to reduce the inherent risk of this large technology project, contracting with the existing vendor reduces the risk and cost associated with attempting to procure and integrate fingerprint identification technology from other firms. Each biometric identification company has proprietary fingerprint matching algorithms; therefore, migrating to another proprietary matching algorithm would be costly and time-consuming.

The contracted systems will include, but are not limited to:

- BIS repository
- BIS matching subsystem
- Integration with existing interfaces
- Incorporating Rapid ID
- Software as a service
- Project management services
- Workflow software customization services
- User Management
- Data analysis and migration services
- System integration and testing services
- Implementation and configuration
- Training services (technical and user)
- Security services

D. Functional and Technical Requirements

Purpose: To identify the functional and technical system requirements that must be met by the project.

The following are the high-level requirements for the new BIS:

- Improve the methods of receiving, storing, and displaying data
- Improve system performance and flexibility of the database, programs, and reports in real time
- Store the demographic information for the retained civil fingerprint submissions
- Expand criminal and civil workflows
- Provide a function for managing agency users and associated licenses
- Provide management functionality for administrators
- Provide full system auditing and search capability
- Provide error queue management functionality
- Provide full functioning, identical test and production systems
- Collect and manage ten-print, palm print images and data from local agencies
- Provide counties access to their submitted data
- Improved automated matching capabilities
- Provide connectivity and interoperability to latent print workstations
- Provide new modalities for facial recognition and iris scans
- Meet the Legislature's intent for state agencies to adopt a cloud-first policy
- Establish a Disaster Recovery (DR) solution with real-time failover capability
- Meet FDLE's information technology (IT) standards and policies
- Maintain compliance with the FBI CJIS Security Policy (CSP), state of Florida, and FDLE security rules
- Follow FDLE standard on system availability: minimum 99.9% uptime, 24 hours a day, 7 day a week and 365 days a year
- Contain all migrated data from the current BIS to the new solution
- Meet the estimated capacity needs

- Interface with existing internal and external systems Include extensive security measures, such as encryption of data in transit, multi-tiered default denies firewall security zones monitored by intrusion-detection systems, automatic logs analysis, correlation and incident detection, quarterly security assessments, and regular penetration testing

III. Success Criteria

Purpose: To identify the critical results, both outputs and outcomes, that must be realized for the project to be considered a success.

SUCCESS CRITERIA TABLE				
#	Description of Criteria	How will the Criteria be measured/assessed?	Who benefits?	Realization Date (MM/YY)
1	More detailed and accurate finger print information available	Increase of BIS completing prints without review by a fingerprint analyst above 99%	FDLE Local Agencies	10/2024
2	More complete biometric data available	Able to use facial and iris capabilities	FDLE Local Agencies	10/2024
3	Decrease the amount of manual processing	Data verification information generated by BIS and available users	FDLE	10/2024
4	Leverage new technology	Use of latest and standard web/cloud services	FDLE	10/2024
5	Improve work flows and support new work flows	Validation of work flows	FDLE	10/2024
6	Improved real time run reports with better layout for readability	Validation of real time reports	FDLE	10/2024
7	Improved user-friendly administrator screens	Validation of Administrator screens	FDLE	10/2024
8	Ability to view original submission	Validation of submission	FDLE	10/2024
9	Provide a test system that	Validation of test system	FDLE	10/2024

SUCCESS CRITERIA TABLE				
	is identical to production			
10	Implementation of a DR system	Measured by the existence of a DR system for the BIS production system	FDLE	10/2024
11	Meet FDLE's high availability requirements	Validation of BIS; Must be available 99.5% of the time.	FDLE	10/2024
12	Meet FDLE's Information Technology (IT) standards and policies	Review of BIS processes to FDLE standards and policies	FDLE	10/2024
13	Maintain compliance with the FBI CJIS Security Policy (CSP), State of Florida, and FDLE security rules	Validation of Compliance	FDLE	10/2024
14	Support current and new interfaces	Validation of interfaces	FDLE	10/2024
15	Successful migration of BIS data	Measured by the system containing the all data from the legacy BIS system	FDLE	10/2024

IV. Schedule IV-B Benefits Realization and Cost Benefit Analysis

A. Benefits Realization Table

Purpose: To calculate and declare the tangible benefits compared to the total investment of resources needed to support the proposed IT project.

BENEFITS REALIZATION TABLE					
#	Description of Benefit	Who receives the benefit?	How is benefit realized?	How is the realization of the benefit measured?	Realization Date (MM/YY)
1	Modern system for the 21 st century	<ul style="list-style-type: none"> • Public • Criminal Justice Agencies • Non-criminal Justice Agencies • FDLE 	The current BIS was put into production in 2009 with an original 5-year contract plan, and subsequently underwent three major planned upgrades to expand its capacities and extend its life expectancy. It will have a framework that is scalable and extensible allowing it to respond and adapt to the internet age, provide new functions and services, such as improved matching, Iris and Facial Capabilities.	A modern system for the 21 st century will be measured by the implementation.	10/2024
2	Improved public and officer safety	<ul style="list-style-type: none"> • Public • Criminal Justice Agencies • Non-criminal Justice Agencies 	The “cost of a life” is priceless. Improved effectiveness and efficiency to match biometric data will have a significant impact on criminal justice stakeholders which include the ability to quickly share necessary biometric information during the course of a criminal investigation, the decision to release an inmate on bail during judicial proceedings, or determining eligibility for civilians seeking a license or employment to serve vulnerable populations.	Improved public safety is not easily measured. Improved matching capability should provide improved information sharing with stakeholder partners.	10/2024

BENEFITS REALIZATION TABLE					
3	More complete and timely data for the criminal history background checks (<i>Non-criminal Justice</i>)	<ul style="list-style-type: none"> • Public • Vulnerable populations • DCF • DJJ • AHCA • DOH • APD • DOACS • DBPR • Elder Affairs 	Implementing new technologies that will enable the BIS to handle larger volumes of transactions more efficiently, provide more accurate biometric matching, and add previously unavailable system functionalities such as Iris and Facial capabilities. Improved effectiveness and efficiency to match biometric data will have a significant impact on criminal justice stakeholders which include the ability to quickly share necessary biometric information to determine eligibility for civilians seeking a license or employment, such as those that serve vulnerable populations.	More complete and timely data for the criminal history background checks (Non-criminal Justice) use will be measured by the implementation of new methods for receiving data, storing data, and displaying data in a new BIS.	10/2024

BENEFITS REALIZATION TABLE					
4	More complete and timely information for criminal justice use	<ul style="list-style-type: none"> • Public • Law Enforcement Agencies • Department of Corrections • Courts • State Attorneys • Jails 	<p>The completeness and timeliness of criminal data have a significant impact on criminal justice decisions which increase public safety. Examples are:</p> <ul style="list-style-type: none"> • Investigations • Arrests and booking decisions • Pre-trial release (bail and bond) decisions • Charging decisions • Jail classification decisions • Sentencing and disposition decisions • Custody classification decisions • Sex offender registrations • Collection of DNA from felony offenders <p>New system functionality includes Facial and Iris Recognition. The law enforcement community would have access to over five million mugshots with associated arrest events providing the ability to compare or match mugshots to other facial sources. Facial recognition technology has become widespread and reliable enough that law enforcement and correctional agencies are utilizing it to meet their investigative and security needs. Incorporating this technology into BIS will be a significant benefit to the criminal justice community and to public safety.</p>	More complete and timely information for criminal justice use will be measured by the implementation of new methods for receiving data, storing data, and displaying data in a new BIS system. It also contributes to the improved accuracy of criminal history records maintained with the CCH.	10/2024

BENEFITS REALIZATION TABLE					
5	Improved database structure	<ul style="list-style-type: none"> • FDLE 	A modernized BIS will have a new structure that will improve data storage and reliability. The current system would require a minimum of 7-14 days to recover from catastrophic failure in order to rebuild the repository and repair/replace hardware. The modernized system will require approximately 2 days of recovery time.	The improved database structure will be measured by improved data integrity through improved data storage and improved performance of the database updates.	10/2024

B. Cost Benefit Analysis (CBA)

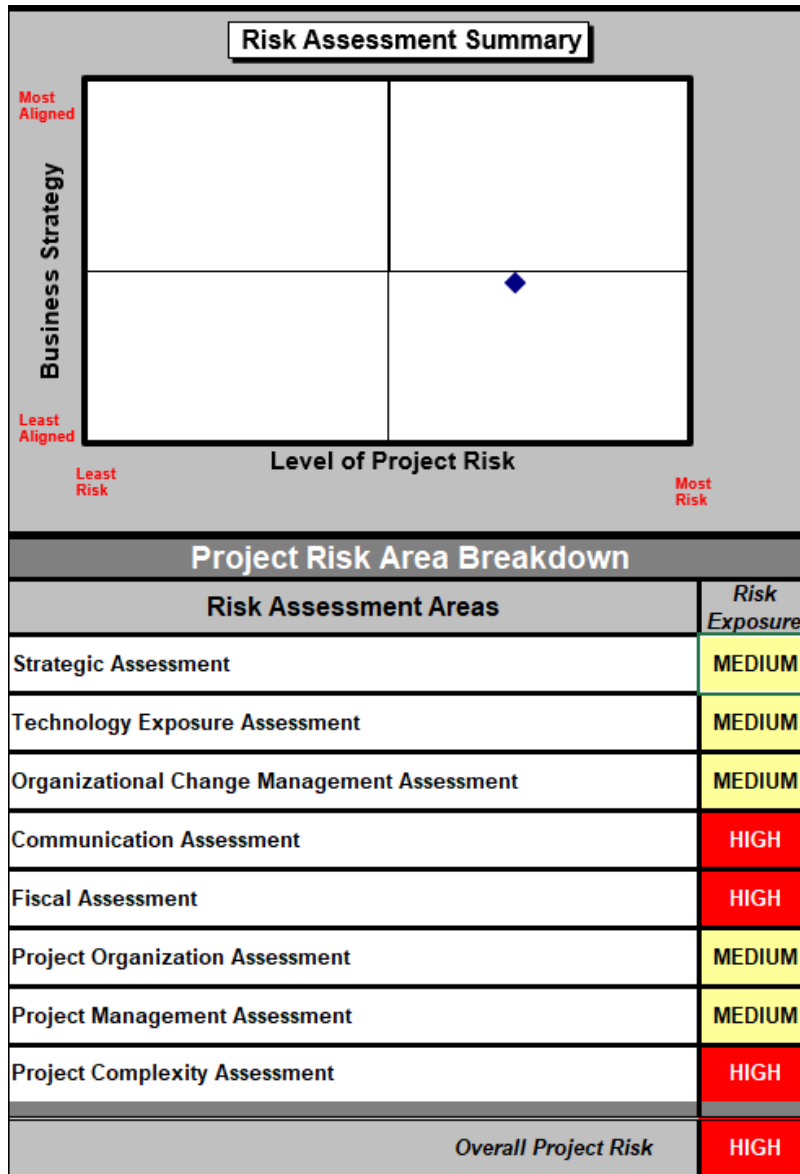

Purpose: To provide a comprehensive financial prospectus specifying the project's tangible benefits, funding requirements, and proposed source(s) of funding.

The forms required for CBA are included as Appendix E.

V. Schedule IV-B Major Project Risk Assessment

Purpose: To provide an initial high-level assessment of overall risk incurred by the project to enable appropriate risk mitigation and oversight and to improve the likelihood of project success. The risk assessment summary identifies the overall level of risk associated with the project and provides an assessment of the project's alignment with business objectives.

A. Risk Assessment Summary Table

The complete risk assessment worksheets are in Appendix F.

VI. Schedule IV-B Technology Planning

Purpose: To ensure there is close alignment with the business and functional requirements and the selected technology.

A. Current Information Technology Environment

The current BIS was originally deployed in 2009 and designed to meet the FDLE capacity, throughput and / requirements for 5 years (2013). The BIS has been incrementally upgraded three separate times since 2013 to expand its capacity and extend its life expectancy. The life expectancy designs of systems use estimates of future capacity and throughput and the BIS is no different. Actual production figures often differ from projections and as a result, manufacturers tend to add extra 'buffer' into their designs to mitigate the risk of reaching system capacities earlier than planned. The actual BIS production data analysis concluded that the contingency contracted capacities will fully be consumed by January 2022.

Estimate is based on the following assumptions:

- Average or projected database growth based on the 2018 actuals rate remains constant
- Average throughput remains constant based on the 2018 actuals

1. Current System

a. Description of Current System

The FDLE BIS is the third largest repository in the nation, containing approximately 9.5 million unique person IDs and 30.6 million fingerprint images, for both criminals and civilian monitored populations such as licensees and employees in positions of special trust. BIS receives and processes 2,300 criminal booking submissions and over 6,700 fingerprint-based criminal history record check submissions daily. Additionally, there are over 9,000 active Rapid ID devices throughout the state that submit over 1.5 million searches per year to the BIS Rapid ID matchers. The Interface Control Document (ICD) details the system's existing processes.

The existing BIS was installed in 2009, and many of the components are approaching or at End of Support (EOS) or End of Life (EOL) as defined by the Original Equipment Manufacturers (OEMs).

- The core architecture is reaching capacity as throughput continues to increase.
- The existing hardware is supported until December 31, 2021.
- Hardware replacement is unavailable for most components.
- Failure of servers will disable the system.
- Security patching will no longer be provided leaving the system vulnerable.

The table below shows the monthly Performance Metrics of the Transactions. Please note FDLE has seen decreases in criminal and civil retained fingerprints due to COVID-19.

DATE	08/2020	07/2020	06/2020	05/2020	04/2020
Total All Transaction	506,332	466,182	416,482	340,600	234,360
Total Criminal Search TOT	67,382	47,929	46,641	98,075	39,436
Total Applicant Search TOT	222,027	211,685	181,216	118,142	78,132
Total Latent Search TOT	7,765	8,285	9,239	5,133	7,496
Total None Search TOT	209,158	198,283	179,386	119,250	109,296

Requirements for Public Access, Security, Privacy, and Confidentiality

The BIS meets the requirements of the FBI concerning access and use of criminal records and Florida Statutes that allow public access.

Hardware Characteristics

The overall FDLE system consists of two (2) Advanced Data Storage (ADS) production servers. There are separate network interfaces for users accessing via CJNET versus the internet, and each interface includes a network load balancer. Most storage is internal to the servers, may use the FDLE SAN.

Software Characteristics

The overall FDLE system uses a number of different software and data-based components that have been developed over the years. The characteristics for software used by state and local agencies that submit data to FDLE vary by agency.

Existing System and Process Documentation

The current processes, software products and tools in use at FDLE have evolved over the years. Documentation for the total system as a whole does not exist, although some individual processes and software products have been documented. System and process documentation available at state and local agencies that submit data to FDLE are unknown.

System Interfaces

The current systems include a number of internal and external interfaces as described below.

- Rapid DNA
- LiveScan
- Latent Workstations
- County AFIS
- FBI's NGI system
- FALCON
- CWCS
- Digital Image System
- CCH

Consistency with FDLE's Software Standards and Hardware Platforms

The BIS is consistent with agency software standards and hardware platforms. The agency has adopted Oracle on Linux operating system and Microsoft SQL Server on Windows operating system as its standard relational database management system and Java as its standard programming language.

b. Current System Resource Requirements

BIS Web Application Architecture

The current BIS web application architecture is hosted at FDLE Information Technology Services (ITS) and consists of:

- Two (2) Advanced Data Storage (ADS) Servers – Oracle Real Application Cluster
- One Storage Area Network
- One Backup Server (BUPS) with EMC Legato NetWorker
- One Advanced Matching Service (AMS) Subsystem

- Six (6) Data Exchange Services (DES) – Red Hat Linux Cluster
- Eight (8) Data Processing Services (DPS) Computers
- Two (2) Web/Application Servers – Cluster
- One Centralized Management Service (CMS) Computer
- One Centralized Print Service (CPS) Computer
- Six (6) System Server Cabinets
- Three (3) System Console with KVM Switches
- Six (6) Ethernet Switches
- Two (2) Storage Cabinets
- One Tape Library Cabinet
- Two (2) BatchScan Stations
- Three (3) PrintScan stations
- Forty-one (41) PrintScan Software Licenses (without card scanning capability)
- Twelve (12) Latent Stations
- Ten (10) Report Laser Printers
- Two (2) Fingerprint/Palmprint Card Laser Printers
- Eight (8) Photo Quality Printers
- Ninety-Two (92) Review Station Software Licenses
- Eight (8) Review Stations (for county BIS database maintenance and reports), including:
 - Seventy-Two (72) Descriptor Data Completion Entry (DDCE) Software Licenses
 - Four (4) Review Station Software Licenses (to be used for FDLE system support personnel)

The following software is part of the FDLE system:

- Microsoft Windows 2012
- Linux
- JBoss
- Microsoft SQL Server 2014
- Commvault Enterprise back-up
- Java programming language
- Apache Wicket framework
- Kentico
- Microsoft Excel
- Microsoft Access
- FDLE in-house developed authentication and authorization Application Security Module (ASM)

c. Current System Performance

The amount of BIS data grows every year. The BIS has been incrementally upgraded three separate times since 2009 to expand its capacity and extend its life expectancy, which expanded and optimized the Data Exchange Services of the BIS to allow adequately process increased message volumes. The upgrades also expanded and improved the Matching Sub-System (matchers), and replaced and expanded the SAN and Oracle database to meet expanding capacity and throughput demands. It expanded the Matching Sub-System and

workflows to integrate the Applicant AFIS (Black Box Plus) workflows and 1.8 million retained applicant records and extend the capacity and throughput support through December 31, 2021. The BIS core architecture cannot support any further substantive expansions.

The life expectancy designs of systems use estimates of future capacity and throughput and the BIS is no different. Actual production figures often differ from projections and as a result, manufacturers tend to add extra 'buffer' into their designs to mitigate the risk of reaching system capacities earlier than planned. However, the current vendor has noticed FDLE that our current system will be at End of Life on December 31, 2020

Strategic Information Technology Direction

FDLE embraces and promotes open system standards that are established within the IT industry such as, American National Standards Institute (ANSI), and NIEM. These standards and models support the strategic direction of the agency.

- **Architecture** – Promote the use of a multi-tier architecture that allows flexibility, scalability, and reusability.
- **Server Operating Systems** – Utilize server operating systems that will be either Red Hat Linux or Microsoft Windows Server.
- **Server Hardware** – Promote the use of server virtualization
- **Database Management Systems** – Store data in relational database(s) using either Oracle Relational Database Management System (RDBMS) or Microsoft SQL Server.
- **Application Software** – Develop application software using Java Platform Enterprise Edition (Java EE).
- **Storage** – Promote the use of SAN.
- **System Reliability and Availability** – Provide information systems and network services that give end users high (99.5+ %) reliability and availability/redundancy.
- **Integration and Efficiency** – Create modular, integrated systems that can be maintained by FDLE staff and can be easily modified to meet changing business needs of the agency.
- **High Availability and Disaster Recovery** – Provide a modular, integrated system that provides high availability through disaster recovery.

2. Information Technology Standards

See attached Appendix B for the FDLE information Technology Standards. When applicable, FDLE's information technology standards are followed.

B. Current Hardware and/or Software Inventory

BIS Web Application Architecture

The current BIS web application architecture is hosted at FDLE Information Technology Services (ITS) and consists of:

- Firewall protecting FDLE user access
- Two (2) Advanced Data Storage (ADS) Servers – Oracle Real Application Cluster, including:
 - Four (4) Oracle Enterprise License
 - Four (4) Oracle RAC
- One Storage Area Network, including:
 - Two (2) Fiber Channel Hubs

- One RAID Array Storage Subsystem (50 TB)
- One LTO Automated Tape Library (50 TB)
- One Backup Server (BUPS) with EMC Legato NetWorker
- One Advanced Matching Service (AMS) Subsystem, including
 - Two (2) Advanced Matcher Controller (AMC) – Red Hat Linux Cluster
 - Eighty (80) Adaptive Matcher Processor (AMP)
 - Four (4) Expert Matching (EM)
 - Thirty (30) Palmprint Adaptive Matcher Processor (PAMP)
 - Two (2) Grayscale Matcher (GSM)
- Six (6) Data Exchange Services (DES) – red Hat Linux Cluster; as per the following:
 - Two (2) LiveScan/CWCS/ULW Interface – Cluster
 - Two (2) CCH Interface/NGI/Interstate AFIS Interface – Cluster
 - Two (2) Mail servers - Cluster
- Eight (8) Data Processing Services (DPS) Computers
- Two (2) Web/Application Servers – Cluster
- One Centralized Management Service (CMS) Computer
- One Centralized Print Service (CPS) Computer
- Six (6) System Server Cabinets
- Three (3) System Console with KVM Switches
- Six (6) Ethernet Switches
- Two (2) Storage Cabinets
- One Tape Library Cabinet
- Two (2) BatchScan Stations, Including:
 - One Workstation PC with 20” Flat Panel Display, Keyboard & mouse
 - Two (2) Flatbed Scanners with Automatic Document Feeder
 - One Workstation Desk and Chair
- Three (3) PrintScan stations
 - One Workstation PC with 24” and 20” Flat Panel Displays, Keyboards & Mouse
 - One Flatbed Scanner
 - One Workstation Desk and Chair
- Forty-one (41) PrintScan Software Licenses (without card scanning capability)
- Twelve (12) Latent Stations
 - One Workstation PC with 24” and 20” Flat Panel Display, Keyboard & Mouse
- Ten (10) Report Laser Printers
- Two (2) Fingerprint/Palmprint Card Laser Printers
- Eight (8) Photo Quality Printers
- Ninety-Two (92) Review Station Software Licenses
- Eight (8) Review Stations (for county BIS database maintenance and reports), including:
 - One Workstation PC with Monitor, Keyboard and Mouse
 - One Review Station Software License
- Seventy-Two (72) Descriptor Data Completion Entry (DDCE) Software Licenses
 - One for each existing FDLE Motorola LiveScan that does not have a JMS
- Four (4) Review Station Software Licenses (to be used for FDLE system support personnel)

The following software is part of the FDLE system:

- Microsoft Windows 2012
- Linux
- JBoss
- Microsoft SQL Server 2014

- Commvault Enterprise back-up
- Java programming language
- Apache Wicket framework
- Kentico
- Microsoft Excel
- Microsoft Access
- FDLE in-house developed authentication and authorization Application Security Module (ASM)

C. Proposed Technical Solution

1. Technical Solution Alternatives

This section describes the analysis of alternative approaches considered for implementing a replacement for the current BIS.

To conduct the alternatives analysis the following steps were performed:

- Identified and defined a list of potential alternative system implementation methods
- Developed high-level functional requirements that the new system must be capable of addressing
- Established a set of uniform evaluation criteria against which each alternative was measured
- Evaluated each of the alternatives through the application of the evaluation criteria
- Determined the best alternative for the Department

Three approaches are presented:

Approach 1: On-Premises Solution Replacement

Replace the current biometric identification system with an on-premises option to be housed in the FDLE data center.

Approach 2: Cloud-Based Solution Replacement

Replace the current biometric identification system with a cloud-based solution to be housed in the Azure Government Cloud.

Approach 3: Status Quo/As-Is

Continue to operate FDLE's current biometric identification system. No modifications or improvement can be made at this time and the vendor has notified FDLE that the current system will be at End of Support on December 31, 2021.

2. Rationale for Selection

FDLE applied several criteria to compare alternatives and recommend a business solution that best meets the business and strategic needs of the agency, as well as state and local agency stakeholders.

These criteria include:

- Additional effort required to migrate data to an alternative proprietary system
- Initial and future workload for state and local agencies
- Ability to automate or streamline biometric identification processes
- Expand the ability to integrate with additional systems

- Ability to dynamically expand capacity as growing workload demands
- Impact to vendor and agency systems
- Impact to FDLE IT services and systems
- Cost to transition to a different vendor
- Accuracy of record matching

Fingerprint matching is at the utmost importance due to the necessity to accurately match records and is a critical factor in the selection rationale of the solution.

3. Recommended Technical Solution

After comparing the on-premises option to the cloud-based solution, FDLE recommends replacing the current BIS with a new modernized cloud-based solution. This system will meet Florida's needs for collecting, processing, storing, maintaining, and disseminating of biometrically based records. Software as a service will allow FDLE to avoid purchasing and maintaining physical hardware. In addition, the upfront cost is significantly reduced. By utilizing software as a service and a phased approach to modernizing the BIS, FDLE is able to minimize the initial cost and adjust the solution as needed. By paying annual maintenance fees, FDLE will no longer make large scale budget requests for a multi-year projects every 7-10 years to sustain the state's biometric repository.

FDLE intends to modernized the BIS with a sole source procurement that is customizable to meet current and future business needs and integrate with existing systems. FDLE has been operating Idemia biometric identification systems since the 1980's and has extensive experience with the fingerprint technology they provide. In order to reduce the inherent risk of this large technology project, contracting with the existing vendor reduces the risk and cost associated with attempting to procure and integrate fingerprint identification technology from other firms. Each biometric identification company has proprietary fingerprint matching algorithms; therefore, migrating to another proprietary matching algorithm would be costly and time-consuming. The vendor's cloud-based system maintained at multiple identical sites allows for more robust backup and recovery capabilities, improved capability of matchers and processing for increased speed and accuracy. The modernized cloud-based BIS will be able to process and store all biometric data due to its ability to dynamically expand to support current and future capacity needs unlike traditional on-premises systems. In addition, the system will be able to perform all necessary upgrades as required with seamless scalability. The ability to expand and upgrade continuously will support the efforts to ensure public safety.

The contracted systems will include, but are not limited to:

- BIS repository
- BIS matching subsystem
- Cloud-based disaster recovery
- Integration with existing interfaces
- Incorporating Rapid ID
- Software as a service
- Project management services
- Workflow software customization services
- User management
- Data analysis and migration services
- System integration and testing services
- Implementation and configuration
- Training services (technical and user)

- Security services

The risks of not implementing a new BIS are listed below:

- Slower processing times of fingerprint-based criminal history checks in Florida for those attempting to obtain a license from a regulatory agency, obtain employment in a position of special trust or serve vulnerable populations could create citizen safety concerns.
- Adversely affect the ability to share biometric data with the FBI for nation-wide searches
- Catastrophic system failure would immediately impact FDLE's operating trust fund based on the inability to make identifications for fingerprint-based criminal history background checks.
- The inability to process daily functions including supporting officer and public safety for all Floridians and visitors to the state of Florida would be jeopardized.
- It will be difficult to incorporate the enhancements required by business or legislation.
- Old technology is limited regarding compliance with emerging federal data communications standards.
- The current BIS is limited to operating latent work stations under Microsoft Windows 7 Operating System. This creates potential security issues moving forward.
- Over time, it will be difficult to acquire technical resources to maintain the old technology. It is also anticipated that this will also result in more frequent and longer down times of the system.
- The current system is showing signs of hardware failure; at least four hard drives have failed to date and server fans are being replaced regularly.
- The BIS core architecture cannot support any further substantive expansions.
- BIS production data analysis concluded that the contingency contracted capacities will fully be consumed by January 2022.

D. Proposed Solution Description

The proposed solution is to replace the current BIS with a new modernized cloud-based solution that will be customized to meet Florida's public safety needs.

1. Summary Description of Proposed System

FDLE plans to implement the modernized cloud-based BIS solution in multiple phases. Due to the current capacity issues addressing disaster recovery and Rapid ID, will provide critical relief to the issues with the current BIS and are executed concurrently. FDLE needs to implement the new system in the following phases:

Phase 1.1: Database for Disaster Recovery

Phase 1.1 replicates data storage from the on-premises SAN to the Azure Government Cloud. This provides FDLE two active copies of the AFIS data. If the on-premises SAN fails before the full cloud migration, processing will continue using the database in the cloud. The database in the cloud will also be backed up to a geo-redundant cloud site to eliminate reliance on the on-premises tape library for data backup.

Phase 1.2: Rapid ID

Phase 1.2 builds upon Phase 1.1 by establishing an instance of the new Multi-Biometric Identification System (MBIS) in the Azure Government Cloud and moving the Rapid ID functionality into the cloud. Once the system is functional, all Rapid ID transactions are routed to the cloud for processing.

Phase 2: Latent Print Workstations

Phase 2 builds upon Phase 1.1 and 1.2 by expanding the functionality of the FDLE Cloud MBIS platform by adding latent finger and palm print identification services, including the delivery of new Latent Workstations with Windows 10 or newer operating systems, to enhance FBI CJIS compliance. Along with latent processing, the vendor will configure the cloud environment with the workflows and interfaces needed to begin applicant processing. Civil fingerprint processing can be moved up to the cloud environment either all at once or in waves.

Phase 3: Ten-Print

Phase 3 builds upon Phase 2 by further expanding the FDLE Cloud MBIS platform to include ten-print services and workflows, criminal and civil fingerprint processing, and other features as mutually agreed upon to meet FDLE needs. In addition, this final phase of the modernization project will add augmented vision video analytics services, face expert facial comparison capabilities and MBIS Dashboard functionality. From this point forward all system processing is done through the Azure Government Cloud MBIS, and a decommission plan can be put in place for the legacy on-premises BIS.

System Type

- Microsoft Azure Government Cloud
- Software as a service
- Web-based interface

Connectivity

The modernized BIS will interface with the FBI system over existing secure connections. FDLE will provide connectivity to the new BIS.

Security, Privacy, Confidentiality, Access

These standards will be the same as the current security standards used by FDLE.

Development and Procurement Approach

To realize the business solution, FDLE plans a sole source procurement process to acquire the commercially available system that can be customized to meet FDLE’s business requirements.

The contracted systems will include, but are not limited to:

- BIS repository
- BIS matching subsystem
- Integration with existing interfaces
- Incorporating Rapid ID
- Software as a service
- Project management services
- Workflow software customization services
- User management
- Data analysis and migration services
- System integration and testing services
- Implementation and configuration
- Training services (technical and user)
- Security services

Fingerprint matching is at the utmost importance due to the necessity to accurately match records that is relied upon for public safety. In order to accomplish the above objectives and timelines needed to continue operations of FDLE current BIS while addressing current capacity

and degradation issues, FDLE must enter into a sole source procurement. This will allow FDLE to avoid continued degradation of the current system, operational failure in the impending future and ensure the highest level of accuracy is maintained.

Internal and External Interfaces

BIS interfaces with several systems. The systems interfaces are listed below:

- Rapid DNA
- LiveScan
- Latent Workstations
- County AFIS
- FBI’s NGI system
- FALCON
- CWCS
- Digital Image System
- CCH
- Florida CJIS Portal

2. Resource and Summary Level Funding Requirements for Proposed Solution (if known)

Anticipated total project costs are summarized in the table below:

Title:	BIS Modernization				
Tracking #:	TBD				
Customer:	Criminal Justice Information Services	Customer Contact:	_____		
Manager:	TBD	ITS Lead:	_____		
Planned Start:	7/1/2021	Planned Finish:	6/30/2024		
Duration (mos):	36.5	Version #:	1.0		
Baseline Date:	7/1/2021				
Revision Date:					
Project Budget	Planned	Planned	Planned	Planned

E. Capacity Planning
(historical and current trends versus projected requirements)

The FDLE BIS is the third largest repository in the nation, containing approximately 9.5 million unique person IDs and 30.6 million fingerprint images, for both criminals and civilian monitored populations such as licensees and employees in positions of special trust. BIS receives and processes 2,300 criminal booking submissions and over 6,700 fingerprint-based criminal history record check submissions daily. Additionally, there are over 9,000 active Rapid ID devices throughout the state that submit over 1.5 million searches per year to the BIS Rapid ID matchers. The Interface Control Document (ICD) details the system’s existing processes.

The existing BIS was installed in 2009, and many of the components are approaching or at End of Support (EOS) or End of Life (EOL) as defined by the Original Equipment Manufacturers (OEMs).

- The core architecture is reaching capacity as throughput continues to increase.
- The existing hardware is supported until December 31, 2021.
- Hardware replacement is unavailable for most components.
- Failure of servers will disable the system.
- Security patching will no longer be provided leaving the system vulnerable.

The table below shows the monthly Performance Metrics of the Transactions. Please note FDLE has seen decreases in criminal and civil retained fingerprints due to COVID-19.

DATE	08/2020	07/2020	06/2020	05/2020	04/2020
Total All Transaction	506,332	466,182	416,482	340,600	234,360
Total Criminal Search TOT	67,382	47,929	46,641	98,075	39,436
Total Applicant Search TOT	222,027	211,685	181,216	118,142	78,132
Total Latent Search TOT	7,765	8,285	9,239	5,133	7,496
Total None Search TOT	209,158	198,283	179,386	119,250	109,296

Hardware Characteristics

The overall FDLE system consists of two (2) Advanced Data Storage (ADS) production servers. There are separate network interfaces for users accessing via CJNET versus the internet, and each interface includes a network load balancer. Most storage is internal to the servers, may use the FDLE SAN.

Software Characteristics

The overall FDLE system uses a number of different software and data-based components that have been developed over the years. The characteristics for software used by state and local agencies that submit data to FDLE vary by agency.

Capacity Concerns and Forecast

- The large number of LTO-4 tapes currently required to do a backup translates to a 6 to 15 days timeline to restore the system should the system experience catastrophic failure.

SCHEDULE IV-B FOR BIOMETRIC IDENTIFICATION SOLUTION (BIS) MODERNIZATION

	Contractual	Values from System Statistics				Used Avg Increase per year			
		2-Jan-15	4-Jan-16	2-Jan-17	2-Jan-18	1-Jan-19	1-Jan-20	1-Jan-21	1-Jan-22
Tenprint Person	12,500,000	6,020,992	7,526,192	8,261,509	8,754,244	9,665,328	10,576,412	11,487,496	12,398,580
Tenprint Incidents	32,000,000	21,596,156	24,110,856	25,714,855	27,218,914	29,093,167	30,967,419	32,841,672	34,715,925
Palm Print Person	3,200,000	1,849,852	2,027,396	2,190,608	2,351,522	2,518,745	2,685,969	2,853,192	3,020,415
Palm Print Incidents	9,000,000	4,707,366	5,399,695	6,071,410	6,756,574	7,439,643	8,122,713	8,805,782	9,488,851
Mugshots	2,000,000	1,861,140	2,423,925	3,075,551	3,902,229	4,582,592	5,262,955	5,262,955	5,262,955
ULF	240,000	183,695	180,808	180,045	183,263	185,763	188,263	190,763	193,263
ULP	127,000	82,075	83,601	86,091	89,204	91,580	93,957	96,333	98,709

Projected Requirements

The modernized BIS must migrate all data from the current BIS to the new solution. The table below is an example of the data needed to be migrated.

Record Type	Number of Records
Ten-print	33,000,000
Palm Print	9,200,000
Mugshots	5,200,000
Latent Finger	181,000
Latent Palm	90,700

The modernized BIS must meet, at a minimum, the estimated capacity needs documented in the table below.

Record Type	Initial Capacity	Yr-7 Capacity
Ten-print Incidents (500 ppi)	33,000,000	46,300,000
Palm print Incidents (500 ppi)	9,200,000	14,100,000
Mugshots (images)	5,200,000	10,100,000
Unsolved Latent Fingers	181,000	271,500
Unsolved Latent Palms	90,700	136,050

VII. Schedule IV-B Project Management Planning

Purpose: To require the agency to provide evidence of its thorough project planning and provide the tools the agency will use to carry out and manage the proposed project. The level of detail must be appropriate for the project's scope and complexity.

Project Scope

The scope of this project is to design, develop, and replace the current BIS with more modernized automated fingerprint identification system. BIS is a statewide automated fingerprint identification system capable of, but not limited to, reading, classifying, matching, and storing fingerprints, rolled fingerprints, and latent fingerprints. The system is available to every criminal justice agency that is responsible for the administration of criminal justice.

BIS holds all criminal fingerprints, palm prints, mugshots, and scars, marks and tattoo images collected during booking in the state of Florida along with subject's demographic information and criminal charge data. The system uses a combination of automated and manual matching of fingerprints (and palm prints) of new/unknown persons against the existing repository with the purpose of establishing identity. It is used by law enforcement and criminal justice agencies for identification of criminals and by forensic labs for solving crimes.

BIS also compares civil fingerprints submitted for criminal history record checks by Authorized Recipients or Qualified Entities to the criminal fingerprints held in the repository. In addition, Authorized Recipients or Qualified Entities can have these civil fingerprints retained for additional comparison to all incoming booking and criminal registration fingerprints. If a fingerprint match of an incoming criminal submission occurs to a retained civil fingerprint, FALCON transmits a notification of the match to the Authorized Recipient or Qualified Entity.

In addition, the scope of the project includes to build and administer an IT infrastructure to support new and projected expansion and data storage needs related to the storage of criminal data.

FDLE's primary objectives for this project are to:

- Replace current BIS
- Support existing and new interfaces
- Support current and future BIS functionality
- Support facial recognition and other forms of biometric identification
- Incorporate several enhancements to the system
- Support additional storage needed to store criminal information
- Support future storage needs

Project Phasing Plan

This project consists of three high-level phases: detailed planning, procurement/contracting, and implementation and deployment. Given the number of state and local agencies that interface to the BIS, the overall timeframe for this project is relatively long. Additionally, FDLE needs to have the new BIS in place by June 2024; therefore, all phases of the project will overlap, so at least partial functionality is in place by then.

Phase 1 – Detailed Planning

The detailed planning phase involves designing and developing the BIS technical specification and technical requirements, assembling the project team, and establishing mechanisms for FDLE to collaborate with state and local law enforcement agencies and with vendors. The

technical specification and technical requirements documentation are provided to state and local agencies to gain their feedback. During this phase, FDLE will also continue to collect and update information collected during readiness assessments to fill in missing information and to make updates.

Phase 2 - Contracting

This phase of project will include obtaining funding and statutory approvals to move forward with the sole source procurement process.

Phase 3 - Implementation and Deployment

The implementation and deployment phase start as soon as the technical specification and requirements are available. Additionally, FDLE can start development of a test plan and various documentation and software tools to simplify development and testing of products. Once the procurement/contracting phase is complete, vendors can start development of the BIS either by developing a new system or customizations of an existing product.

FDLE will provide technical assistance to those agencies and vendors to aid with the rapid adjustment, to answer questions, and to provide support to ensure a successful BIS replacement.

Toward the end of this phase, desirable additional features or requirements may have been identified; technology advances may be available that would improve the process and related systems; user requests may have been received; new features may be available in the various products; etc. Therefore, it is anticipated that a round of future enhancements and technology refreshes are beneficial to improve services; stay current with technology; and continue to improve the overall process. These enhancements and refreshes are conducted in parallel to any ongoing work. FDLE will retire and decommission outdated business process, tools, methods, and functions that no longer add value to BIS.

Baseline Schedule

A baseline scheduled can be found in Appendix. A more detailed baseline schedule is prepared after a contract is established with vendors

Project Organization

The comprehensive nature of the BIS necessitates the coordination among a variety of disparate agencies and groups. This project requires coordination and management of a skilled project staff consisting of technical, functional, and administrative staff, mixed with contract staff and task-specific vendors.

The BIS Project organization consists of the Project Steering Committee (PSC), the Project Manager, and the Project Team. FDLE SME's and a number of other groups provide additional support. Each group performs a particular role for the project and is comprised of members of ITS, CJIS, and FDLE leadership.

FDLE Executive Leadership

The Executive Leadership consists of the Assistant Commissioner (Public Safety Services), Director of CJIS (also the project sponsor), Special Agent in Charge (SAC) of Office of Statewide Investigative Services and the Chief Information Officer (CIO). The CJIS Director and CIO report to the Assistant Commissioner of Public Safety Services. The SAC reports to the Assistant Commissioner of Investigations and Forensic Sciences. The Executive Leadership provides guidance on project decisions that impact scope, schedule, and budget.

FDLE Project Steering Committee

The PSC monitors and resolves risks and issues, and provides direction to the PM for the day-to-day operations, to minimize impact to project scope, schedule, and budget.

Regular meetings are conducted (based on direction from the PSC) to provide project updates. Meetings focus on action items, scope change requests, and risks (issues impacting budget or timeliness). The meetings follow a standard agenda. Critical project needs are addressed and guidance and direction are requested from the PSC as appropriate. The PSC provides assessment and analysis, ensuring that supporting initiatives are based upon knowledgeable and information decisions.

A status report is prepared for each meeting and is distributed to each attendee. The member of the PSC will be determined at a project initiation.

Project Manager

The PM is responsible for the overall management and coordination of the work effort and successful completion of the BIS project. The PM monitors the day-to-day status of project team efforts. This includes establishing and maintaining the project management plan, assigning, directing, and monitoring the work of project staff, serving as FDLE's primary point of contact for the prime contractor, managing issues and risks, monitoring and reporting project status, and reviewing contract deliverables prior to delivery to the PSC for approval.

Project Team

The BIS Project Team consists of a core group of FDLE members responsible for the day-to-day tasks associated with the project. This team is comprised largely of members of Criminal Justice Information Services, Information Technology Services and any other positions (FTE or Contract) deemed necessary for the successful completion of the project.

Contract Manager

As a member of the Project Team, the Contract Manager is responsible for gathering the necessary information for developing the SOW and other contracting vehicles, monitoring the award of those contracts, ensuring performance delivery as required by the contract and closing out contracts when the tasks are completed. The Contract Manager works closely with FDLE contract and legal members to ensure that all work is accomplished within State and FDLE contracting rules and guidelines. The Contract Manager will coordinate budget issues and maintain awareness of all expenditures and accounts payable.

FDLE Implementation and Transition Unit (ITU)

Workgroups will assist the Project Team in ensuring that the BIS project meets the operational needs. SMEs, representatives from business operations, and IT are assigned to the project. Business staff consisting of management and Criminal Justice Information Consultants, is assembled to improve BIS. The unit is responsible for implementation and transition of external agencies to the new system, as well as for stakeholder and customer communication, education/training, preparation and readiness for the new technology. They will evaluate existing policies and determine whether modifications are needed, or if new policies need to be created, to mitigate privacy or other risks related to new services and business processes.

The ITU will serve as the conduit through which user community stakeholders and program personnel communicate, ensuring the resulting services are compliant with the mission. This includes policy identification/coordination for new services, questions for the record, and public inquires. This project will require extensive coordination with loyal agencies as they make modifications to their systems to become compliant with state specifications.

Quality Assurance Plan

The focus of the quality management process is to build effective processes that enable the production of high-quality deliverables that meet the specified business requirements. The quality management procedure consists of two principal processes: Quality Assurance (QA) and Quality Control (QC).

Quality Assurance

QA is the practice of adhering to planned, established and systematic approaches designed to ensure the high caliber of the deliverables and the detection and correction of any errors. It provides information about a common set of guidelines and standards to be applied by the Project Team. The primary aspect of a QA review is to ensure that the processes established for the project are being followed. If new processes are required, a group will be formed to establish the quality procedure. The benefits of following quality assurance processes include the following:

- Improved communication
- Improved planning and requirement gathering/definition processes
- Improved development process
- Improved product quality
- Better criteria for hardware and software testing
- Easier transition to production for hardware and software

The most effective QA activity is a formal QA review. The Project Team will conduct these reviews of project processes. Using results generated by this review, the PM will direct follow-up actions to ensure that the project uses sound processes. Additionally, the ESC will advise the PM of any observed deficiencies in processes and the PM will take corrective action to resolve the deficiency in the future.

Quality Control

QC activities are those focused on the inspection and/or testing of the deliverable produced. The QC Team will verify that the deliverables are of acceptable quality and that they are technically accurate. QC is the responsibility of the Project Team and the PM or Task Lead responsible for a deliverable. The PM will monitor the activities associated with the acceptance of deliverables. QC is conducted before a deliverable is submitted as final to be approved by the PM. The Project Manager is responsible for developing and maintaining a Quality Plan. The Quality Plan will document major deliverables of the project, completeness and correctness criteria, quality control activities and quality assurance activities.

Topics Addressed in the Quality Plan:

Quality Control activities associated with project deliverables:

- Document Deliverables
- Hardware and Software Deliverables
- Service Deliverables

Quality Assurance activities:

- QA processes (Requirements Traceability, Testing, Data Migration, etc.)
- Responsibility for QA processes

Quality Metrics for the project such as:

- Customer Satisfaction
- IT Satisfaction

- Vendor Satisfaction
- Changes in Scope
- Changes to Schedule
- Changes in Cost
- Number and Type of Issues
- Number and Type of Defects
- Preparedness of customer to assume production responsibilities
- Preparedness of IT to assume production responsibilities
- Solution “Fitness for Use”

System testing and operational acceptance testing will be the primary QC processes used to assure that deliverables meet FDLE’s documented requirements. System testing will involve specific testing and measurement at a technical level to verify compatibility, usability, performance, accuracy, and content of results.

External Project Oversight

Criminal and Juvenile Justice Information Systems Council (CJJIS)

The CJJIS Council was created by section 943.08, F.S., with the purpose to develop and implement a statewide strategy for identification, sharing, and coordination of criminal and juvenile justice data among federal, state and local criminal justice agencies. The Council is comprised by 15 members, consisting of representatives from the Attorney General, State Attorneys, Department of Law Enforcement, Department of Corrections, Parole Commission, Department of Juvenile Justice, Department of Highway Safety and Motor Vehicles, Department of Children and Families, Public Defenders and the Office of State Court Administrators. The Governor of Florida appoints two sheriffs, two police chiefs, and one clerk of court to the Council. With this broad representation of the criminal justice community, all issues receive a full and fair hearing from all perspectives.

Pursuant to Rule 74-1.009 F.A.C., this project will include the contracting of an independent verification and validation vendor to provide additional project oversight.

Change Management

Change management occurs throughout the lifecycle of the project. A change can be related to any facet of the project – scope creep, schedule revision, funding / cost changes, team / resource changes, issues and risks, etc.

If the change is minor (no change to scope, schedule or budget), the PM may determine the change can be met within current project parameters and the formal change process is not necessary. If the change could impact requirements, deliverables, payment schedule, cost, or completion date of a major milestone, the PM (or team member assigned) will fully research the impact of the project change and formulate a resolution. The PM will complete a formal Project Change Request form and present the change to the Project Steering Committee.

The Project Steering Committee will determine if the proposed change should be approved. Members of the Project Steering Committee will signify approval or disapproval of a proposed project change by signing the Project Change Request form.

The PM and Project Steering Committee must consult with FDLE Executive Management if the proposed change significantly alters requirements, deliverables, payment schedule, cost, or completion date of a major milestone. FDLE Executive Management will determine if the proposed change should be approved.

If the Project Steering Committee or FDLE Management determines that the approved project change will require a Contract Amendment, the PM will work with the vendor to prepare the Contract Amendment for the PSC's review and approval. The contract amendment will then be processed according to FDLE contract procedures.

Communications Plan

The PM will develop a Communications Plan to provide a framework for addressing change management with customers. The Communications Plan outlines a comprehensive strategy of both communicating project and process change information to the BIS customer base and others affected by the project as well as receiving and processing input/feedback from customers and others. The Communication Plan identifies communication strategies which will be used to target the different audience groups (users, stakeholders, advisors, media, decision-makers, etc.) via an assortment of communication methods (Internet and email, formal and informal documents, multi-media presentations, and face-to-face meetings). This document serves as the core of the BIS change management effort and will be updated throughout the life of the project.

Effective communication and outreach, both internal and external to FDLE is critical to the overall new repository statewide BIS during the design, development, and implementation phase of the project and to ensure increased understanding, involvement, and buy-in from all stakeholders. The objectives of the Communications Plan include the following:

- To ensure that target audiences are aware of and understand the purpose and mission of FDLE, particularly as it relates to crime statistics reporting, understand the rationale for development of a new system, and know what will and what will not change as a result of this project.
- To ensure that all audiences and stakeholder groups recognize the benefits of an updated reporting method, and how it will help organizations achieve their criminal justice objectives.
- To provide information to external customers on how implementation of the updated BIS may affect current and future work processes and what will be done to mitigate any perceived negative effects, address and clarify any unrealistic user expectations, and achieve "buy-in" from the internal and external user community.
- To maintain a dynamic and proactive communications campaign, in which information is updated and continuously provided for the benefit of the entire user community, and to establish a culture in which feedback is encouraged and is gathered and evaluated to ensure that project objectives will be met and project goals achieved.

The Project Manager is responsible for developing and maintaining a Communication Management Plan. This plan will document how and in what format information will be communicated, when and where communications are made, and who is responsible for providing each type of communication.

Topics included in the Communication Management Plan:

1. Target Audience - Identification of all possible audience groups in as much detail as possible:
 - Specific stakeholder groups (police departments, sheriffs' offices, etc.)
 - Project Team
 - Project Steering Committee
 - FDLE management
 - FDLE customers
 - Legislature

- Oversight agencies
2. Communication Method - Communications may be formal, such as status reports, Operational Work Plans, newsletters, and quarterly meetings or informal such as notices or announcements through email or website. Communications may also be in written form or face-to-face. Examples include such things as:
 - Status reports
 - Operational Work Plans
 - Stakeholder /customer surveys
 - Project newsletters
 - Pamphlets
 - Project website
 - Ad Hoc notices
 - Project Steering Committee meetings
 - Project Team meetings
 - FDLE Executive Management briefs
 3. Method of Delivery - Methods of delivery could be such things as:
 - Emails
 - Presentations
 - Reports
 - Website
 - Documents (electronic or paper)
 - Meetings
 4. Frequency
Some communications could be set at regular intervals such as meetings or reports required annually, quarterly, biweekly, etc. or upon specific project milestone or phase timelines according to project needs. Some communication could also be random and event-specific such as notices dealing with specific issues.
 5. Responsibility
Each type of communication must be assigned to the PM or a specific member of the Project Team.

Risk Management

The selected vendor(s) will provide a Risk Management Plan that describes the plan to manage risks throughout the life of the project. A risk refers to future conditions or circumstances, which will have an adverse impact on the project if they occur, that exist outside of the control of FDLE or the Project Team. In other words, a risk is a potential future problem. Risk management is performed continually over the life of the project. Risk management includes the following:

- Step 1: Identify major risks to project success
- Step 2: Assess the potential impact of each risk and its probability of occurrence
- Step 3: Determine appropriate contingency plans
- Step 4: Determine the acceptable level of tolerance for each risk
- Step 5: Specify mitigation strategies to be implemented for critical risks

Step 6: Periodically review the effectiveness of mitigation strategies and identify any new risks.

Risk identification occurs throughout the life of the project. Any project stakeholder, Project Team member, customer or contractor can submit a risk at any time. A risk mitigation session is conducted at the start of each build or phase. The PM will manage the FDLE risk documents which one of the artifacts maintained throughout the life of the project. Distribution of the risk document will be agreed upon between the FDLE and the vendor PM at the beginning of the engagement. The risk document will be an electronic document and available to the Project Team at all times during the project.

The PM (in consultation with the PSC) evaluates the risk and recommends a risk level. The risk level is used to set the priority of the risk and determine how risks should be addressed.

Risk management includes an ongoing cycle of risk identification, analysis and monitoring. FDLE uses TenStep to perform risk management. Each risk with a risk level of medium or high is evaluated to determine if the impact is severe enough that a risk mitigation plan should be created. If a risk mitigation plan is required, the risk is investigated to determine whether or not the resolution of a risk causes the budget, personnel, scope or schedule to change. In the event a risk mitigation plan must be exercised, project change control processes will be used (if necessary) and activities associated with the risk mitigation plan will be added to the Project Schedule to ensure the work is completed. The PM monitors all risk mitigation plans to ensure they are being executed successfully.

Implementation Plan

FDLE will develop the BIS technical specification using the existing BIS specification as the foundation. This specification will include complete documentation, data elements listings, diagrams, and sample data submission messages. FDLE will also establish a developer portal where vendors and agencies can download the technical specification, access documentation and software/tools, ask questions, and request assistance.

Once the sole source procurement contract is in place for the BIS, the vendor(s) will modify their products to meet FDLE's needs and adhere to the business process requirements and the functional and technical requirements defined by FDLE.

The projects will utilize an implementation plan for deploying the solutions to the production environment. The implementation plan identifies all activities required for successful deployment of the solutions for production use.

The implementation plan will include:

- Implementation Plan (Step-by-step instructions)
- Go-Live Schedule
- Implementation Approvals
- Implementation Communication Plan
- Dependencies
- Resource Requirements
- Failback Plan
- Post-Implementation Tasks

Appendix F – Risk Assessment Worksheet

FY 2021-22 Schedule IV-B for FIBRS

Appendix A – Acronyms and Definitions

Abbreviation / Acronym	Description
ASM	Application Security Module
BEBR	Bureau of Economic and Business Research at the University of Florida
BJS	Bureau of Justice Statistics, U.S. Department of Justice
CAD	Computer Aided Dispatch
CBA	Cost Benefit Analysis
CJIS	Criminal Justice Information Services
CJNET	Florida Criminal Justice Network. A communications network maintained by FDLE that provides access to state and national criminal justice resources relating to Law Enforcement, Judicial, and Correctional information.
COTS	Commercial Off-The-Shelf
CPU	Central Processing Unit
DABT	Florida Division of Alcoholic Beverages and Tobacco
DAO	Data Access Object
DMS	Department of Management Services
DMZ	Demilitarized Zone. In computer security, a DMZ is a physical or logical subnetwork that contains and exposes an organization's external-facing services to an untrusted network, usually a larger network such as the Internet.
DOJ	U.S. Department of Justice
FBI	Federal Bureau of Investigation
FDLE	Florida Department of Law Enforcement
FDSP	<p>Florida has two systems that agencies use to share record management system (RMS), jail management system (JMS), computer-aided dispatch (CAD), and other investigative data with each other and law enforcement partners outside of Florida. The Orlando region uses the Federated Integrated Network for Data Exchange and Retrieval (FINDER) and the remainder of the state uses the Naval Criminal Investigative Service's (NCIS) Law Enforcement Information Exchange (LInX) system. Both systems are integrated with each other and share data with other LInX systems around the United States including the Department of Defense Law Enforcement Defense Data Exchange (D-DEx).</p> <p>In both systems, the agency data is mapped into a common data format and</p>

Abbreviation / Acronym	Description
	<p>then stored in a database that is accessible to the other agencies. Collectively known as the Florida Data Sharing Project (FDSP), these systems capture most, but not all of the data elements required for NIBRS reporting. Data in the systems is updated by the agencies on a daily basis.</p> <p>Florida also participates in the FBI's National Data Exchange (N-DEx) system which is a national repository for a subset of the data stored in FDSP. Data is uploaded to N-DEx in the FBI National Information Exchange Model (NIEM) Information Exchange Package Documentation (IEPD) specification format.</p>
FHP	Florida Highway Patrol
FIBRS	Florida Incident Based Reporting System
FSAC	Florida Statistical Analysis Center
FWC	Florida Fish and Wildlife Conservation Commission
FY	Fiscal Year
GB	Gigabyte
IBR	Incident Based Reporting. A crime data collection approach consisting of details of criminal incidents, rather than summary counts as in SRS.
IEPD	Information Exchange Package Documentation. A NIEM specification for a specific data exchange. Contains data describing the structure, content, and other artifacts of the information exchange, supporting a specific set of business requirements.
IG	Inspector General
IT	Information Technology
ITS	Information Technology Services
Kentico	Webpage content management system
LBR	Legislative Budget Request
MDT	Mobile Data Terminal
N-DEx	FBI National Data Exchange. An unclassified national information sharing system that enables criminal justice agencies to search, link, analyze, and share local, state, tribal, and federal records. N-DEx contains incident, arrest, and booking reports; pretrial investigations; supervised released reports; calls for service; photos; and field contact/identification records. Includes over 3,000 data elements.
NCS-X	National Crime Statistics Exchange. An effort to expand the FBI's National

FY 2021-22 Schedule IV-B for FIBRS

Abbreviation / Acronym	Description
	Incident-Based Reporting System (NIBRS) into a nationally representative system of incident-based crime statistics. Managed by BJS and the FBI.
NIBRS	National Incident Based Reporting System. The FBI IBR used by law enforcement agencies in the U.S. for collecting and reporting crime data. Includes 58 data elements.
NIEM	National Information Exchange Model. An XML-based information exchange framework that defines a common vocabulary enabling efficient information exchange across diverse public and private organizations. Supported by DHS, DoD and DOJ.
NLETS	International Justice & Public Safety Network, formerly known as the National Law Enforcement Telecommunications System. Nationwide interstate justice and public safety network for the exchange of law enforcement-, criminal justice-, and public safety-related information.
ODBC	Open Database Connectivity
ORI	Originating Agency Identifier
OS	Operating System
PD	Police Department
PDF	Portable Document Format
R2	Release 2
RAM	Random Access Memory
RMS	Records Management System
SAN	Storage Area Network
SAS	Company name, originally known as Statistical Analysis System
SE	Standard Edition
SME	Subject Matter Expert
SO	Sheriff's Office
SQL	Structured Query Language
SRS	Summary Reporting System. A crime data collection approach consisting of counts of offenses and arrests for certain offense categories occurring over a period of time, rather than criminal incident details as in IBR.
UCR	Uniform Crime Reporting. An FBI program that compiles official data on crime in the United States. Includes SRS and NIBRS, as well as programs for Law

FY 2021-22 Schedule IV-B for FIBRS

Abbreviation / Acronym	Description
	Enforcement Officers Killed or Assaulted, Hate Crimes, Cargo Theft, and Human Trafficking reporting.
UCRDB	System name of one of FDLE's UCR database servers
UCRDBWEB	System name of one of FDLE's UCR database servers
UF	University of Florida
Use-of-Force	Use-of-Force. The FBI program to collect data on police-involved shootings and use of force, which includes any use of force that results in the death or serious bodily injury of a person, as well as when a law enforcement officer discharges a firearm at or in the direction of a person. Includes approximately 90 data elements.
XML	Extensible Markup Language

Appendix B – FDLE’s Information Technology Standards

The following IT standards have been adopted for FDLE’s information systems and services. The application of specific standards may depend on requirements of the systems and services. Questions should be directed to the Division of Information Technology Services.

- a. Architecture
 - Approved cloud computing service is authorized for FDLE applications.
 - Information systems will be developed to operate in a multi-tier architecture
 - Web-based interfaces will be used for the presentation (user) tier
 - Information systems will use load-balancing where appropriate
 - Information systems will operate on clustered server environments where appropriate
 - Development and testing will be performed on separate non-production servers
 - No data or transactions are to be lost due to isolated failures of equipment
- b. Servers
 - Servers will be scaled to handle large bursts of transactions on each interface where appropriate
 - Virtualization will be used when possible
 - Server operating systems will be either Red Hat Linux or Microsoft Windows Server
- c. Storage
 - Information systems will be designed to use redundant storage technologies in primary and backup or secondary (DR) sites
 - Backup and recovery processes will enable the recovery of data and software in the event that primary files are corrupted or destroyed
- d. Network
 - When officer or public safety is involved, CJNET will be the preferred network transport
 - Firewalls will be used to monitor and control incoming and outgoing network traffic
- e. Database
 - FDLE supports relational database(s) using either Oracle RDBMS, Microsoft SQL Server or MySQL
 - Audit logs will capture forensic metadata for all changes to data, including changes made by FDLE staff
- f. Application Software
 - Commercial software products must be reviewed and approved by ITS
 - Software development standards are specified in FDLE Development Standards Version 2.0
 - FDLE supports software development using Java EE or Microsoft .NET
 - Java development standards are specified in Java Development Standards Version 2.0
 - Web-based application standards are specified in JSF Web Framework Standards Version 2.0
 - JBoss is the preferred application server platform used for FDLE information systems
 - Web Services should be used where possible when application communicates outside the agency
- g. Security
 - 28 CFR Part 20 and Public Law 92-544, regulates sharing criminal justice information with criminal justice and non-criminal justice governmental agencies

- Systems that store or process criminal history information shall meet the FBI CJIS Security Policy (CSP)
- Florida Statutes
 - Chapter 119, F.S. – Public Records
 - Section 282.318, F.S. – Security of data and information technology
 - Section 501.171, F.S. – Security of confidential personal information
 - Chapter 943, F.S. – Department of Law Enforcement
- Administrative Rules
 - 60GG-2, F.A.C., Information Security
 - 60GG-4, F.A.C. – Cloud Computing
 - 60GG-5, F.A.C. – Information Technology Architecture Standards
- FDLE Policies -
 - 1.4 – Use of FDLE Resources
 - 2.5 – Information Security
 - 2.6 – Acceptable Use of Information Technology
 - 3.1 – Background Investigations.

- Cloud Computing
 - Microsoft Azure Security Best Practices
- Industry Standards – Where applicable, compliance with the following standards is preferred:
 - Lightweight Directory Access Protocol (LDAP)/Active Directory (AD)
 - Security Assertion Markup Language (SAML)
 - Global Federated Identity and Privilege Management (GFIPM)

- h. Availability
 - FDLE’s standards on availability: minimum 99.5% uptime

- i. Data Communication Standards
 - Sections 282.701 to 282.711, F.S. – Communication Information Technology Services Act
 - National Information Exchange Model (NIEM)
 - FBI Criminal Justice Information Services (CJIS) Standards, including those associated with;
 - National Crime Information Center (NCIC)
 - Interstate Identification Index (III)
 - National Fingerprint File (NFF)
 - National Instant Criminal Background Check System (NICS)
 - National Data Exchange (N-Dex)

- j. Accessibility
 - United States Rehabilitation Act – Section 508 details accessibility standards for all systems
 - Section 282.601 to 282.606, F.S. – Accessibility of Information and Technology

- k. Desktop Computing
 - Microsoft Windows Operating System
 - Microsoft Office
 - Microsoft Visio
 - Microsoft Project
 - Adobe Acrobat

I. Project Management

- Sections 282.003 to 282.318, F.S. – Information Technology Management Act
- Rule 60GG-1, F.A.C. – Project Management and Oversight Standards
- Project Management Institute, Project Management Body of Knowledge (PMBOK)
- All production deployments must follow ITS procedure 5.1 “Production Change” CCCB

m. Deviations from these standards must be directed ITS for review and approval.

n. All identified technologies must be in a supported version

1	Agency: Florida Department of Law Enforcement		Project: Biometric Identification Solution Modernization	
3	Section 1 -- Strategic Area			
4	#	Criteria	Values	Answer
5	1.01	Are project objectives clearly aligned with the agency's legal mission?	0% to 40% -- Few or no objectives aligned	81% to 100% -- All or nearly all objectives aligned
6			41% to 80% -- Some objectives aligned	
7			81% to 100% -- All or nearly all objectives aligned	
8	1.02	Are project objectives clearly documented and understood by all stakeholder groups?	Not documented or agreed to by stakeholders	Informal agreement by stakeholders
9			Informal agreement by stakeholders	
10			Documented with sign-off by stakeholders	
11	1.03	Are the project sponsor, senior management, and other executive stakeholders actively involved in meetings for the review and success of the project?	Not or rarely involved	Most regularly attend executive steering committee meetings
12			Most regularly attend executive steering committee meetings	
13			Project charter signed by executive sponsor and executive team actively engaged in steering committee meetings	
14	1.04	Has the agency documented its vision for how changes to the proposed technology will improve its business processes?	Vision is not documented	Vision is completely documented
15			Vision is partially documented	
16			Vision is completely documented	
17	1.05	Have all project business/program area requirements, assumptions, constraints, and priorities been defined and documented?	0% to 40% -- Few or none defined and documented	41% to 80% -- Some defined and documented
18			41% to 80% -- Some defined and documented	
19			81% to 100% -- All or nearly all defined and documented	
20	1.06	Are all needed changes in law, rule, or policy identified and documented?	No changes needed	No changes needed
21			Changes unknown	
22			Changes are identified in concept only	
23			Changes are identified and documented	
24			Legislation or proposed rule change is drafted	
25	1.07	Are any project phase or milestone completion dates fixed by outside factors, e.g., state or federal law or funding restrictions?	Few or none	Few or none
26			Some	
27			All or nearly all	
28	1.08	What is the external (e.g. public) visibility of the proposed system or project?	Minimal or no external use or visibility	Extensive external use or visibility
29			Moderate external use or visibility	
30			Extensive external use or visibility	
31	1.09	What is the internal (e.g. state agency) visibility of the proposed system or project?	Multiple agency or state enterprise visibility	Multiple agency or state enterprise visibility
32			Single agency-wide use or visibility	
33			Use or visibility at division and/or bureau level only	
34	1.10	Is this a multi-year project?	Greater than 5 years	Greater than 5 years
35			Between 3 and 5 years	
36			Between 1 and 3 years	
37			1 year or less	

	B	C	D	E
1	Agency: Florida Department of Law Enforcement		Project: Biometric Identification Solution Modernization	
3	Section 2 -- Technology Area			
4	#	Criteria	Values	Answer
5	2.01	Does the agency have experience working with, operating, and supporting the proposed technical solution in a production environment?	Read about only or attended conference and/or vendor presentation	Installed and supported production system more than 3 years
6			Supported prototype or production system less than 6 months	
7			Supported production system 6 months to 12 months	
8			Supported production system 1 year to 3 years	
9			Installed and supported production system more than 3 years	
10	2.02	Does the agency's internal staff have sufficient knowledge of the proposed technical solution to implement and operate the new system?	External technical resources will be needed for implementation and operations	External technical resources will be needed for implementation and operations
11			External technical resources will be needed through implementation only	
12			Internal resources have sufficient knowledge for implementation and operations	
13	2.03	Have all relevant technical alternatives/ solution options been researched, documented and considered?	No technology alternatives researched	Some alternatives documented and considered
14			Some alternatives documented and considered	
15			All or nearly all alternatives documented and considered	
16	2.04	Does the proposed technical solution comply with all relevant agency, statewide, or industry technology standards?	No relevant standards have been identified or incorporated into proposed technology	Proposed technology solution is fully compliant with all relevant agency, statewide, or industry standards
17			Some relevant standards have been incorporated into the proposed technology	
18			Proposed technology solution is fully compliant with all relevant agency, statewide, or industry standards	
19	2.05	Does the proposed technical solution require significant change to the agency's existing technology infrastructure?	Minor or no infrastructure change required	Minor or no infrastructure change required
20			Moderate infrastructure change required	
21			Extensive infrastructure change required	
22			Complete infrastructure replacement	
23	2.06	Are detailed hardware and software capacity requirements defined and documented?	Capacity requirements are not understood or defined	Capacity requirements are defined only at a conceptual level
24			Capacity requirements are defined only at a conceptual level	
25			Capacity requirements are based on historical data and new system design specifications and performance requirements	

	B	C	D	E
1	Agency: Florida Department of Law Enforcement		Project: Biometric Identification Solution Modernization	
3	Section 3 -- Organizational Change Management Area			
4	#	Criteria	Values	Answer
5	3.01	What is the expected level of organizational change that will be imposed within the agency if the project is successfully implemented?	Extensive changes to organization structure, staff or business processes	Minimal changes to organization structure, staff or business processes structure
6			Moderate changes to organization structure, staff or business processes	
7			Minimal changes to organization structure, staff or business processes structure	
8	3.02	Will this project impact essential business processes?	Yes	No
9			No	
10	3.03	Have all business process changes and process interactions been defined and documented?	0% to 40% -- Few or no process changes defined and documented	41% to 80% -- Some process changes defined and documented
11			41% to 80% -- Some process changes defined and documented	
12			81% to 100% -- All or nearly all processes defined and documented	
13	3.04	Has an Organizational Change Management Plan been approved for this project?	Yes	No
14			No	
15	3.05	Will the agency's anticipated FTE count change as a result of implementing the project?	Over 10% FTE count change	Less than 1% FTE count change
16			1% to 10% FTE count change	
17			Less than 1% FTE count change	
18	3.06	Will the number of contractors change as a result of implementing the project?	Over 10% contractor count change	1 to 10% contractor count change
19			1 to 10% contractor count change	
20			Less than 1% contractor count change	
21	3.07	What is the expected level of change impact on the citizens of the State of Florida if the project is successfully implemented?	Extensive change or new way of providing/receiving services or information)	Minor or no changes
22			Moderate changes	
23			Minor or no changes	
24	3.08	What is the expected change impact on other state or local government agencies as a result of implementing the project?	Extensive change or new way of providing/receiving services or information	Minor or no changes
25			Moderate changes	
26			Minor or no changes	
27	3.09	Has the agency successfully completed a project with similar organizational change requirements?	No experience/Not recently (>5 Years)	Recently completed project with greater change requirements
28			Recently completed project with fewer change requirements	
29			Recently completed project with similar change requirements	
30			Recently completed project with greater change requirements	

	B	C	D	E
1	Agency: Agency Name		Project: Project Name	
3	Section 4 -- Communication Area			
4	#	Criteria	Value Options	Answer
5	4.01	Has a documented Communication Plan been approved for this project?	Yes	No
6			No	
7	4.02	Does the project Communication Plan promote the collection and use of feedback from management, project team, and business stakeholders (including end users)?	Negligible or no feedback in Plan	Routine feedback in Plan
8			Routine feedback in Plan	
9			Proactive use of feedback in Plan	
10	4.03	Have all required communication channels been identified and documented in the Communication Plan?	Yes	No
11			No	
12	4.04	Are all affected stakeholders included in the Communication Plan?	Yes	No
13			No	
14	4.05	Have all key messages been developed and documented in the Communication Plan?	Plan does not include key messages	Plan does not include key messages
15			Some key messages have been developed	
16			All or nearly all messages are documented	
17	4.06	Have desired message outcomes and success measures been identified in the Communication Plan?	Plan does not include desired messages outcomes and success measures	Plan does not include desired messages outcomes and success measures
18			Success measures have been developed for some messages	
19			All or nearly all messages have success measures	
20	4.07	Does the project Communication Plan identify and assign needed staff and resources?	Yes	No
21			No	

	B	C	D	E
1		Agency: Florida Department of Law Enforcement	Project: Biometric Identification Solution Modernization	
3		Section 5 -- Fiscal Area		
4	#	Criteria	Values	Answer
5	5.01	Has a documented Spending Plan been approved for the entire project lifecycle?	Yes	No
6			No	
7	5.02	Have all project expenditures been identified in the Spending Plan?	0% to 40% -- None or few defined and documented	41% to 80% -- Some defined and documented
8			41% to 80% -- Some defined and documented	
9			81% to 100% -- All or nearly all defined and documented	
10	5.03	What is the estimated total cost of this project over its entire lifecycle?	Unknown	Greater than \$10 M
11			Greater than \$10 M	
12			Between \$2 M and \$10 M	
13			Between \$500K and \$1,999,999	
14			Less than \$500 K	
15	5.04	Is the cost estimate for this project based on quantitative analysis using a standards-based estimation model?	Yes	Yes
16			No	
17	5.05	What is the character of the cost estimates for this project?	Detailed and rigorous (accurate within ±10%)	Order of magnitude – estimate could vary between 10-100%
18			Order of magnitude – estimate could vary between 10-100%	
19			Placeholder – actual cost may exceed estimate by more than 100%	
20	5.06	Are funds available within existing agency resources to complete this project?	Yes	No
21			No	
22	5.07	Will/should multiple state or local agencies help fund this project or system?	Funding from single agency	Funding from single agency
23			Funding from local government agencies	
24			Funding from other state agencies	
25	5.08	If federal financial participation is anticipated as a source of funding, has federal approval been requested and received?	Neither requested nor received	Neither requested nor received
26			Requested but not received	
27			Requested and received	
28			Not applicable	
29	5.09	Have all tangible and intangible benefits been identified and validated as reliable and achievable?	Project benefits have not been identified or validated	All or nearly all project benefits have been identified and validated
30			Some project benefits have been identified but not validated	
31			Most project benefits have been identified but not validated	
32			All or nearly all project benefits have been identified and validated	
33	5.10	What is the benefit payback period that is defined and documented?	Within 1 year	No payback
34			Within 3 years	
35			Within 5 years	
36			More than 5 years	
37			No payback	
38	5.11	Has the project procurement strategy been clearly determined and agreed to by affected stakeholders?	Procurement strategy has not been identified and documented	Stakeholders have not been consulted re: procurement strategy
39			Stakeholders have not been consulted re: procurement strategy	
40			Stakeholders have reviewed and approved the proposed procurement strategy	
41	5.12	What is the planned approach for acquiring necessary products and solution services to successfully complete the project?	Time and Expense (T&E)	Combination FFP and T&E
42			Firm Fixed Price (FFP)	
43			Combination FFP and T&E	
44	5.13	What is the planned approach for procuring hardware and software for the project?	Timing of major hardware and software purchases has not yet been determined	Just-in-time purchasing of hardware and software is documented in the project schedule
45			Purchase all hardware and software at start of project to take advantage of one-time discounts	
46			Just-in-time purchasing of hardware and software is documented in the project schedule	
47	5.14	Has a contract manager been assigned to this project?	No contract manager assigned	Contract manager assigned is not the procurement manager or the project manager
48			Contract manager is the procurement manager	
49			Contract manager is the project manager	
50			Contract manager assigned is not the procurement manager or the project manager	
51	5.15	Has equipment leasing been considered for the project's large-scale computing purchases?	Yes	Yes
52			No	
53	5.16	Have all procurement selection criteria and outcomes been clearly identified?	No selection criteria or outcomes have been identified	Some selection criteria and outcomes have been defined and documented
54			Some selection criteria and outcomes have been defined and documented	
55			All or nearly all selection criteria and expected outcomes have been defined and documented	
56	5.17	Does the procurement strategy use a multi-stage evaluation process to progressively narrow the field of prospective vendors to the single, best qualified candidate?	Procurement strategy has not been developed	Multi-stage evaluation not planned/used for procurement
57			Multi-stage evaluation not planned/used for procurement	
58			Multi-stage evaluation and proof of concept or prototype planned/used to select best qualified vendor	
59	5.18	For projects with total cost exceeding \$10 million, did/will the procurement strategy require a proof of concept or prototype as part of the bid response?	Procurement strategy has not been developed	Yes, bid response did/will include proof of concept or prototype
60			No, bid response did/will not require proof of concept or prototype	
61			Yes, bid response did/will include proof of concept or prototype	
62			Not applicable	

	B	C	D	E
1	Agency: Florida Department of Law Enforcement		Project: Biometric Identification Solution Modernization	
3	Section 6 -- Project Organization Area			
4	#	Criteria	Values	Answer
5	6.01	Is the project organization and governance structure clearly defined and documented within an approved project plan?	Yes	No
6			No	
7	6.02	Have all roles and responsibilities for the executive steering committee been clearly identified?	None or few have been defined and documented	All or nearly all have been defined and documented
8			Some have been defined and documented	
9			All or nearly all have been defined and documented	
10	6.03	Who is responsible for integrating project deliverables into the final solution?	Not yet determined	System Integrator (contractor)
11			Agency	
12			System Integrator (contractor)	
13	6.04	How many project managers and project directors will be responsible for managing the project?	3 or more	3 or more
14			2	
15			1	
16	6.05	Has a project staffing plan specifying the number of required resources (including project team, program staff, and contractors) and their corresponding roles, responsibilities and needed skill levels been developed?	Needed staff and skills have not been identified	Some or most staff roles and responsibilities and needed skills have been identified
17			Some or most staff roles and responsibilities and needed skills have been identified	
18			Staffing plan identifying all staff roles, responsibilities, and skill levels have been documented	
19	6.06	Is an experienced project manager dedicated fulltime to the project?	No experienced project manager assigned	Yes, experienced project manager dedicated full-time, 100% to project
20			No, project manager is assigned 50% or less to project	
21			No, project manager assigned more than half-time, but less than full-time to project	
22			Yes, experienced project manager dedicated full-time, 100% to project	
23	6.07	Are qualified project management team members dedicated full-time to the project	None	No, business, functional or technical experts dedicated more than half-time but less than full-time to project
24			No, business, functional or technical experts dedicated 50% or less to project	
25			No, business, functional or technical experts dedicated more than half-time but less than full-time to project	
26			Yes, business, functional or technical experts dedicated full-time, 100% to project	
27	6.08	Does the agency have the necessary knowledge, skills, and abilities to staff the project team with in-house resources?	Few or no staff from in-house resources	Mostly staffed from in-house resources
28			Half of staff from in-house resources	
29			Mostly staffed from in-house resources	
30			Completely staffed from in-house resources	
31	6.09	Is agency IT personnel turnover expected to significantly impact this project?	Minimal or no impact	Minimal or no impact
32			Moderate impact	
33			Extensive impact	
34	6.10	Does the project governance structure establish a formal change review and control board to address proposed changes in project scope, schedule, or cost?	Yes	Yes
35			No	
36	6.11	Are all affected stakeholders represented by functional manager on the change review and control board?	No board has been established	No, all stakeholders are not represented on the board
37			No, only IT staff are on change review and control board	
38			No, all stakeholders are not represented on the board	
39			Yes, all stakeholders are represented by functional manager	

	B	C	D	E
1	Agency: Florida Department of Law Enforcement		Project: Biometric Identification Solution Modernization	
3	Section 7 -- Project Management Area			
4	#	Criteria	Values	Answer
5	7.01	Does the project management team use a standard commercially available project management methodology to plan, implement, and control the project?	No	Yes
6			Project Management team will use the methodology selected by the systems integrator	
7			Yes	
8	7.02	For how many projects has the agency successfully used the selected project management methodology?	None	More than 3
9			1-3	
10			More than 3	
11	7.03	How many members of the project team are proficient in the use of the selected project management methodology?	None	Some
12			Some	
13			All or nearly all	
14	7.04	Have all requirements specifications been unambiguously defined and documented?	0% to 40% -- None or few have been defined and documented	41 to 80% -- Some have been defined and documented
15			41 to 80% -- Some have been defined and documented	
16			81% to 100% -- All or nearly all have been defined and documented	
17	7.05	Have all design specifications been unambiguously defined and documented?	0% to 40% -- None or few have been defined and documented	41 to 80% -- Some have been defined and documented
18			41 to 80% -- Some have been defined and documented	
19			81% to 100% -- All or nearly all have been defined and documented	
20	7.06	Are all requirements and design specifications traceable to specific business rules?	0% to 40% -- None or few are traceable	41 to 80% -- Some are traceable
21			41 to 80% -- Some are traceable	
22			81% to 100% -- All or nearly all requirements and specifications are traceable	
23	7.07	Have all project deliverables/services and acceptance criteria been clearly defined and documented?	None or few have been defined and documented	Some deliverables and acceptance criteria have been defined and documented
24			Some deliverables and acceptance criteria have been defined and documented	
25			All or nearly all deliverables and acceptance criteria have been defined and documented	
26	7.08	Is written approval required from executive sponsor, business stakeholders, and project manager for review and sign-off of major project deliverables?	No sign-off required	Review and sign-off from the executive sponsor, business stakeholder, and project manager are required on all major project deliverables
27			Only project manager signs-off	
28			Review and sign-off from the executive sponsor, business stakeholder, and project manager are required on all major project deliverables	
29	7.09	Has the Work Breakdown Structure (WBS) been defined to the work package level for all project activities?	0% to 40% -- None or few have been defined to the work package level	0% to 40% -- None or few have been defined to the work package level
30			41 to 80% -- Some have been defined to the work package level	
31			81% to 100% -- All or nearly all have been defined to the work package level	
32	7.10	Has a documented project schedule been approved for the entire project lifecycle?	Yes	No
33			No	
34	7.11	Does the project schedule specify all project tasks, go/no-go decision points (checkpoints), critical milestones, and resources?	Yes	No
35			No	
36	7.12	Are formal project status reporting processes documented and in place to manage and control this project?	No or informal processes are used for status reporting	Project team and executive steering committee use formal status reporting processes
37			Project team uses formal processes	
38			Project team and executive steering committee use formal status reporting processes	
39	7.13	Are all necessary planning and reporting templates, e.g., work plans, status reports, issues and risk management, available?	No templates are available	All planning and reporting templates are available
40			Some templates are available	
41			All planning and reporting templates are available	
42	7.14	Has a documented Risk Management Plan been approved for this project?	Yes	No
43			No	
44	7.15	Have all known project risks and corresponding mitigation strategies been identified?	None or few have been defined and documented	Some have been defined and documented
45			Some have been defined and documented	
46			All known risks and mitigation strategies have been defined	
47	7.16	Are standard change request, review and approval processes documented and in place for this project?	Yes	Yes
48			No	
49	7.17	Are issue reporting and management processes documented and in place for this project?	Yes	Yes
50			No	

	B	C	D	E
1	Agency: Florida Department of Law Enforcement		Project: Biometric Identification Solution Modernization	
2				
3	Section 8 -- Project Complexity Area			
4	#	Criteria	Values	Answer
5	8.01	How complex is the proposed solution compared to the current agency systems?	Unknown at this time	Similar complexity
6			More complex	
7			Similar complexity	
8			Less complex	
9	8.02	Are the business users or end users dispersed across multiple cities, counties, districts, or regions?	Single location	More than 3 sites
10			3 sites or fewer	
11			More than 3 sites	
12	8.03	Are the project team members dispersed across multiple cities, counties, districts, or regions?	Single location	More than 3 sites
13			3 sites or fewer	
14			More than 3 sites	
15	8.04	How many external contracting or consulting organizations will this project require?	No external organizations	1 to 3 external organizations
16			1 to 3 external organizations	
17			More than 3 external organizations	
18	8.05	What is the expected project team size?	Greater than 15	9 to 15
19			9 to 15	
20			5 to 8	
21			Less than 5	
22	8.06	How many external entities (e.g., other agencies, community service providers, or local government entities) will be impacted by this project or system?	More than 4	More than 4
23			2 to 4	
24			1	
25			None	
26	8.07	What is the impact of the project on state operations?	Business process change in single division or bureau	Statewide or multiple agency business process change
27			Agency-wide business process change	
28			Statewide or multiple agency business process change	
29	8.08	Has the agency successfully completed a similarly-sized project when acting as Systems Integrator?	Yes	Yes
30			No	
31	8.09	What type of project is this?	Infrastructure upgrade	Combination of the above
32			Implementation requiring software development or purchasing commercial off the shelf (COTS) software	
33			Business Process Reengineering	
34			Combination of the above	
35	8.10	Has the project manager successfully managed similar projects to completion?	No recent experience	Similar size and complexity
36			Lesser size and complexity	
37			Similar size and complexity	
38			Greater size and complexity	
39	8.11	Does the agency management have experience governing projects of equal or similar size and complexity to successful completion?	No recent experience	Greater size and complexity
40			Lesser size and complexity	
41			Similar size and complexity	
42			Greater size and complexity	

SCHEDULE IX: MAJOR AUDIT FINDINGS AND RECOMMENDATIONS

Budget Period: 2019-2020

Department: Office of Inspector General

Chief Internal Auditor: Lourdes Howell-Thomas

Budget Entity: 710000

Phone Number: 850-410-7241

(1)	(2)	(3)	(4)	(5)	(6)
REPORT NUMBER	PERIOD ENDING	UNIT/AREA	SUMMARY OF FINDINGS AND RECOMMENDATIONS	SUMMARY OF CORRECTIVE ACTION TAKEN	ISSUE CODE
IA-1617-01	Report date: 4/28/2020	Investigations and Forensic Science/ Business Support Program	This audit is confidential. The objectives of this audit were to determine if Information and Evidence (I&E) Funds were issued and used in compliance with policies and procedures as well as to review I&E Funds to detect fraud or potential fraud and identify any weak or non-existent internal controls. Eleven (11) findings with forty-three (43) recommendations were identified.	Management agreed with all findings and forty-one (41) out of forty-three (43) recommendations. Corrective actions are in progress.	
Auditor General Report No: 2020-062	Report date: 11/1/2019	Investigations and Forensic Science/ Information Technology Services	Finding No. 1: Aircraft Services Records and Charges. <u>Recommendation:</u> We recommend that Department management enhance Department procedures to: <ul style="list-style-type: none"> •Require Department records evidence the individual passengers on each Department flight, including the purpose of each individual passenger’s travel and whether the travel was for official State business. •Ensure passengers not traveling on official State business are charged a prorated portion of the cost of each flight in accordance with State law. •Ensure charges per flight hour are calculated based on actual fixed and variable costs related to the ownership, operation, and use of each Department aircraft. •Ensure AIMS accurately reflects the Department’s established cost per flight hour for each Department aircraft. Finding No. 2: Aircraft Access Controls <u>Recommendation:</u> We recommend that Department management strengthen certain aircraft access controls.	Corrective actions are in progress.	

Finding No. 3: AIMS Access Privilege Controls

Recommendation: We recommend that Department management enhance controls to ensure that periodic AIMS user access privilege reviews are performed and documented in Department records. We also recommend that Department management enhance procedures to provide for the immediate notification of employment separations and removal of corresponding AIMS user access privileges and designate a position responsible for ensuring that AIMS user access privileges are removed when the AIMS Administrator is unavailable.

Finding No. 4: Retention of Text Messages

Recommendation: To ensure that text messages are retained in accordance with State law, we recommend that Department management make or obtain independent and periodic assessments of the service organization’s relevant internal controls. In addition, the Department should enhance policies and procedures to either prohibit Department employees from using their personal devices to send or receive text messages pertaining to official State business or provide for the retention of such messages.

Finding No. 5: Mental Competency Application Records

Recommendation: We recommend that Department management enhance procedures to monitor the timeliness of entries into the MECOM application and continue to work with the Clerks to ensure that adjudication of mental defectiveness and court-ordered mental institution commitment records are timely entered into the MECOM application as required by State law.

In addition, we recommend that Department management enhance controls to ensure that Department records evidence timely communication with Clerks who do not report adjudications of mental defectiveness or court-ordered mental institution commitments.

Fiscal Year 2021-22 LBR Technical Review Checklist

Department/Budget Entity (Service): Florida Department of Law Enforcement

Agency Budget Officer/OPB Analyst Name: Cynthia Barr

A "Y" indicates "YES" and is acceptable, an "N/J" indicates "NO/Justification Provided" - these require further explanation/justification (additional sheets can be used as necessary), and "TIPS" are other areas to consider.

Action	Program or Service (Budget Entity Codes)									
	71150200	71150300	71550100	71600100	71600200	71600300	71700100	71700200	71800100	71800200

1. GENERAL

<p>1.1 Are Columns A01, A04, A05, A91, A92, A93, A94, A95, A96, A36, A10, IA1, IA4, IA5, IA6, IP1, IV1, IV3 and NV1 set to TRANSFER CONTROL for DISPLAY status and MANAGEMENT CONTROL for UPDATE status for both the Budget and Trust Fund columns (no trust fund files for narrative columns)? Is Column A02 set to TRANSFER CONTROL for DISPLAY status and MANAGEMENT CONTROL for UPDATE status for the Trust Fund Files (the Budget Files should already be on TRANSFER CONTROL for DISPLAY and MANAGEMENT CONTROL for UPDATE)? Are Columns A06, A07, A08 and A09 for Fixed Capital Outlay (FCO) set to TRANSFER CONTROL for DISPLAY status only (UPDATE status remains on OWNER)? (CSDI or Web LBR Column Security)</p>	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
<p>1.2 Is Column A03 set to TRANSFER CONTROL for DISPLAY and UPDATE status for both the Budget and Trust Fund columns? (CSDI)</p>	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y

AUDITS:

<p>1.3 Have Column A03 budget files been copied to Column A12? Run the Exhibit B Audit Comparison Report to verify. (EXBR, EXBA)</p>	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
<p>1.4 Have Column A03 trust fund files been copied to Column A12? Run Schedule I (SC1R, SC1 or SC1R, SC1D adding column A12) to verify.</p>	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
<p>1.5 Has Column A12 security been set correctly to ALL for DISPLAY status and MANAGEMENT CONTROL for UPDATE status for Budget and Trust Fund files? (CSDR, CSA)</p>	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y

TIP The agency should prepare the budget request for submission in this order: 1) Copy Column A03 to Column A12, and 2) Lock columns as described above. A security control feature included in the LAS/PBS Web upload process requires columns to be in the proper status before uploading to the portal.

Action	Program or Service (Budget Entity Codes)									
	71150200	71150300	71550100	71600100	71600200	71600300	71700100	71700200	71800100	71800200

2. EXHIBIT A (EADR, EXA)

2.1	Is the budget entity authority and description consistent with the agency's LRPP and does it conform to the directives provided on page 58 of the LBR Instructions?	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
2.2	Are the statewide issues generated systematically (estimated expenditures, nonrecurring expenditures, etc.) included?	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
2.3	Are the issue codes and titles consistent with <i>Section 3</i> of the LBR Instructions (pages 15 through 28)? Do they clearly describe the issue?	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y

3. EXHIBIT B (EXBR, EXB)

3.1	Is it apparent that there is a fund shift where an appropriation category's funding source is different between A02 and A03? Were the issues entered into LAS/PBS correctly? Check D-3A funding shift issue 340XXX0 - a unique deduct and unique add back issue should be used to ensure fund shifts display correctly on the LBR exhibits.	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A
-----	---	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----

AUDITS:

3.2	Negative Appropriation Category Audit for Agency Request (Columns A03 and A04): Are all appropriation categories positive by budget entity and program component at the FSI level? Are all nonrecurring amounts less than requested amounts? (NACR, NAC - Report should print "No Negative Appropriation Categories Found")	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
3.3	Current Year Estimated Verification Comparison Report: Is Column A02 equal to Column B07? (EXBR, EXBC - Report should print "Records Selected Net To Zero")	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y

TIP	Generally look for and be able to fully explain significant differences between A02 and A03.										
TIP	Exhibit B - A02 equal to B07: Compares Current Year Estimated column to a backup of A02. This audit is necessary to ensure that the historical detail records have not been adjusted. Records selected should net to zero.										
TIP	Requests for appropriations which require advance payment authority must use the sub-title "Grants and Aids". For advance payment authority to local units of government, the Aid to Local Government appropriation category (05XXXX) should be used. For advance payment authority to non-profit organizations or other units of state government, a Special Categories appropriation category (10XXXX) should be used.										

Action	Program or Service (Budget Entity Codes)									
	71150200	71150300	71550100	71600100	71600200	71600300	71700100	71700200	71800100	71800200

4. EXHIBIT D (EADR, EXD)										
4.1	Is the program component objective statement consistent with the agency LRPP, and does it conform to the directives provided on page 61 of the LBR Instructions?	Y	Y	Y	Y	Y	Y	Y	Y	Y
4.2	Is the program component code and title used correct?	Y	Y	Y	Y	Y	Y	Y	Y	Y
TIP	Fund shifts or transfers of services or activities between program components will be displayed on an Exhibit D whereas it may not be visible on an Exhibit A.									

5. EXHIBIT D-1 (ED1R, EXD1)										
5.1	Are all object of expenditures positive amounts? (This is a manual check.)	Y	Y	Y	Y	Y	Y	Y	Y	Y

AUDITS:										
5.2	Do the fund totals agree with the object category totals within each appropriation category? (ED1R, XD1A - Report should print "No Differences Found For This Report")	Y	Y	Y	Y	Y	Y	Y	Y	Y
5.3	FLAIR Expenditure/Appropriation Ledger Comparison Report: Is Column A01 less than Column B04? (EXBR, EXBB - Negative differences [with a \$5,000 allowance] need to be corrected in Column A01.)	Y	Y	Y	Y	Y	Y	Y	Y	Y
5.4	A01/State Accounts Disbursements and Carry Forward Comparison Report: Does Column A01 equal Column B08? (EXBR, EXBD - Differences [with a \$5,000 allowance at the department level] need to be corrected in Column A01.)	Y	Y	Y	Y	Y	Y	Y	Y	Y
TIP	If objects are negative amounts, the agency must make adjustments to Column A01 to correct the object amounts. In addition, the fund totals must be adjusted to reflect the adjustment made to the object data.									
TIP	If fund totals and object totals do not agree or negative object amounts exist, the agency must adjust Column A01.									
TIP	Exhibit B - A01 less than B04: This audit is to ensure that the disbursements and carry/certifications forward in A01 are less than FY 2019-20 approved budget. Amounts should be positive. The \$5,000 allowance is necessary for rounding.									
TIP	If B08 is not equal to A01, check the following: 1) the initial FLAIR disbursements or carry forward data load was corrected appropriately in A01; 2) the disbursement data from departmental FLAIR was reconciled to State Accounts; and 3) the FLAIR disbursements did not change after Column B08 was created. Note that there is a \$5,000 allowance at the department level.									

6. EXHIBIT D-3 (ED3R, ED3) (Not required in the LBR - for analytical purposes only.)										
6.1	Are issues appropriately aligned with appropriation categories?	Y	Y	Y	Y	Y	Y	Y	Y	Y

	Program or Service (Budget Entity Codes)									
Action	71150200	71150300	71550100	71600100	71600200	71600300	71700100	71700200	71800100	71800200

TIP Exhibit D-3 is not required in the budget submission but may be needed for this particular appropriation category/issue sort. Exhibit D-3 is also a useful report when identifying negative appropriation category problems.	
---	--

7. EXHIBIT D-3A (EADR, ED3A) (Required to be posted to the Florida Fiscal Portal)

7.1	Are the issue titles correct and do they clearly identify the issue? (See pages 15 through 28 of the LBR Instructions.)	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
7.2	Does the issue narrative adequately explain the agency's request and is the explanation consistent with the LRPP? (See pages 66 through 68 of the LBR Instructions.)	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
7.3	Does the narrative for Information Technology (IT) issue follow the additional narrative requirements described on pages 68 through 70 of the LBR Instructions?	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
7.4	Are all issues with an IT component identified with a "Y" in the "IT COMPONENT?" field? If the issue contains an IT component, has that component been identified and documented?	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
7.5	Does the issue narrative explain any variances from the Standard Expense and Human Resource Services Assessments package? Is the nonrecurring portion in the nonrecurring column? (See pages E.4 through E.6 of the LBR Instructions.)	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A
7.6	Does the salary rate request amount accurately reflect any new requests and are the amounts proportionate to the Salaries and Benefits request? Note: Salary rate should always be annualized.	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A
7.7	Does the issue narrative thoroughly explain/justify all Salaries and Benefits amounts entered into the Other Salary Amounts transactions (OADA/C)? Amounts entered into OAD are reflected in the Position Detail of Salaries and Benefits section of the Exhibit D-3A. (See page 95 of the LBR Instructions.)	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
7.8	Does the issue narrative include the Consensus Estimating Conference forecast, where appropriate?	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A
7.9	Does the issue narrative reference the specific county(ies) where applicable?	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
7.10	Do the 160XXX0 issues reflect budget amendments that have been approved (or in the process of being approved) and that have a recurring impact (including Lump Sums)? Have the approved budget amendments been entered in Column A18 as instructed in Memo #21-001?	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A

Action	Program or Service (Budget Entity Codes)									
	71150200	71150300	71550100	71600100	71600200	71600300	71700100	71700200	71800100	71800200
7.11 When appropriate are there any 160XXX0 issues included to delete positions placed in reserve in the LAS/PBS Position and Rate Ledger (e.g. unfunded grants)? Note: Lump sum appropriations not yet allocated should <u>not</u> be deleted. (PLRR, PLMO)	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A
7.12 Does the issue narrative include plans to satisfy additional space requirements when requesting additional positions?	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A
7.13 Has the agency included a 160XXX0 issue and 210XXXX and 260XXX0 issues as required for lump sum distributions?	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A
7.14 Do the amounts reflect appropriate FSI assignments?	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
7.15 Are the 33XXXX0 issues negative amounts only and do not restore nonrecurring cuts from a prior year or fund any issues that net to a positive or zero amount? Check D-3A issues 33XXXX0 - a unique issue should be used for issues that net to zero or a positive amount.	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
7.16 Do the issue codes relating to special <i>salary and benefits</i> issues (e.g., position reclassification, pay grade adjustment, overtime/on-call pay, etc.) have an "A" in the fifth position of the issue code (XXXXAXX) and are they self-contained (not combined with other issues)? (See pages 27 and 90 of the LBR Instructions.)	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A
7.17 Do the issues relating to <i>Information Technology (IT)</i> have a "C" in the sixth position of the issue code (36XXXXCX) and are the correct issue codes used (361XXC0, 362XXC0, 363XXC0, 24010C0, 30010C0, 33011C0, 160E470, or 160E480)?	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
7.18 Are the issues relating to <i>major audit findings and recommendations</i> properly coded (4A0XXX0, 4B0XXX0)?	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A
7.19 Does the issue narrative identify the strategy or strategies in the Five Year Statewide Strategic Plan for Economic Development?	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
AUDIT:										
7.20 Does the General Revenue for 160XXXX (Adjustments to Current Year Expenditures) issues net to zero? (GENR, LBR1)	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
7.21 Does the General Revenue for 180XXXX (Intra-Agency Reorganizations) issues net to zero? (GENR, LBR2)	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A
7.22 Does the General Revenue for 200XXXX (Estimated Expenditures Realignment) issues net to zero? (GENR, LBR3)	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y

Action	Program or Service (Budget Entity Codes)									
	71150200	71150300	71550100	71600100	71600200	71600300	71700100	71700200	71800100	71800200
7.23 Have FCO appropriations been entered into the nonrecurring column (A04)? (GENR, LBR4 - Report should print "No Records Selected For Reporting" or a listing of D-3A issue(s) assigned to Debt Service (IOE N) or in some cases State Capital Outlay - Public Education Capital Outlay (IOE L))	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
7.24 Has narrative been entered for all issues requested by the agency? Agencies do not need to include narrative for startup issues (1001000, 2103XXX, etc.) that were not input by the agency. (NAAR, BSNR)	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
7.25 Has the agency entered annualization issues (260XXX0) for any issue that was partially funded in Fiscal Year 2020-21? Review Column G66 to determine whether any incremental amounts are needed to fully fund an issue that was initially appropriated in Fiscal Year 2020-21. Do not add annualization issues for pay and benefit distribution issues, as those annualization issues (26AXXXX) have already been added to A03.	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
TIP Salaries and Benefits amounts entered using the OADA/C transactions must be thoroughly justified in the D-3A issue narrative. Agencies can run OADA/OADR from STAM to identify the amounts entered into OAD and ensure these entries have been thoroughly explained in the D-3A issue narrative.										
TIP The issue narrative must completely and thoroughly explain and justify each D-3A issue. Agencies must ensure it provides the information necessary for the OPB and legislative analysts to have a complete understanding of the issue submitted. Thoroughly review pages 66 through 70 of the LBR Instructions.										
TIP Check BAPS to verify status of budget amendments. Check for reapprovals not picked up in the General Appropriations Act. Verify that Lump Sum appropriations in Column A02 do not appear in Column A03. Review budget amendments to verify that 160XXX0 issue amounts correspond accurately and net to zero for General Revenue funds.										
TIP If an agency is receiving federal funds from another agency the FSI should = 9 (Transfer - Recipient of Federal Funds). The agency that originally receives the funds directly from the federal agency should use FSI = 3 (Federal Funds).										

Action	Program or Service (Budget Entity Codes)									
	71150200	71150300	71550100	71600100	71600200	71600300	71700100	71700200	71800100	71800200

TIP If an appropriation made in the FY 2020-21 General Appropriations Act duplicates an appropriation made in substantive legislation, the agency must create a unique deduct nonrecurring issue to eliminate the duplicated appropriation. Normally this is taken care of through line item veto.

8. SCHEDULE I & RELATED DOCUMENTS (SC1R, SC1 - Budget Entity Level or SC1R, SC1D - Department Level) (Required to be posted to the Florida Fiscal Portal)

8.1	Has a separate department level Schedule I and supporting documents package been submitted by the agency?	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
8.2	Has a Schedule I and Schedule IB been completed in LAS/PBS for each operating trust fund?	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
8.3	Have the appropriate Schedule I supporting documents been included for the trust funds (Schedule IA, Schedule IC, and Reconciliation to Trial Balance)?	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
8.4	Have the Examination of Regulatory Fees Part I and Part II forms been included for the applicable regulatory programs?	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA
8.5	Have the required detailed narratives been provided (5% trust fund reserve narrative; method for computing the distribution of cost for general management and administrative services narrative; adjustments narrative; revenue estimating methodology narrative; fixed capital outlay adjustment narrative)?	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
8.6	Has the Inter-Agency Transfers Reported on Schedule I form been included as applicable for transfers totaling \$100,000 or more for the fiscal year?	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
8.7	If the agency is scheduled for the annual trust fund review this year, have the Schedule ID and applicable draft legislation been included for recreation, modification or termination of existing trust funds?	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
8.8	If the agency is scheduled for the annual trust fund review this year, have the necessary trust funds been requested for creation pursuant to section 215.32(2)(b), Florida Statutes - including the Schedule ID and applicable legislation?	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A
8.9	Are the revenue codes correct? In the case of federal revenues, has the agency appropriately identified direct versus indirect receipts (object codes 000700, 000750, 000799, 001510 and 001599)? For non-grant federal revenues, is the correct revenue code identified (codes 000504, 000119, 001270, 001870, 001970)?	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
8.10	Are the statutory authority references correct?	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y

Action	Program or Service (Budget Entity Codes)									
	71150200	71150300	71550100	71600100	71600200	71600300	71700100	71700200	71800100	71800200
8.11 Are the General Revenue Service Charge percentage rates used for each revenue source correct? (Refer to section 215.20, Florida Statutes, for appropriate General Revenue Service Charge percentage rates.)	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
8.12 Is this an accurate representation of revenues based on the most recent Consensus Estimating Conference forecasts?	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A
8.13 If there is no Consensus Estimating Conference forecast available, do the revenue estimates appear to be reasonable?	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
8.14 Are the federal funds revenues reported in Section I broken out by individual grant? Are the correct CFDA codes used?	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
8.15 Are anticipated grants included and based on the state fiscal year (rather than federal fiscal year)?	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
8.16 Are the Schedule I revenues consistent with the FSI's reported in the Exhibit D-3A?	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
8.17 If applicable, are nonrecurring revenues entered into Column A04?	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
8.18 Has the agency certified the revenue estimates in columns A02 and A03 to be the latest and most accurate available? Does the certification include a statement that the agency will notify OPB of any significant changes in revenue estimates that occur prior to the Governor's Budget Recommendations being issued?	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
8.19 Is a 5% trust fund reserve reflected in Section II? If not, is sufficient justification provided for exemption? Are the additional narrative requirements provided?	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
8.20 Are appropriate General Revenue Service Charge nonoperating amounts included in Section II?	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
8.21 Are nonoperating expenditures to other budget entities/departments cross-referenced accurately?	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
8.22 Do transfers balance between funds (within the agency as well as between agencies)? (See also 8.6 for required transfer confirmation of amounts totaling \$100,000 or more.)	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
8.23 Are nonoperating expenditures recorded in Section II and adjustments recorded in Section III?	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
8.24 Are prior year September operating reversions appropriately shown in column A01, Section III?	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y

Action	Program or Service (Budget Entity Codes)									
	71150200	71150300	71550100	71600100	71600200	71600300	71700100	71700200	71800100	71800200
8.25 Are current year September operating reversions (if available) appropriately shown in column A02, Section III?	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
8.26 Does the Schedule IC properly reflect the unreserved fund balance for each trust fund as defined by the LBR Instructions, and is it reconciled to the agency accounting records?	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
8.27 Has the agency properly accounted for continuing appropriations (category 13XXXX) in column A01, Section III?	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A
8.28 Does Column A01 of the Schedule I accurately represent the actual prior year accounting data as reflected in the agency accounting records, and is it provided in sufficient detail for analysis?	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
8.29 Does Line I of Column A01 (Schedule I) equal Line K of the Schedule IC?	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
AUDITS:										
8.30 Is Line I a positive number? (If not, the agency must adjust the budget request to eliminate the deficit).	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
8.31 Is the June 30 Adjusted Unreserved Fund Balance (Line I) equal to the July 1 Unreserved Fund Balance (Line A) of the following year? If a Schedule IB was prepared, do the totals agree with the Schedule I, Line I? (SC1R, SC1A - Report should print "No Discrepancies Exist For This Report")	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
8.32 Has a Department Level Reconciliation been provided for each trust fund and does Line A of the Schedule I equal the CFO amount? If not, the agency must correct Line A. (SC1R, DEPT)	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
8.33 Has a Schedule IB been provided for ALL trust funds having an unreserved fund balance in columns A01, A02 and/or A03, and if so, does each column's total agree with line I of the Schedule I?	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
8.34 Have A/R been properly analyzed and any allowances for doubtful accounts been properly recorded on the Schedule IC?	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
TIP The Schedule I is the most reliable source of data concerning the trust funds. It is very important that this schedule is as accurate as possible!										
TIP Determine if the agency is scheduled for trust fund review. (See page 132 of the LBR Instructions.) Transaction DFTR in LAS/PBS is also available and provides an LBR review date for each trust fund.										

Action	Program or Service (Budget Entity Codes)									
	71150200	71150300	71550100	71600100	71600200	71600300	71700100	71700200	71800100	71800200
TIP Review the unreserved fund balances and compare revenue totals to expenditure totals to determine and understand the trust fund status.										
TIP Typically nonoperating expenditures and revenues should not be a negative number. Any negative numbers must be fully justified.										
9. SCHEDULE II (PSCR, SC2)										
AUDIT:										
9.1 Is the pay grade minimum for salary rate utilized for positions in segments 2 and 3? (BRAR, BRAA - Report should print "No Records Selected For This Request") Note: Amounts other than the pay grade minimum should be fully justified in the D-3A issue narrative. (See <i>Base Rate Audit</i> on page 163 of the LBR Instructions.)	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A
10. SCHEDULE III (PSCR, SC3)										
10.1 Is the appropriate lapse amount applied? (See page 92 of the LBR Instructions.)	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A
10.2 Are amounts in <i>Other Salary Amount</i> appropriate and fully justified? (See page 95 of the LBR Instructions for appropriate use of the OAD transaction.) Use OADI or OADR to identify agency other salary amounts requested.	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
11. SCHEDULE IV (EADR, SC4)										
11.1 Are the correct Information Technology (IT) issue codes used?	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
TIP If IT issues are not coded (with "C" in 6th position or within a program component of 1603000000), they will not appear in the Schedule IV.										
12. SCHEDULE VIIIA (EADR, SC8A)										
12.1 Is there only one #1 priority, one #2 priority, one #3 priority, etc. reported on the Schedule VIII-A? Are the priority narrative explanations adequate? Note: FCO issues can be included in the priority listing.	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
13. SCHEDULE VIIIB-1 (EADR, S8B1)										
13.1 Do the reductions comply with the instructions provided on pages 100 through 103 of the LBR Instructions regarding an 8.5% reduction in General Revenue and Trust Funds, including the verification that the 33BXXX0 issue has NOT been used? Verify that excluded appropriation categories and funds were not used (e.g. funds with FSI 3 and 9, etc.)	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y

Action	Program or Service (Budget Entity Codes)									
	71150200	71150300	71550100	71600100	71600200	71600300	71700100	71700200	71800100	71800200
TIP If all or a portion of an issue is intended to be reduced on a nonrecurring basis, include the total reduction amount in Column A91 and the nonrecurring portion in Column A92.										
14. SCHEDULE VIII B-2 (EADR, S8B2) (Required to be posted to the Florida Fiscal Portal)										
14.1 Do the reductions comply with the instructions provided on pages 104 through 107 of the LBR Instructions regarding a 10% reduction in General Revenue and Trust Funds, including the verification that the 33BXXX0 issue has NOT been used? Verify that excluded appropriation categories and funds were not used (e.g. funds with FSI 3 and 9, etc.)	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
TIP Compare the debt service amount requested (IOE N or other IOE used for debt service) with the debt service need included in the Schedule VI: Detail of Debt Service, to determine whether any debt has been retired and may be reduced.										
TIP If all or a portion of an issue is intended to be reduced on a nonrecurring basis, in the absence of a nonrecurring column, include that intent in narrative.										
15. SCHEDULE VIII C (EADR, S8C) (This Schedule is optional, but if included it is required to be posted to the Florida Fiscal Portal)										
15.1 Does the schedule display reprioritization issues that are each comprised of two unique issues - a deduct component and an add-back component which net to zero at the department level?	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A
15.2 Are the priority narrative explanations adequate and do they follow the guidelines on pages 108 through 110 of the LBR instructions?	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A
15.3 Does the issue narrative in A6 address the following: Does the state have the authority to implement the reprioritization issues independent of other entities (federal and local governments, private donors, etc.)? Are the reprioritization issues an allowable use of the recommended funding source?	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A
AUDIT:										
15.4 Do the issues net to zero at the department level? (GENR, LBR5)	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A
16. SCHEDULE XI (UCSR, SCXI) (LAS/PBS Web - see pages 111-115 of the LBR Instructions for detailed instructions) (Required to be posted to the Florida Fiscal Portal in Manual Documents)										

Action	Program or Service (Budget Entity Codes)									
	71150200	71150300	71550100	71600100	71600200	71600300	71700100	71700200	71800100	71800200
16.1 Agencies are required to generate this spreadsheet via the LAS/PBS Web. The Final Excel version no longer has to be submitted to OPB for inclusion on the Governor's Florida Performs Website. (Note: Pursuant to section 216.023(4) (b), Florida Statutes, the Legislature can reduce the funding level for any agency that does not provide this information.)										
16.2 Do the PDF files uploaded to the Florida Fiscal Portal for the LRPP and LBR match?	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
AUDITS INCLUDED IN THE SCHEDULE XI REPORT:										
16.3 Does the FY 2019-20 Actual (prior year) Expenditures in Column A36 reconcile to Column A01? (GENR, ACT1)	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
16.4 None of the executive direction, administrative support and information technology statewide activities (ACT0010 thru ACT0490) have output standards (Record Type 5)? (Audit #1 should print "No Activities Found")	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
16.5 Does the Fixed Capital Outlay (FCO) statewide activity (ACT0210) only contain 08XXXX or 14XXXX appropriation categories? (Audit #2 should print "No Operating Categories Found")	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
16.6 Has the agency provided the necessary standard (Record Type 5) for all activities which <u>should</u> appear in Section II? (Note: The activities listed in Audit #3 do not have an associated output standard. In addition, the activities were not identified as a Transfer to a State Agency, as Aid to Local Government, or a Payment of Pensions, Benefits and Claims. Activities listed here should represent transfers/pass-throughs that are not represented by those above or administrative costs that are unique to the agency and are not appropriate to be allocated to all other activities.)	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
16.7 Does Section I (Final Budget for Agency) and Section III (Total Budget for Agency) equal? (Audit #4 should print "No Discrepancies Found")	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
TIP If Section I and Section III have a small difference, it may be due to rounding and therefore will be acceptable.										
17. MANUALLY PREPARED EXHIBITS & SCHEDULES (Required to be posted to the Florida Fiscal Portal)										
17.1 Do exhibits and schedules comply with LBR Instructions (pages 116 through 160 of the LBR Instructions), and are they accurate and complete?	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
17.2 Does manual exhibits tie to LAS/PBS where applicable?	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y

Action	Program or Service (Budget Entity Codes)									
	71150200	71150300	71550100	71600100	71600200	71600300	71700100	71700200	71800100	71800200
17.3 Are agency organization charts (Schedule X) provided and at the appropriate level of detail?	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
17.4 Does the LBR include a separate Schedule IV-B for each IT project over \$1 million (see page 136 of the LBR instructions for exceptions to this rule)? Have all IV-Bs been emailed to: IT@LASPBS.STATE.FL.US?	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
17.5 Are all forms relating to Fixed Capital Outlay (FCO) funding requests submitted in the proper form, including a Truth in Bonding statement (if applicable) ?	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
AUDITS - GENERAL INFORMATION										
TIP Review <i>Section 6: Audits</i> of the LBR Instructions (pages 162-164) for a list of audits and their descriptions.										
TIP Reorganizations may cause audit errors. Agencies must indicate that these errors are due to an agency reorganization to justify the audit error.										
18. CAPITAL IMPROVEMENTS PROGRAM (CIP) (Required to be posted to the Florida Fiscal Portal)										
18.1 Are the CIP-2, CIP-3, CIP-A and CIP-B forms included?	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
18.2 Are the CIP-4 and CIP-5 forms submitted when applicable (see CIP Instructions)?	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
18.3 Do all CIP forms comply with CIP Instructions where applicable (see CIP Instructions)?	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
18.4 Does the agency request include 5 year projections (Columns A03, A06, A07, A08 and A09)?	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
18.5 Are the appropriate counties identified in the narrative?	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
18.6 Has the CIP-2 form (Exhibit B) been modified to include the agency priority for each project and the modified form saved as a PDF document?	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
TIP Requests for Fixed Capital Outlay appropriations which are Grants and Aids to Local Governments and Non-Profit Organizations must use the Grants and Aids to Local Governments and Non-Profit Organizations - Fixed Capital Outlay major appropriation category (140XXX) and include the sub-title "Grants and Aids". These appropriations utilize a CIP-B form as justification.										
19. FLORIDA FISCAL PORTAL										
19.1 Have all files been assembled correctly and posted to the Florida Fiscal Portal as outlined in the Florida Fiscal Portal Submittal Process?	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y
